Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

When Buying a Home

insist that the house is piped through-out for gas so you can take advantage of the ease and economy of cooking, heating water and ironing with gas.

And a Baseboard Gas Outlet in each room is just the thing for connecting floor or table lamps and also provides a ready means for using gas heating stoves in the early Fall and late Spring when it isn't practical to have the house heating system going all day and night.

Without energetic effort a man must remain in a rut and can never expect to share with his hustling, up-to-date competitor. Quoting the words of a gifted scribe: "Health attends the man who acts. Wisdom guides him. Hope frees him. Joy helps him. Power moves him. Progress marks him. Fame follows him. Wealth rewards him. Love chooses him. Fate obeys him. God blesses him. Immortality crowns him."

Do not fear advertising as an expense, but court it as an asset, for that is really what it is—a value unseen, but determined from results.

No one suffers from a mean disposition like the fellow who has one.

SURE.

Stick to your work, forget the mob.

Avoid the discontented throng;

For, if you're always on the job

Success is sure to come along.

He would save the commission of the architect, but ruin the store.

ware College, Newark, Del. Brick and marble, fireproof construction, 2 and 3 stories, 30x130 feet, slate roof, steam heating, electric lighting, tile and marble work, metal lath, dumb waiter. Contract for brick, reinforced concrete work and mill work awarded to James H. Wells, Otis Building, Philadelphia.

LOCATION OF ROOMS IN HOUSE IMPORTANT.

The distribution and location of the various rooms in a detached dwelling should receive consideration in their relation to exposure and sunlight, according to a bulletin issued by the Real Estate Board of New York City.

A western or southwestern exposure is not good for a dining room, as the afternoon sun heats it unreasonably in summer, the bulletin says: The outlook should be preferably to the south or east, or to the north as a last resort, but never to the west unless unavoidable.

The living room, which should be bright and cheerful, should face the east. The morning room, drawing room or reception room, usually little used, can face to the north or west.

The library must be dry and may face the east. The morning room should face east or southeast. Kitchens require cool locations where possible and the northerly exposure is therefore best.

Bedrooms should have the utmost possible amount of sunlight, as it is materially conducive to health, and in building the positions of the beds should be indicated on the plans. You should not have them in a direct draught between doors or windows, or windows and fireplaces, nor should the eyes of the sleeper face the light on awakening; neither should the side of the bed be placed against the wall. Every bed room should have an open fireplace or a ventilating flue.

Bath rooms and plumbing on different floors should be so placed over one another as to give direct simple drainage. Ceilings should be from ten to eleven feet from the floor in the clear and the windows are often best designed when grouped, as inside wall space is essential.

Windows that are too large and too many make the house hot in summer and cold in winter, but this may be remedied in part by using plate glass.

There never was, never will be, a better medium for the man who has something to sell to a given class of buyers than the trade paper whose circulation is limited to that class. Newspapers with their swollen circulations strike at best but a chance target here and there. The trade paper carries your rifle fire to targets exclusively. You can't miss,—if your ammunition's right.

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

RUSHING CANTONMENT WORK.

To facilitate the movement and prompt delivery of materials for the construction of the Army cantonments, the Railroads' War Board has assigned C. E. Denney, assistant to the president of the Nickel Plate Railroad, to the Quartermaster's Department in Washington. During the period of construction Mr. Denney will make headquarters in the office of Colonel Littell, where he will keep in touch with all phases of the construction work and furnish advance information to the Commission on Car Service of the Railroads' War Board concerning the Government's orders and the number of cars required to fill them.

There are sixteen army cantonments and sixteen guard camps. All the material for the cantonments will take about 64,000 freight cars. The camps will require about 40,000 carloads, all of which must be moved promptly and without delaying in any way the usual traffic of the railroads.

As a safeguard against delay in deliveries of cars an experienced railroad man has been assigned as a general agent at each cantonment to work in co-operation with the construction quartermaster there. These agents will make daily reports on the number of carloads of materials received, the number of cars unloaded, and the number left on hand for unloading.

What this team work is accomplishing is already apparent. Within thirty days from the date that the Government placed its first orders for cantonment materials the railroads had delivered more than 12,000 carloads of lumber and other building supplies to the sixteen National Army cantonments that are to house the first division of men called to the colors by the draft.

Additional trains, loaded to capacity with lumber, brick, piping, wire, poles, water mains, and all the other materials needed to construct cities capable of accommodating 40,000 inhabitants are arriving daily.

An indication of the speed with which materials are being moved is contained in a report from the cantonment at Louisville, Ky. Administration buildings there were built from lumber cut in a Mississippi pine forest the week before. The trees were felled on Saturday, kindred on Sunday, loaded on freight cars Monday, and delivered at the Louisville site on Wednesday morning. An army of energetic carpenters completed the transformation from forest to Government building just one week from the day the trees had been felled.

To connect the cantonments with the nearest railroad line, and to supply facilities for the local movement of materials during the construction work, many miles of extra trackage have been laid at each site at the expense of the railroads.

The prosperous, the great, the wise,
You may have noticed, advertise!

REAL GOLD UNMINED.

"I am here as the self-appointed representative of 900 trade and technical publications printed in the United States and circulated wherever the English language is spoken. How important they are in their relation to advertising may be understood when I tell you that they carry, in the aggregate, advertising to the amount of at least \$25,000,000 a year—one-eighth of all the advertising money that is spent for all forms of publicity in the country—and that these advertisers "stick" year after year because it pays them to stick.

I have bought, sold and written all kinds of advertising—pasted and printed, indoor and outdoor, consumer and dealer, technical and commercial—and I have reached the conclusion that there is more real gold as yet unmined in the trade press field than in any other field of advertising endeavor."—Extract from address by R. R. Shuman, before the annual convention of the Associated Advertising Clubs at Omaha.

Few persons appreciate the enormous cost of advertising a popular product before it obtains popularity. One of the most successful advertisers in the country, whose income reaches hundreds of thousands of dollars annually, told *Leslie's Weekly* that he wasted at least a quarter of a million dollars "before he learned the advertising game." He estimates that he spent this amount on circulars, gaudy lithographs, sign boards, and street car advertising, out of which he received so little benefit, as far as he could trace it, that he regarded the expenditure as money pretty nearly wasted.

BE PROGRESSIVE.

The best is the cheapest on both ends and in the center. Improvement does not impose a tax, as efficiency pays for itself. The penny scripper cannot possibly hold out against as much as the gloomy, ugly, and unobliging progress. The best equipped shop never asks establishment. Be progressive.

The trouble with some advertising is that it is like the conversation of certain people—it never says anything.—"Novelty News."

Permits for New Buildings

O is the abbreviation for owner. C is for contractor.

Philadelphia

Garage, 5636 Chestnut street, \$600. E. Schuster (O), 5561 Chestnut street. J. Schulman (C), 1111 Bainbridge street. Brick, 1 story, 16x26 feet, slag roof.

As The Editor Sees It

IT is becoming apparent, as the situation created by war conditions tightens perceptibly, that something will have to be done to ease the risk involved in contract bidding. Let me try to make plain at just what I am driving. Under normal conditions the contractor puts in a bid to do a given piece of work in a given period of time. For failure to complete the work within the specified period there is provided a scale of penalties. No allowance is made for fluctuations in the price of materials, the cost of labor, or difficulty in securing deliveries. The bidder assumes all of these risks. Normally he can afford to do this. But the times now facing us are abnormal.

Labor is high and scarce and daily growing higher and scarcer. Common labor is being advertised for in many lines at 50 cents an hour. Hatchet-and-saw men are advertised for at 62½ cents an hour with time-and-half-time for Sundays. If the war continues for any considerable length of time no man can say to what wildly absurd figures the market will soar, whether for skilled or unskilled help.

* * *

MATERIAL costs are jumping, in certain lines, like a Texas jack-rabbit. Materials are one price to-day, another to-morrow and still another the day after. The tendency is up, not down—steadily up. Deliveries are so uncertain that men facing big work are well-nigh distracted to secure

a sufficient quantity of material to keep their forces moving. One wage-scale obtains to-day, another to-morrow. There is no security at any point. All is risk and uncertainty.

* * *

NOW the point I set out to make is this—whether under the conditions there should not be devised a form of contract, the terms of which will permit an equitable degree of latitude to the bidder facing a perilous and altogether unprecedented situation.

Two of the biggest contracting firms in Philadelphia are hesitating as I write, about accepting contracts for millions of dollars' worth of work on Philadelphia's projected new subway because of the failure of the contracts to make allowance for contingent present-day conditions.

Can any reasonable person blame them, in the circumstances?

* * *

WE had the spectacle, only recently of a bidder on wood block paving work being forced to buy block, at a premium, from a competing firm because of the inability of wood-block manufacturers to meet the demand which exists for that material. This same condition is likely, as matters now stand, to assert itself in the case of any one of a dozen materials used in building.

What protection exists for the bidder

caught thus between the upper and the nether mill-stones?

The ideal condition in a situation such as that now facing the country would be the cost-plus-a-fixed-sum or "percentage" system. All of the government work now being awarded is being placed under this principle. How this system works out is explained by Col. I. W. Littel of the Quartermaster's Department of the Army who is in charge of the work of building the new army cantonments:

"The fees vary from 10 per cent. on small contracts of \$100,000 or less to 6 per cent. on contracts of more than \$3,500,000, with a final upset limit of \$250,000. The fees in all cases cover both profit and overhead expense. They were fixed upon by the department acting with the assistance of the Emergency Construction Committee and other civilian advisers.

* * *

IN deciding on the cantonment contracts we have had to consider three main points of practically equal importance," Col. Littell said. "The first has been the absolute necessity of speed; the second, proper construction, including sanitation and communication and transportation facilities; the third, economy. Taking all three into consideration, and also the fact that time will not permit the completion of drawings and specifications which would be necessary in order to ask for competitive bids before the work must be started, the Quar-

KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

termaster Corps, acting in conjunction with the emergency construction committee, decided to make contracts on the percentage, or cost plus basis, at the same time using all possible safeguards in the shape of guaranties from the contractors as to their capacity and integrity.

"The profit system has been decided on only after weeks of study to find a basis for the fees which would assure the country of the highest grade of work from the contractors and at the same time prevent extravagance through the payment of excessive profits. It is a pleasure to pay tribute to the loyalty and patriotism of the great majority of contractors who have come here to discuss the question with us. With a few exceptions they have acquiesced willingly in our contention that the profits must be kept down to the lowest level consistent with high-grade work. Some firms have offered to do the work on a cost basis, but we have considered this an unwise policy both economically and nationally. The utmost speed and efficiency must be developed in these and future building jobs for the Government, and the acceptance of offers of free service might easily disrupt the high-grade contracting firms best qualified to do the work effectively.

"Steps are being taken by committees also to safeguard the Government from paying unreasonable prices for materials.

* * *

THIS careful graded scheme will, of course, not be satisfactory to some contractors, and we have naturally received many protests against the low fees. It is a satisfaction to know, however, that the great majority of the reputable firms have assented loyally and patriotically to the Government's determination to take radical precautions against excessive profits. The criticisms of the few are perhaps the best evidence we could have of the care the Government is taking in its plans for the cantonments."

If the cost of the work is under \$100,000, a fee of 10 per cent. of such cost.

If the cost of the work is over \$100,000 and under \$125,000, a fee of \$10,000.

If the cost of the work is over \$125,000 and under \$250,000, a fee of 8 per cent. of such cost.

If the cost of the work is over \$250,000 and under \$266,666.67, a fee of \$20,000.

If the cost of the work is over \$266,666.67 and under \$500,000, a fee of 7½ per cent. of such cost.

If the cost of the work is over \$500,000 and under \$535,714.29, a fee of \$37,500.

If the cost of the work is over \$535,714.29 and under \$3,000,000, a fee of 7 per cent. of such cost.

If the cost of the work is over \$3,000,000 and under \$3,500,000, a fee of \$210,000.

If the cost of the work is over \$3,300,000, a fee of 6 per cent. of such cost.

The total fee to the contractor hereunder shall in no event exceed the sum of \$2,500,000, anything in this agreement to the contrary notwithstanding.

* * *

HERE, we have a clear, lucid and easily-grasped statement of the method being followed by the government. This method would, it should be needless to say, not adapt itself to private work generally. But it is conceivable that using this method as the basis or starting-point it ought to be possible to evolve a system whereunder contract work, of a private nature, may be undertaken by the average bidder without unnecessary and prohibitive risk.

* * *

I WAS very much taken with a letter signed "Builder," that appeared in a New York magazine, dealing with the need that exists for the "get-together" sentiment among men associated with present-day building:

"Throughout the building trades there has been considerable discussion in reference to the expected boom in building, but up to the present time there have been no signs that activity along this line is anything more tangible than in the minds of a certain group of individuals or concerns who hope to profit largely by increased business.

"True, there is a demand for many additional buildings. The shortage applies to almost every type of structure. But who, other than investors of independent means, are able to compete profitably with the excessive prices now demanded for building materials and also the other deterrent influences that have held up operations for many months.

"Where is to be obtained the necessary labor to erect these structures when there is the constant cry 'scarcity of labor?' To what extent are the loaning institutions willing to come forward to make it easier for the prospective builder to start his contemplated operation?

"All of these factors, and doubtless additional ones, enter in an important manner into the present building situation and, unless some means of co-operation between the interests involved is speedily perfected, the present unsatisfactory condition in the building industry will continue indefinitely. On the other hand the condition could be measurably improved were the interests represented to get together in a concerted attempt to solve these difficulties.

"But little can be attained by individual effort in these times. The combined efforts of all those interested in furthering the prosperity of the building indus-

try are needed now more than ever before and if such co-operation is possible, I am sure that the end will justify the means."

* * *

THERE are several suggestions in this practical little note of value in the present situation. One that appeals to me particularly is the query the writer puts, touching to what extent the loaning institutions are prepared to come forward to make it easier for the prospective builder to start contemplated operations."

We hear a considerable babble these days of the patriotic enthusiasm of the big financial institutions. Here is an opportunity to make some of that babble practicable and of concrete value. There is no scarcity of money seeking investment. The question seems to be to what extent the investor is prepared to make concessions due the builder in the face of an altogether novel and unforeseen conveyance of circumstances.

The answer to this question would be a practical order of patriotism. It would help the building trades, the investor and the nation. It would go far toward restoring confidence and tend to stabilize the building industry generally.

THE DIFFERENCE BETWEEN AN ENGINE HORSE POWER AND A BOILER HORSE POWER.

There is a decided difference between an ordinary horse power and a boiler horse power. A boiler horse power is more than 13 times as great as an engine horse power. The definition of a boiler horse power is given as "the amount of heat required to evaporate 34.5 pounds of water from and at 212 degrees F. per hour." It has been figured that this amount of heat is equal to 33,479 B. T. U. per hour.

An ordinary engine horse power is equal to 33,000 foot-pounds per minute. Since it takes 778 foot-pounds to make 1 B. T. U., one can easily figure that an ordinary horse power is equal to 2,546 B. T. U. per hour.

We are now ready to find the relation by dividing as follows: 33,479 divided by 2,546 equals 13.149. Roughly speaking, therefore, the engine horse power is only one-thirteenth as great as the boiler horse power.—W. F. Schaphorst.

DO IT NOW.

All we have is just this minute

Do It Now.

Find your duty and begin it

Do It Now.

Surely you're not always going

To be "a going to be," and knowing

You must sometime make a showing.

Do It Now.

EDITORIAL NOTES

According to the impressions of the last few days, there is evidence of a substantially improved feeling throughout the building and allied industries, engendered no doubt by the noticeably bettered building situation. During the latter part of last week and the fore part of the current week there have been indications that denote a start of the long hoped for building movement, and although the proportions of the movement are not yet large, they certainly do allow of the prediction that the autumn months will be a period of exceptional promise.

A course of fifteen lectures on international trade is to be given to the employees of the Vulcan Steel Products Company, 120 Broadway, by Dr. Roy P. MacElwee, head of the department of physics of the College of the City of New York. An additional course dealing with the iron and steel industry in detail is to follow the course given by Dr. MacElwee.

* * *

Association of Iron and Steel Electrical Engineers will hold its eleventh annual convention at the Bellevue-Stratford Hotel, Philadelphia, Pa., September 10-14, inclusive. Wednesday, September 12, will be devoted entirely to a patriotic program, with addresses to be made by army and navy engineers on matters of vital importance to the industries with which the association is identified.

* * *

Builders and investors have been anxiously awaiting for favorable action by the Government in regard to the stabilization of the material situation. There is no doubt but that many important operations are being held in abeyance pending a settlement of the structural steel supply and the regulation of prices both for Governmental and private consumption. Other building commodities are also involved in the investigation, and the condition makes it exceedingly difficult for prospective builders to definitely formulate their plans for future operations.

* * *

De Barros Moreira, formerly general representative in Brazil of the United States Steel Products Company, has been appointed agency division manager of the Vulcan Steel Products Company, of 120 Broadway, New York. Mr. Moreira was a member of the Pan-American Conference in 1910, a delegate to the International Chamber of Commerce and a former president of the American Manufacturers' Export Association.

* * *

A war inventions committee has been form-

ed by the Engineering Council as follows: H. W. Buck, consulting engineering, New York; Prof. A. M. Greene, Jr., Rensselaer Polytechnic Institute, Troy, N. Y., and E. B. Kirby. The committee is to co-operate with the Naval Advisory Board and other departments at Washington, if desired, in the promulgation to engineers of war problems now before the Government.

* * *

National Exposition of Chemical Industries will be held in the Grand Central Palace, New York, in the week beginning September 24. Addresses will be made by Dr. Charles H. Herty, chairman of the Advisory Committee of the Exposition and editor of the "Journal of Industrial and Engineering Chemistry; Professor Julius Stieglitz, president of the American Chemical Society; Dr. Colin G. Fink, president of the American Electro-Chemical Society; Dr. G. W. Thompson, president of the American Institute of Chemical Engineers; W. S. Kies, vice-president of the National City Bank, and others.

* * *

When the Federal authorities announce the decision in regard to the control of output and the regulation of the prices to be charged for the various commodities that are now under investigation there is a prediction that the construction of new buildings will be stimulated to a marked degree. At present there is a hesitancy to commence operations on account of the uncertainty of Governmental action, but once announcement is made, be it favorable or unfavorable, the trade will know exactly how to figure and a revival of structural work is almost sure to immediately follow because of the firm demand for new structures that exists in many parts of the country. The present scarcity of accommodations for living purposes, as well as manufacturing and general business, is not only a local problem, but one that extends to many other large cities and towns throughout the nation. This demand must be catered to and to accomplish this end new structures are a vital economic necessity.

* * *

George Giffault, formerly with Fitz, Dana & Brown, metals, has become associated with the Baltimore Copper Smelting and Rolling Company at New York. The New York office for the sheet copper department has been moved to 128-130 Fourth avenue, near Union Square, and a stock of the products of the American Smelting and Refining Company is carried. W. C. Dickey is New York manager.

* * *

Warren Webster & Co., Camden, N. J., announce the removal of their Atlantic City branch office to 429 Guarantee Trust Building. Sidney B. Strouse is the district manager.

* * *

Westinghouse Electric and Manufacturing

Company, East Pittsburgh, Pa., has received an order for furnishing the electrical equipment for the new Pennsylvania Hotel, now being built at Seventh avenue and Thirty-third street, New York. This hotel, when completed, will be the largest in the world, containing 2,200 rooms, each with a bath. It is being built by the Pennsylvania Railroad and will be operated under the Statler management.

* * *

Walworth Manufacturing Company, Boston, Mass., it is announced, has purchased the Kewanee plant of the National Tube Company at Kewanee, Ill., the sale being effective July 1. The plant covers an area of 58 acres and employs 2,400 men. All of the company's valves, fittings, etc., for the Western trade will be made hereafter at the Kewanee plant, which will be in charge of Charles A. Olson, formerly manager of the Walworth Company's works in Boston. Shirley R. Mitchell, formerly of the company's New York branch, will have charge of the sales of the Kewanee plant products.

* * *

In general, the building material markets have been quiet throughout the past week. Sales of building materials for immediate use in the erection of buildings are comparatively light, but there are inquiries for future deliveries that denote an undercurrent of activity that properly handled and cultivated should, in a short time, develop into a building season of no mean proportions. Several leading architects report that they have important projects on the boards and that their clients are expecting to commence operations as soon as the conditions warrant. The consensus of opinion is that before long the general building situation will have improved to an extent that the start of new projects will become a daily occurrence.

* * *

An emergency call has gone forth from the Chamber of Commerce of the United States to the business men of the country for a great war convention to be held at Atlantic City, September 17-21. It is expected to be the largest gathering of business men ever held and will show to the world that American business recognizes its duty in this crisis and stands solidly behind the Government in war. Incidentally the object of the meeting will be to encourage our Allies and strike fear into the heart of the enemy.

* * *

Conditions in the cement market are most satisfactory, with prices firmly established at the \$2.12 level and a demand for the material that from all quarters indicates an improved building situation. Although the construction of private residences and structures of a speculative character are at a low ebb, the industrial and Government work in progress and in contemplation gives a good tone to the market, and the outlook is for even better conditions by the coming autumn. The shipments of Portland cement compare favorably with those of last year, which was the ban-

ner year for the industry, and there is every prospect that the current twelvemonth will exceed the gross business of one year ago.

* * *

Satisfactory conditions in practically all lines of trade are reported, with prospects of a good season ahead. Government contracts, however, continue to cause some uncertainty, as it is not definitely known to what extent purchasing for war purposes will be carried. For this reason there is a disposition on the part of dealers to keep free of other business that they might be able to meet the demands of the Federal Government.

* * *

Senator McNichol, after a two-hour conference with Mayor Smith, said he would decide whether his contracting company would sign contracts for about \$12,000,000 for subway construction. The hitch in proceeding with subway construction is caused by the fact that

the bids made by Senator McNichol's firm were opened in February, but it was not until last week that the city was able to award the contracts. Since that time prices of material and labor have increased, and the contractors insist the city shall grant them concessions. The Keystone State Construction Company, Senator McNichol's firm, has been awarded contracts for two of the sections of the central delivery subway loop, two Broad street subway contracts and one contract for work upon the Frankford elevated line. Refusal by the contractor to accept the bids may delay subway work for a long time, as legal proceedings might follow such refusal.

* * *

Philadelphia banking interests have acquired control of the Canton Steel Company, of Canton, O. The concern manufactures steel sheets. The entire common and preferred stocks were absorbed by the buyers.

that competition may be conducted as joint constructive effort. They are developing new application for and better ways of using their product and are following their product into its fields of use to insure maximum service at minimum cost. They are in every way trying to prevent and discourage misuse of their material. They maintain a structural materials research laboratory for the express purpose of learning what should be avoided when using cement and of pointing out the best ways of using it economically. The result cannot be other than profitable to manufacturer and buyer.

Modern war creates tremendous activity—it calls into use every material resource of a country—its whole machinery of production and distribution. A little more than two years of world war have brought to this country a volume of business, the like of which we have never before known. Our power to produce has been taxed to the limit. Constructive effort—constructive selling—has often had its mettle tested during that time. Greater opportunities—greater tests are at hand.

The time to build is now, before materials run short, transportation becomes still more congested and labor is drafted into military service.

Some may strain present facilities beyond normal capacity and risk a breakdown. Others may expand temporarily by means of makeshifts. This is waste. Such a mushroom plant must soon be rebuilt. It is never efficient. Facilities should be permanently enlarged and solidly built to stand the strain of huge output. Costs can be reduced through efficiency, and that is possible only in a modern, adequate, constructively planned plant.

After the war, efficiency and low costs will be indispensable. Peace should find this country wonderfully equipped, its industries geared to the most efficient production, its railroads and highways capable of handling promptly and cheaply the greatest caravan of merchandise the world has ever seen. Only thus can American business hold its own in the coming trade struggle between nations.—J. P. Beck, Manager of Portland Cement Association, in "Real Estate Record."

If your proposition is one that should appeal to architects, builders, building owners, decorators, material and supply concerns, "The Builders' Guide" is the right medium for your advertising and cannot fail to bring you profitable returns.

ABSOLUTELY NECESSARY.

We may live without poetry, music and art;
We may live without conscience and live without heart;
We may live without friends, we may live without fads;
But business to-day cannot live without ads.

Don't lose your grip. Noah was 600 years old before he knew how to build an ark.

CONSTRUCTIVE SALESMANSHIP IN THE CONSTRUCTION FIELD

Not long ago there prevailed the notion that once a sale was consummated, every transaction it involved had been closed. This is quite in contradistinction to the idea of constructive selling which prevails to-day, and nowhere are opportunities for constructive endeavor in selling greater than in our several fields.

The actual consummation of a sale is merely the beginning of a transaction. Real constructive selling looks far beyond the signature on the dotted line. In the construction field constructive selling starts by inducing one to purchase a material. It then follows that material through various courses to its ultimate use in such a way as to make it render a service beyond its actual cost. This done, the material becomes its own salesman, thereafter. Between these two points—the act of inducing one to buy and the following acts of service that enable the buyer to make wise, proper and profitable use of the material bought, lies the whole range of modern constructive salesmanship.

Once the salesman's sole aim was to make a sale. There was no thought in his mind as to whether the material sold would properly fit the use anticipated for it, whether it would render a service that would make its cost forgotten, or whether the need even for the material ever really existed. It would be interesting to know, if possible, the total of the enormous losses which have resulted from that destructive salesmanship which because of ignorance or indifference failed to inquire as to whether a material would fit a need, that salesmanship which neglected to follow the thing sold into the field or through its intended use, thus failing to make certain that both satisfaction and profit accrue to the buyer and seller.

Constructive Selling.

Constructive selling is the key to more business. The salesman who is so short-sighted

as not to see beyond the transaction of the moment is facing the wrong way. Like those lovable old dike building Dutchmen whom Washington Irving tells us about—who, when landing on our shores are said to have begun building dams to hold back the Atlantic ocean—all unconscious of the fact that ample room in two or three millions of square miles was open to them to the westward.

It is not necessary that the constructive salesman appear as nor be thought of as sort of a crusader in a righteous cause, but he should know both his field and his product so thoroughly as to be able to see that what he is selling will be used rightly and so well that waste effort and loss of capital will be stopped.

I might refer briefly to the organization with which I am connected. In our field there is no need to build dikes, as it were, against competition. Through constructive effort our field becomes boundless. At no period in the history of the cement industry have its opportunities been so numerous. Construction which is actually needed is of such colossal volume that it would seem that nothing short of the highest form of constructive selling would ever get the job well under way.

But what is true of the cement industry is also true of other industries identified with building and construction. To-day we are grappling in this country with the problem of waste as we have never grappled with it before—waste in almost countless forms—waste of materials and products—waste of effort, and there is not one of the building and construction interests which has not now before it an almost unlimited field in which to exert those constructive efforts—that constructive salesmanship—which will show us through the profits of conservative how gigantic our waste has heretofore been.

Manufacturers of Portland cement are working on the new well established belief

FACTORS AFFECTING THE COST OF STRUCTURAL STEEL

The factors affecting the cost of producing and the cost of purchasing structural steel work were discussed in two papers presented recently before the Engineers' Society of Western Pennsylvania. Abstracts of the paper read by Mr. George H. Danforth, structural engineer, Jones & Laughlin Company, follow:

"An item of design in which a high cost is frequently incurred to save a small amount of material is in the use of riveted trusses for roofs and similar places, when a simple beam will answer all purposes, and there are a great many cases where roof trusses are used on spans of 30 to 40, or even 45 feet, where a simple beam would answer all the purposes, weigh possibly a trifle more, but cost in dollars and cents considerably less. This feature is, of course, subject to modifications, due to the variation in the price of material and the price of labor. At the present time it would probably be economical in material, but even at the present time the saving, under these conditions, would not be as great as might be imagined, and the greater stability and ease of cleaning and painting that attaches to the use of a simple beam over that of a roof truss, which has a considerable portion of its surface inaccessible, is plainly evident.

"This idea of getting economy by the use of simple sections in place of complex riveted sections is nothing new. In the days when channels were held at prices of 3c. and over, with angles and plates about half this price, it was a common practice to make bridge chords, even of small highway bridges, of four angles, two web plates and a cover plate, in place of two channels, and a cover plate, the conditions in the prevailing prices for material more than offsetting the additional shop work of using the plate and angle section.

"Another item that will occasionally affect costs and also affect delivery is the number of sizes that a designer will put into a structure. For instance, there is not sufficient difference between the dimensions of a 6x4-inch and a 6x3½-inch angle to prevent the use of either size throughout a job, rather than use both sizes. This is also true of 5x3½-inch and 5x3-inch angles, 3½x2½-inch and 3x3-inch angles; also 2½x2½-inch and 2x2½-inch angles. Each size that can be thus eliminated from a job means one less size to be realized before the fabrication of the job can be taken up, and so expedites delivery and reduces the work and troubles in putting through a piece of work.

"In this connection it might be well to mention that even nowadays we occasionally run across work wherein tees have been specified by the designer, in happy ignorance of the fact that there is probably not a more difficult section to get, even under normal mill conditions, than such tees.

"The same is similarly true, although in

a lesser degree, of small beams and channels. Many designers use these sections for lintels, when two or three angles could just as well be used, and which would eliminate any necessity for punching or for separators or separator bolts, and with no appreciable increase in weight.

"Going further into detail, you will find the matter of detail design, which of course involves the question of shop drawings. It seems impossible to some people to make details without getting rivets into pockets, where they are very difficult, if not impossible, to drive! or of building up a section which has to be partially assembled and partially riveted before the balance of the section can be put together and the piece finished. There is also a tendency to use an excessive number of rivets. A few excess shop rivets are not serious and do not appreciably increase costs unless the excess is great.

"The contrary, however, is true in regard to field rivets, as we frequently find field rivets put in with a free hand, utterly regardless of what it will cost the erector to drive them. In one instance which occurs to me the designer insisted upon using 24 rivets to hold up one end of a 24-inch beam, which was not subject to any excessive load, and very carefully arranged the details so that 18 of these 24 rivets would be down in a pocket where it was impossible to properly back up the rivet in driving.

"Another detail item that seems to receive little attention, outside of drawing rooms that are directly in charge of a shop superintendent, are changes in sizes of holes and in sizes of rivets. This is a frequent item of expense and a constant source of trouble, as, unless everyone connected with a job is constantly on guard, the condition will arise where a member that has been built using ¾-inch rivets will connect with a member that has been built using ⅞-inch rivets, and the holes for the field connections, instead of being the same size, will be of different sizes. In other words, of sizes suitable for the use of rivets used in the individual member.

"Column splices constitute another item wherein much money is often uselessly spent. With the ordinary plate and angle columns there is not much need of any splices other than plates on the flanges. An attempt to splice the web also frequently results in bad holes and other difficulties, while a web splice arranged with angles generally serves no useful purpose other than covering up, possibly, a case of a poorly milled end.

"Due attention is rarely given to the economies of duplication. To build one truss is expensive, but to build a large number of duplicate trusses is a relatively cheap operation, and it would frequently be an economy to make a large number of parts of a structure exact duplicates, even though it involved more

material than it would to make each separate and individual truss or part specifically designed for its work."

DON'T BE A BUSINESS SLACKER.

This hysterical stuff about cutting out business is the poorest kind of advice. The yellow newspapers that started the scare should lose all of their advertising. If that would put them out of business, all the better.

Buying should go on as usual.

There is a difference, though, between curtailment of needless expenditures and hysterical economy which bids the people hoard and refrain from buying the things needed to maintain life decently and comfortably. It is folly at the present time to hoard money regardless of consequences, and it is equally foolish to buy great stores of goods against a remote and theoretical need. The people of this country have little cause to worry about the future. Our natural resources are great. The farms will produce enough to feed the nation. The manufacturing plants will continue to operate at their present capacity and there will be work for all who are able and willing to labor.

The signs point to continued industrial, commercial and farming activity. Seven billion dollars have been voted by Congress for war purposes and the bulk of this sum will be spent right here in the United States. In the distribution, every wage earner is certain to get a share, and it is probable that wages will go higher than ever to meet their increasing prices. There is no possibility of America breaking down industrially, financially or commercially, and a period of business activity is assured.

There is no reason why business should not go on as usual. There is no cause to get excited over the future, even though the nation is at war. Every man and woman should remain calm and go about the daily tasks as usual. Economy is a virtue to be practiced at all times, but it must not be carried to the point where it becomes a vice. The wise resident of this country will buy what he needs for his comfort and happiness and save a little for the future as he has been accustomed to do. This is the only safe course and hysterical predictions should not overturn sober, common sense.—"Ohio Journal of Commerce" (Columbus).

Advertise! The minute you stop advertising you lose ground. You may not feel this loss right away. But you must feel it in the end. Advertising is the dynamo of modern business.

This is the age in which one man DOES ONE THING. You can run your BUSINESS. Find a man who can RUN YOUR ADVERTISING.

No one suffers from a mean disposition like the fellow who has one.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Business Building, Walnut street (central), Philadelphia. Architect, George S. Idell, 34 South Sixteenth street, Philadelphia. Owner's name withheld. Brown stone, 3 stories, new front and general alterations. Plans about completed. Architect ready for bids in a few days.

Office Building, 1710-12 Market street, Philadelphia. Architect, private plans. Owners, Mellon Estate, 1635 Ransstead street, Philadelphia. Concrete and brick, 8 stories, 45x175 feet, slag roof, vapor heating, electric lighting, tile and marble work, hollow metal skylights, fire doors, cement and pine floors, elevators, safety treads, metal weatherstrips, ornamental iron work. Sutton & Stephenson, 1317 Washington avenue, taking sub-bids.

Factory (alt. and add.), Fourth and Sedgley avenue, Philadelphia. Architect, private plans. Owners, Pecora Paint Co., on premises. Brick and reinforced concrete, second story addition, 100x50 feet and 2 stories, 25x50 feet, slag roof, pine floors (heating and plumbing reserved). John R. Wiggins & Co., Otis Building, taking sub-bids.

Residence (alt. and add.), 5854 Drexel Road. Architect, Walter F. Price, 714 Walnut street, Philadelphia. Owner, A. Simpson, 5854 Drexel Road, Philadelphia. Stone and steel, 1 story, 19x18 feet, tin roof, pine floors, hollow tile (heating extension), electric lighting. Architect taking bids, due August 29th. R. C. Ballinger & Co., 218 North Thirteenth street; M. W. Young, Overbrook, Pa., and Mowrer Bros., Merion, Pa., are figuring.

Bakery (add.), 1020 South Eighth street, Philadelphia. Architect, private plans. Owner, Nicholas A. Marinelli, 1020 South Eighth st., Philadelphia. Brick, 2 stories, 30x70 feet, new front and addition, rolled steel sash. Wm. F. Koelle & Co., Twenty-sixth and Thompson streets, lowest bidders.

Residence (alt.), 2433 North Sixth street, Philadelphia. Architect, Emil C. Schmidt, 419 North Fifty-fourth street, Philadelphia. Owner, Joseph C. Hadik, 325 East Thompson st., Philadelphia. Consists of interior alterations. Owner taking bids, due August 29th. Ketcham & McQuade, 1029 Brown street, are figuring.

Nurses' Home (add.), Fifteenth, above Race street, Philadelphia. Architect, private plans. Owners, Hahnemann Hospital, on premises. Brick and reinforced concrete, fireproof, 6 stories and basement, 38x21 feet, slag roof, steam heating, electric lighting, tile and marble work, hollow metal sash, cement and pine floors, metal lath, metal weatherstrips, damp-proofing. Owners have received bids.

Loft Building, 116-132 South Second street, Philadelphia. Architect not decided. Owner, J. W. Hallowell, Broad, below Chestnut street, Philadelphia. Reinforced concrete, 6 stories, 150x200 feet. Work contemplated.

Bank Building (alt. and add.), 819-821 Christian street, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Phil-

adelphia. Owner, F. Di Bernardino, 6328 Vine street, Philadelphia. Brick, marble and stone work, interior tile and marble work, cabinet work, leaded glass, vault door, electric lighting. Owner has received bids.

Storehouse (add.), Philadelphia Depot, Peltz street and Schuylkill avenue. Architect, private plans. Owners, U. S. Government, Schuylkill Arsenal, Peltz street and Schuylkill avenue. Brick and stone (elevator shaft addition), 5 stories, 15x15 feet, cement floors, hollow metal skylights, 2 elevators. Low bidders: Charles Gilpin, Harrison Building, \$14,998, 50 days; W. W. Anstine & Co., 1218 Filbert street, \$17,900, time 95 days.

Quarters for Radio Operators, Navy Yard, Philadelphia. Architect, private plans. Owners, U. S. Government, Bureau of Yards and Docks, F. R. Harris, Chief, Navy Department, Washington, D. C. Wood, concrete, 2 stories, 25x54 feet, asbestos shingle roof, hot water heating, electric lighting, waterproofing. Low bidders: Metzger & Fisher, Otis Building, \$15,947, time 90 days; W. W. Anstine & Co., 1218 Filbert street, \$16,747, time 180 days.

Power Plant, Thirty-fourth and Pine sts., Philadelphia. Architect, Philip H. Johnson, Land Title Building, Philadelphia. Owners, Philadelphia General Hospital, care of Dr. Wm. Krusen, 584 City Hall. Brick and stone, 1 story, 158x33 feet, 50x52 feet and 88x80 feet, slag roof (steam heating, plumbing and electric work reserved), marble and terrazzo work, rolled steel sash and skylights, hollow metal sash, cement floors, metal lath, fire and kalamein doors, iron stairs, ornamental iron work, damp-proofing. Owners taking bids, due September 12th. Wm. Linker Co., 831 Cherry street; Warren-Moore & Co., Colonial Trust Building; Standard Const. Co., 1713 Sansom street; H. E. Baton, 1713 Sansom street, and Charles McCaul Co., 1713 Sansom street, additional bidders.

Factory Building and Power House, Memphis and Tioga streets, Philadelphia. Architect, W. E. S. Dyer, Land Title Building, Philadelphia. Owners, Treen Box Co., on premises. Brick (slow burning). Factory, 2 stories and basement, 60x100 feet; power house, 1 story, 30x60 feet, slag roof, steam heating, electric lighting, metal lath, cement and plank floors. Architect taking bids, due August 31st. H. E. Baton, 1713 Sansom street; Freund Const. Co., Bulletin Building; Metzger & Fisher, Otis Building; F. A. Havens & Co., 845 North Nineteenth street; J. R. Jackson, Perry Building; John F. Davies, 1021 Herbert street, and Robert Beatty & Bro., 2321 East Fletcher street, are figuring, on revision.

Sewage Disposal Plant (add.), Byberry, Philadelphia. Architect, Philip H. Johnson, Land Title Building, Philadelphia. Owners, City of Philadelphia, Department of Public Health and Charities, Dr. Wilmer Krusen, Director, 584 City Hall, Philadelphia. Reinforced concrete and stone, emseher and dosing tank, sludge beds and sprinkler filters, wire

cloth. Low bidders: F. W. Mark Const. Co., Finance Building, \$87,870; W. W. Anstine & Co., 1218 Filbert street, \$98,450; W. A. Mundy Pav. and Const. Co., 227 South Ninth street, \$99,375.

Residence and Garage, Twelfth street, above Sixty-ninth avenue, Philadelphia. Architect, John H. Rothwell, Geneva avenue and Westford Road, Olney, Philadelphia. Owner, Chas. Dapp, 6916 York Road, Philadelphia. Brick and stucco, 3 stories, 46x35 feet, and 1 story, 14x22 feet, asphalt shingle roof, concrete, oak and pine floors (heating, plumbing and lighting reserved), tile and marble work, hollow tile, metal lath. Architect taking revised bids, due as soon as possible. John H. Dagney, York Road and Sixty-ninth avenue, Oak Lane; C. L. Hemmerly, Melrose, Pa.; W. John Stevens, Inc., Wyncote, Pa.; J. Sims Wilson Co., 1125 Brown street, and Alfred Steinhauser, 5424 North Fifth street, are figuring.

Warehouse (add.), Broad and Washington avenue, Philadelphia. Architects, Rankin, Kellogg & Crane, 1012 Walnut street, Philadelphia. Owners, U. S. Government, Bureau of Yards and Docks, F. R. Harris, Chief, Navy Department, Washington, D. C. Brick and reinforced concrete, 7 stories, 131x91 feet, prepared roof, concrete floors, hollow tile, rolled steel sash, fire doors, iron stairs, ornamental iron work, safety treads, metal window guards, waterproofing (heating, lighting and elevators reserved). Owners taking bids, due September 4th. Irwin & Leighton, 126 North Twelfth street; Cramp & Co., Denckla Building; Warren-Moore Co., Colonial Trust Building; Chas. McCaul & Co., 1713 Sansom street, and A. R. Raff Const. Co., 1635 Thompson street; Roydhouse-Arey Co., 112 North Broad street; F. W. Van Loon, Denckla Building; F. W. Mark Cons. Co., Finance Building; Conneen Cons. Co., 1737 Filbert street; W. W. Anstine & Co., 1218 Filbert street, are figuring.

Schools (improvements), Philadelphia, Pa. Architect, J. Horace Cook, Nineteenth street, above Chestnut street. Owners, Board of Education, Wm. Dick, secretary, Nineteenth above Chestnut street. Sanitary improvements, heating, gymnasium equipment, assembly room addition. Owners ready for bids, due September 6th at noon.

Connecting Bridge, Navy Yard, Philadelphia. Architect, private plans. Owners, U. S. Government, Bureau of Yards and Docks, F. R. Harris, Chief, Navy Department, Washington, D. C. Steel, asphalt and felt roof, plank floors. Owners ready for bids, due September 4th.

Garage, 2623-25 West Huntingdon street, Philadelphia. Architect, Amos Barnes, Hermit and Righter streets, Roxboro. Owner, Leo F. Smith, 2600 Huntingdon street, Philadelphia. Brick, 1 story, 30x100 feet, slag roof, cement floors (heating, electric lighting, plumbing and gasoline storage system reserved). Architect taking revised bids, due as

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

BUILDERS

Before your present company has a chance to say "No," ask me about placing your surety bonds. I'll give you the best of service, relieve you of all details, insure your getting lowest rates and protect you in every way. Get REAL SERVICE.

Residence, Morris Heights, N. J. Architects,

When Buying a Home

insist that the house is piped throughout for gas so you can take advantage of the ease and economy of cooking, heating water and ironing with gas.

And a Baseboard Gas Outlet in each room is just the thing for connecting floor or table lamps and also provides a ready means for using gas heating stoves in the early Fall and late Spring when it isn't practical to have the house heating system going all day and night.

Store and Apartments (alts.), 520 Columbia avenue, Baltimore, Md., \$3,000. Architect, J. C. Spedden, 2715 Harlem avenue, Baltimore. Owner, Dominick Citrano, 518 Columbia avenue, Baltimore. Consists of new front, metal ceiling, electric work, new floors. Owner is taking bids.

Apartment, Broks Lane, Baltimore, Md.

Architect, Clyde N. Friz, Munsey Building, Baltimore, Md. Owner, J. Henry Smith, 1426 Light street, Baltimore. Brick, 3 stories, slag roof, hot water heating, electric lighting, tile work. Owner will take sub-bids.

Store, Springdale and Edge avenues, Baltimore, Md. Architect, private plans. Owners, Mather Building Co., Baltimore, Md. Brick, 1 story, tin or slag roof, electric lighting, plastering, painting, plumbing. Owners are taking sub-bids.

The world is just chock full of men who failed because they expected buyers to romp right in and ask for goods. Modern business spends big money simply to get the buyer interested knowing that sales follow.

Don't try to see out of some other man's eyes when you've got a pair of your own,—use them and go over every job carefully before you consider that you are through with it, and don't forget that one "good job" is a better advertisement than many poor ones.—Exchange.

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.
DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

INCLOSED PORCHES

For Winter and Summer

Specially designed to conform with the architecture of the residence. Special quotations on heating and lighting Inclosed Porches.

PROGRESS IN THE DEVELOPMENT OF BALTIMORE'S CIVIC CENTER.

The civic-center plan for Baltimore prepared for the Municipal Art Society in 1910 by John M. Carrere, Arnold W. Brunner, and Frederick Law Olmsted, was given a new lease of life recently when the mayor proposed a vote by the people of a \$3,000,000 bond issue for carrying out the project. This bond issue was authorized by the Legislature in 1908, but was never submitted to the voters for ratification. Since the Mayor's suggestion

was made public, the City Planning Commission, the Park Board, the Municipal Art Society, and the Committee on Housing have devised a plan to facilitate the financial accomplishment of the plan.

The scheme involved the immediate acquisition of three city blocks lying between the City Hall and Fallsway, the latter a recently completed highway constructed above what was formerly an open creek called Jones Falls. The Court House, Post Office and City Hall form the nucleus of the civic center.

The plan proposed and the method of financ-

ing it has met with general approval, but the whole scheme has been set back temporarily by a court action recently instituted by owners of the property to be taken. An existing ordinance under which it is proposed to condemn this land was deemed insufficient to enable the city to take title. When legal difficulties are removed, it is proposed that the civic-center scheme should proceed as originally planned.

FOURTEEN RULES FOR FIGURING COST AND PROFIT AS RECOMMENDED BY THE NATIONAL ASSOCIATION OF CREDIT MEN.

1. Charge interest on the net amount of your total investment at the beginning of your business year, exclusive of real estate.

2. Charge rental on real estate or buildings owned by you and used in your business at a rate equal to that which you would receive if renting or leasing it to others.

3. Charge in addition to what you pay for hired help an amount equal to what your services would be worth to others; also treat in like manner the services of any member of your family employed in the business not on the regular payroll.

4. Charge depreciation on all goods carried over on which you may have to make a less price because of change in style, damage or any other cause.

5. Charge depreciation on buildings, tools, fixtures, or anything else suffering from age or wear and tear.

6. Charge amounts donated or subscriptions paid.

7. Charge all fixed expenses, such as taxes, insurance, water, light, fuel, etc.

8. Charge all incidental expenses, such as drayage, postage, office supplies, livery or expenses of horses and wagons, telegrams and telephones, advertising, canvassing, etc.

9. Charge losses of every character, including goods stolen or sent out and not charged, allowance made customers, bad debts, etc.

10. Charge collection expenses.

11. Charge any other expenses not enumerated above.

12. When you have ascertained what the sum of all the foregoing items amounts to, prove it by your books, and you will have your total expense for the year; divide this figure by the total of your sales, and it will show you the percentage which it has cost you to do business.

13. Take this percentage and deduct it from the price of any article you have sold, then subtract from the remainder what it cost you (invoice price and freight) and the result will show your net profit or loss on the article.

14. Go over the selling prices of the various

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

articles you handle and see where you stand as to profits, then get busy in putting your selling figures on a profitable basis and talk it over with your competitor as well.

THE MACDOUGAL ALLEY FESTA.

It was with confidence in Mrs. Harry Payne Whitney's intuition that we undertook to make of Macdougall Alley a little street, such as one sees in Lucca or Faenza, or indeed, any other central Italian town. Very often these little Italian cities have been the capital of an ambitious tyrant of the thirteenth or fourteenth century, and the seat of a small vain-glorious aristocracy. These cities were the cradles of the Renaissance, and the inheritors of princely pretensions. It is in consequence most usual to find in them the uncompleted works of ambitious nobles abandoned through the picturesque possibilities of the Italian past. It seemed to me that the low stables of Macdougall Alley might be grouped behind such frustrated facades; here a noble marble basement topped with indiscriminate shanties, further on a fortresslike ancient front transformed by a graceful later superstructure. I thought a little of the biography of towns and how houses are built at all periods with equal seriousness, and I then even included false classic buildings of the Napoleonic era in Italy. There are florid little chapels and serious little parish houses; there are belfries rising above concealed convents; there are secretive garden walls and pompous gateways leading to nothing. Here and there, above a disordered line of houses, rises the characteristic loggia hung with wash and drying onions, and out of all the windows I thought it would be life-like to throw the pathetic colored draperies which the modern poor hang out for Corpus Christi, and any other holiday, or even the bedsheets draped with a few flowers, or a precious counterpane. We copied the lights from documents, preserving the traditions for lighting the Palio at Sienna, practiced during centuries, and we took the rigidity off a modern apartment house by throwing up tall buttresses against it to resist a normal Italian tendency in towers to lean. There were trees in Macdougall Alley back yards which were a godsend to us, but a friendly florist was ready to conceal many defects, and to veil the nakedness of mere architecture in those showers of balcony flowers and vine which characterize the country towns of Italy. It is an immense pleasure to us that some exiled citizens of Italy have whispered into our ears words showing that the note was at least sufficiently well struck, and that these facades of pasteboard brought back to them visions of many a dormant little street in its old winding sheet of Italian sunlight.—Paul Chalfin, in "Architecture and Building."

Don't knock. Boost! Don't grouch. Smile! Don't mope. Advertise!

LUMBER AND CONCRETE.

Backed by a declaration that war demands for steel will increase and that the utmost we can produce will be below the requirements of ourselves and our allies, an urgent plea is made that steel be used for general business purposes only when the requirement is unavoidable. Lumber and concrete are strongly advocated instead, and there comes the intimation that unless a steel substitute is found some manufacturers may be obliged to curtail or even suspend operations during our participation in the European conflict.

The message goes to business men in the second of a series of war bulletins sent out by a committee of the Chamber of Commerce of the United States co-operating with the Council of National Defense.

It should be anticipated that the steel situation which is developing with rapidity will probably make it impossible for those general manufacturers, unable to find a steel substitute, to secure adequate supplies of steel and may even make it impossible to secure any.

No substantial increase in production is anticipated. Even maximum production from existing facilities cannot be expected because transportation, labor and material conditions will interfere with the full operation of plants. On the other hand, indications are that the war requirements will continue to increase.

Steel is needed in war for ships, railroad cars and locomotives, rails, trucks and containers, the bulletin goes on. It must be had for shells and other munitions work—requirements large in tonnage far beyond what is generally supposed. In addition, business producing government materials and supplies, the necessities of life and the materials for producing the necessities of life, require steel in great quantities for building, machinery, tools and containers. When all these requirements are met, it is said, little if any steel will be left for so-called general business.

Materials which can be used in substituting

for steel are plentiful in comparison. Lumber may be expected to meet all needs, and cement may be had in quantity for concrete work. While there may be delays in getting supplies of these materials, a hopeless shortage does not exist.

The course for business men to pursue is clear, it is advised. Every effort should be made to use wood and concrete in place of steel whenever this can be done, and construction and development work requiring steel should be postponed wherever possible.

In purchasing materials and supplies, it is argued, business men will doubtless consider the wisdom of returning, so far as possible, to doing business locally. The extraordinary service being rendered by the railroads in connection with the war will limit general transportation service and put an end during the war to the condition which has developed during the past fifty years through the prompt and reliable transportation facilities afforded by the railroads. Purchase must be made near at home wherever this can be done. The preference which must be given to shipments of iron and steel will soon make this situation of daily importance.—"Realty."

ILLUMINATED KEYHOLE.

By means of a small electric lamp concealed in a door knob, and operated by a push button, also concealed in the back of the knob, an Ohio inventor has made it possible for the late comer to find the keyhole, even in the darkest night. The lamp is so located that the light is thrown directly on the keyhole.

Learn to advertise. If you feel unequal to the task of preparing the kind of copy you ought to have, let us prepare it for you. Advertising is our business. We are always glad to help men who are honest enough to concede that they do not know it all. And the service won't cost you a penny if you contemplate joining the army of "Guide" advertisers.

Second Class Matter

As The Editor Sees It

WE were not a little amused to find the appended reference in the *Philadelphia Press*, to a matter of trade interest treated at some length in a recent number of THE GUIDE.

"The Master Builders' Exchange is up in arms over a provision in an ordinance approved by the Mayor in July, governing the placing of building materials upon the streets while building operations are in progress," says the *Philadelphia Press* of Tuesday, August 14.

"After re-enacting many of the provisions of existing ordinances, the paragraph to which exception is taken comes in. This provides that no permit may be issued for the placing of building material upon the streets within the section bounded by Spring Garden, Fifth and Green streets, and South street, between the Delaware and Schuylkill Rivers, nor on Broad street, between Lehigh and Washington avenues.

"*News of the passage of such an ordinance first reached the builders through a notice from the Police Department, served upon individual members a few days since.* This was a subject of consideration at the meeting of the Exchange directors yesterday, and was referred to the Committee on Legislation with instructions to report what may be done toward securing the repeal of the provision objected to.

"After the meeting, members of the board said that the enforcement of the

clause objected to would not only add about twenty per cent. to the cost of a building, but would also greatly hamper construction and delay completion. Under this ordinance no new material may be piled in the street in front of the building under construction, and no more than can be used in a day may be delivered anywhere except within the lines of the building under construction.

"This, it was said, means that provision must not only be made for the receipt and storage of material within building lines, but that mortar beds must also be arranged for within those lines."

* * *

THE amusing feature of this *Press* paragraph is the artless statement that "*news of the passage of such an ordinance first reached the builders through a notice from the police department.*"

News of the passage of the ordinance first reached the builders, the architects, the Master Builders' Exchange, and about everybody else in any way interested, through the article in THE GUIDE directing attention to the ordinance. The ordinance was introduced into Councils, acted upon and approved by the Mayor, without coming to the knowledge of anybody in the trade and was dug up out of a mass of similar legislation by the Editor of THE GUIDE, who devoted three pages of THE GUIDE and an editorial paragraph to bring it to the

attention of those most directly concerned.

* * *

EVERY builder in Philadelphia knows that it was THE GUIDE that brought the matter to trade notice. Every member of the Builders' Exchange knows that credit belongs to THE GUIDE. Every architect in Philadelphia is aware that it was THE GUIDE that brought the ordinance to general observation and that THE GUIDE did so weeks in advance of the notice given it by the *Press*, the other dailies and such mediums as the *Exchange Bulletin*.

THE GUIDE doesn't look for nor does it expect credit from the daily newspapers who make a regular practice of stealing its building news, but it does object most strenuously to the statement that the builders of Philadelphia, ninety per cent. of whom are paid subscribers to THE GUIDE, had to wait for police notice to get word of the passage of the ordinance. That statement is a wholly gratuitous misrepresentation.

* * *

THE ordinance relating to building material on the public highways was printed in full in THE GUIDE on August 1st. It did not appear in the *Press*, nor in the *Exchange Bulletin* until nearly a month later. Facts are not easy to get away with.

* * *

TO what extent architecture per se should be sacrificed to the interior requirements of the "home" is

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

125 S. 11th Street, Philadelphia

KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

not a new subject. Endless reams have been written upon it. An article, under the caption "Domestic Architecture," in the August number of the *Architect and Engineer of California*, marshals the familiar arguments in a common-sense vein that adds greatly to their effectiveness. After sharply criticizing the mediocrity of the average operative dwelling, the writer, Kenneth McDonald, Jr., a well-known Pacific Coast architect, goes on to say:

"Some of the houses put up by builders, however, are at least habitable, which is more than can be said of some of the houses built by architects. The builder never puts the main bedroom where it does not receive the morning sun. In fact, the builder makes few mistakes which hurt the convenience of the house, simply because he has to sell it.

"If some of the architects would go through the houses put up by builders, and would add their experience and training to what they find, there is no doubt the result would be good. Most architects do not listen to the suggestions of the women who manage the house. They do not place enough importance on the position of the bath rooms on the second floor, and the kitchen, laundry, etc. The majority of them make the mistake of permitting some architectural motive to dominate the plan, when in reality the architectural motive which is used should be the result of the plan. In other words, the exterior of a residence should express the interior arrangement. There should be no doubt in the minds of those who look at the house that certain tall, long windows open into a spacious living room or music room. The observer should also feel certain that other rooms more modestly placed are used for sleeping quarters.

"The style of architecture employed in various locations should be first influenced by the character of its occupant. It should express his or her tastes; whether they lead an active social life, or whether their pleasures consist in a quiet home existence among their children. It is reasonable to presume that those who take an active part in the social life of the community and give entertainments on a large scale, prefer a house which represents their wealth and position in the community. Those of more modest means, who usually have larger families, should be provided with simple, comfortable rooms, ample sleeping porches, and plenty of fresh air.

* * *

ELABORATE interior furnishings and finish should be avoided, as it merely curtails the pleasure of the youngsters and makes a continual battle necessary between them and their parents in order to protect the house. To

look for comfort instead of ostentation, should be their motto.

"The English country house represents the best that is known in domestic architecture, simply because it is the outgrowth of the needs of a constantly increasing family. Good material in the form of heavy masonry is used, and as generation after generation lives in the house, each makes its own improvement and addition, according to its needs. If a certain side of the house commands a beautiful view, and is not subject to the rougher weather, the living room naturally finds its ultimate location there. The original living room becomes devoted to other uses of minor importance.

"When bedrooms are added, they are placed where experience has taught the occupants that they will receive the best exposure. When the garden is added to the house it is on the sheltered sunny side. In fact, it is in just such a manner that all residences should be built. Far be it from us Americans to take so much time. We would be able to sell and move out of fifty houses in the length of time it has taken to produce one of the old English homesteads, with its garden of mature and well developed plants, and that perfect charm and repose which only thought and care and respect for the beautiful will give."

* * *

ONE of the difficulties with which the architect has to contend is the expectation, common among traveled clients, that he should be able to plan in a few weeks a type of country home equal to homes of the same type abroad, the realization of which has been in some cases the development of centuries.

* * *

ONE of the unique co-operative apartment houses of which New York City could boast for many years past has been projected for erection on Park avenue, extending from Fifty-first to Fifty-second street. It will embody features that have grown largely from the regulations of the new building code and the necessity for a solution of the servant and living problems, which, it may be remarked parenthetically, are more acute than ever. The plans, which have been prepared by Messrs. Starrett & Van Vleck, call for a structure nineteen stories high and containing duplex apartments ranging from twenty-two rooms or more down to two rooms with bath and pantry.

Above the 150-ft. building line the structure is to terrace back 15 ft. at every two stories, so that the occupants of the duplex apartments above the 150-ft. line will have gardens, pergolas, loggias and out-of-door sleeping porches, which will belong to them exclusively.

The building will not only be an apartment house, but a private dwelling and hotel combined, containing all the features which have made the Hotel des Artistes in West Sixty-seventh street—the artist builders' last operation—one of the most successful buildings of the year. There will be a hotel dining room, a ballroom, palm garden, swimming pools, squash courts, and other features for the pleasure comfort and health of the tenants of the building.

What is unquestionably the distinctive feature is the double service in the matter of cooking. A great kitchen will extend around the rear part of the entire second floor and be connected with every apartment, large and small, by fast-moving electric dumbwaiters. The corporation which will run the hotel and the building will be subsidized by a fixed annual stipend to cook for all the occupants of the building. The tenants may use this service or their own individual kitchens, or both, according to preference. The plan is intended to simplify the servant problem, making it possible to have an elaborate apartment and at the same time be independent of the aggravating servant problem. Another feature will be the service bureau, in charge of a competent matron, where servants in proper livery may be hired by the hour for any purpose. At the very top of the building there will be accommodations for forty specialized servants of this type.

The total cost of the building and the land upon which it will rest is estimated at about \$3,600,000. People may buy their apartments in the co-operative structure from \$15,000 up to \$120,000, according to size and location.

* * *

THE holding of reinforcing bars in proper position while concrete is being placed is a matter which merits the utmost attention. The labors of the best designer and detailer can be set at naught by the carelessness of those in charge of the construction of reinforced concrete structures, while placing steel and concrete.

A designer spends many days designing and detailing a complicated structure, the strength of which can be greatly impaired by comparatively slight displacement of the reinforcement at critical sections. Much time is spent in designing and detailing the reinforcement for a structure, and the all-important matter of getting and keeping the bars in correct position is disposed of by a single note, such as the following: "All reinforcement to be bent and placed as shown on plans and to be securely fastened or tied to prevent displacement during pouring of concrete and to insure proper position of reinforcement in the finished structure." It is left to the dis-

cretion of the construction foreman to devise a means of keeping the bars in position, and as a result the strength of the structure may depend on whether the foreman thoroughly understands his business or not.

This is neither good practice nor economy. The method and means of supporting reinforced bars should be clearly indicated on the plans, since they are as important details as the location of

bends of bars and stirrups. It is just as important to show the supporting bars, supporting blocks and clips, and the spacing bars as it is to show the main reinforcement in detail. Before the structure can be built it is necessary for someone to devise a means for keeping bars in position during construction, and, as a general rule, a competent designer is more capable of handling these details to good advantage than anyone else.

EDITORIAL NOTES

The Department of Industrial Education, University of Chicago, and the Extension Division of the Portland Cement Association are co-operating in providing a summer course in concrete, which offers a series of lectures by engineers and teachers thoroughly familiar with the cement industry and the subject of concrete as taught in manual training and vocational courses. The aim of the course is to provide practical and complete information for those who wish to learn the theory and fundamentals of concreting. The lectures—twelve in all—afford instruction in the various phases of concreting practice and provide demonstrations of the proper methods.

* * *

Complete statistics covering the Portland cement industry in 1916 show that the production, 11,521,198 barrels, was second only to that of the record year 1913, when 92,097,131 barrels were manufactured. The shipments in 1916 were 94,592,296 barrels, valued at \$100,014,882—a new record of valuation. Higher prices for cement prevailed throughout the United States in 1916, except at a few places where top prices were realized in 1915. The average factory price per barrel in bulk at mills was \$1.058, compared with \$0.860 in 1915, an increase of 19.8 cents, or 23 per cent. The combined production of natural and puzzolan cements in 1916 was 842,137 barrels, valued at \$430,874, compared with 793,541 barrels, valued at \$398,428, in 1915.

* * *

According to Philadelphia paint manufacturers, the Paint Manufacturers' Association of the United States has under way a series of successful tests with a new fire-retardant paint and is co-operating with the National Lumber Manufacturers' Association for the advocacy of this brand of paint. The label has been trademarked by the paint association, and will be used only by the manufacturers licensed to make the fire-resistant paint under the new formula. Other organizations helping in the problem of reducing financial losses by fire also are interested in the new product.

* * *

Preparatory to proceeding with the repairs to the Philadelphia City Hall tower, Director Datesman appointed Thomas Atkinson, a rigger, at \$8 per day. Three other riggers have been employed at \$6 per day. The supervi-

sion of the work has been placed in the hands of Robert Atkinson, a steeplejack, who is to receive \$500 a month for his services. This is the first attempt to be made to repair the tower in seven years.

* * *

At a recent annual meeting of the Builders' Exchange of Atlanta, the following officials were elected for 1917-1918: President, P. C. Gilham; first vice-president, A. A. Craig; second vice-president, D. A. Farrell; treasurer, R. M. Walker; secretary, Dan Carey.

* * *

Among those who have studied the present building situation it is generally conceded that the stagnation of building endeavor at this time is mainly due to the high cost of construction brought about by the excessive prices that have been charged for essential materials. A reduction in the cost of construction is possible through a recession of material prices to a level that owners feel will be consistent with building at a fair and reasonable margin of profit. At the present scale of commodity prices all building is accomplished in fear that profits will be jeopardized at any moment by the further increases, and building other than that absolutely essential to the abnormal industrial conditions that now maintain, is being held in abeyance until prices return to a more normal basis.

* * *

William Stampleman, formerly with the Universal Tool and Die Works, is now secretary of the Ever Ready Machine and Tool Works, 180-182 Worth street, New York City.

* * *

Speculative building is the one branch of building activity that has suffered more than any other from the prevalent high cost of construction. The erection of tenement houses, high class apartments, small dwellings for one and two families and loft and store buildings for manufacturing and commercial occupancy has practically ceased since material prices advanced to such an abnormal figure. Now that there have been reductions in the prices of so many commodities and other recessions in prospect by virtue of reduced operating costs and the consequent possibility of building at a reasonable profit, there is an expectation that more building of a speculative character will be started, and that general construction will be stimulated.

Robert W. Adams, manager of the Providence, R. I., office of the General Electric Co., was elected president of the Providence Engineering Society at its recent annual meeting.

* * *

The following general letter, addressed to all employees of Berry Bros., well-known manufacturers of varnishes, has been received by the entire working force of the company with great enthusiasm, and the employees feel extremely grateful to President O. S. Goan for his beneficent interest in their behalf. The plan might well be adopted by other large corporations:

"By the unanimous action of our Board of Directors, the company has arranged for what is known as 'group life insurance,' covering all of its employees, upon the following conditions:

"Any employee, no matter where located, who has been in the service of the company for six months, thereby establishing permanency of employment, is insured for \$500.

"Any employee who has been in the service of the company for one year and six months is insured for \$600.

"Additional insurance will apply for each additional year of employment until a maximum of \$1,000 has been reached.

"Under this arrangement, therefore, all those employees who have been in the service of the company five years and six months are insured for \$1,000.

"You, therefore, are requested to fill in the enclosed blank and return the same promptly.

"As soon as possible after all of these forms have been received, a certificate of insurance will be sent to each employee, free of any expense whatever, and the same will remain in effect so long as the employment continues. The general policy is contracted for and the insurance is now in effect.

"We wish to add that we are taking this action as an evidence of our appreciation of the faithful service rendered by a large number of employees for many years past, and our desire to encourage younger employees in the belief that their faithful efforts will be duly appreciated and properly recognized.

"Yours very truly,

"BERRY BROTHERS."

* * *

The Whitehall Construction Company will pay the City of Philadelphia \$5,100 for the privilege of demolishing the former residence of Senator James McNichol, Rudolph Blankenburg, former Mayor, and many other structures on the west side of Logan Square, and on Twentieth street, between Race and the Parkway. A contract for the work was let to the concern by the Fairmount Park Commission. Emolition of the buildings does not come under the Parkway plans, but under the Logan Square extension plan. Philadelphia paid almost a million dollars for the structures which are to come down, included among them being some of the city's finest residences. Work on the contract will be started at once, and it is expected that the entire section will be razed by November 1.

Leading contracting builders in Augusta, Ga., have recently perfected an organization in the shape of a Builders' Exchange, with the following officers: President, J. T. Lawrence; vice-president, L. E. Palmer; treasurer, L. M. Whaley; secretary, C. H. Van Ormer. The Exchange starts off with a membership of about fifty, but this number is expected to be rapidly augmented. The headquarters are in the Harrison Building, and the idea is to promote friendly relations between all branches of the building trade.

* * *

William W. Norton has been elected secretary of the Builders' and Traders' Exchange of Detroit. He succeeds Charles A. Bowen, who became secretary of the National Lumber Dealers' Association on February 1st, but who has continued his connection with the Detroit Exchange in an advisory capacity, although resigning as active secretary.

* * *

Many manufacturers of structural materials and also the building industry generally, more than welcome the announcement of the President's decision in regard to the fixing of the price of bituminous coal. While it remains uncertain whether the published prices are for the supplies required for Federal consumption exclusively, or will be applicable to private consumers as well, the consensus of opinion among those depending largely upon coal for manufacturing purposes is that the Government will not discriminate, but that all interests probably will be treated on the same basis in regard to the supply of fuel, and the price to be paid.

* * *

The General Electric Company will supply the entire electrical equipment for the Commonwealth Hotel, to be erected on a site in the Times Square district, New York. The power equipment would suffice for 20,000 people. Electrical apparatus for lighting, ventilating, heating, pneumatic tube service, vacuum cleaner system, as well as the operating and controlling devices for kitchen, laundry and refrigerating departments, together with the necessary conduits, cables, wires and lamps, will be supplied.

* * *

For a long time the producers of building commodities have been greatly affected by the prevalent high cost of fuel and the extreme difficulty of obtaining delivery of adequate supplies to operate their factories and plants. There was a demand for finished products that would have kept all manufacturers working to capacity had they been able to obtain the necessary fuel at a reasonable price. The condition that maintained was one of the prime factors in the establishment of the record high prices for structural materials that have now held without a break for nearly a year.

* * *

Building Trades Council of New Brunswick has been organized. It is composed of the plumbers, sheet metal workers, roofers, painters, bricklayers, masons and plasterers, electricians and building laborers with the addition of the carpenters' union. At a recent

election the following officers were elected: Martin Flynn, president; Eugene Fraley, vice-president; Lee Holliday, recording secretary; William Becker, treasurer; William Banker, financial secretary, and George Stoneman, inner guard.

* * *

Practically all producers of building materials and supplies are users of coal in the manufacturing of their commodities, and soft coal in many instances was the type of fuel generally desired, both on account of its lower cost and adaptability. Manufacturers of brick, terra cotta, lime, steel, cement and other fundamental building materials are large users of coal in manufacturing, and the scarcity and high cost have not only been responsible for the high prices being charged, but also for a material curtailment in the amount now

being produced. When it is considered that in the manufacture of Portland cement one pound of coal is consumed in the production of a pound of cement for market, some idea of the total amount of coal necessary for this industry alone can be had. Other industries manufacturing building commodities are users of coal for fuel in proportionate amounts.

* * *

The National Board of Fire Underwriters, 76 William street, New York, is mailing to a list of 66,000 manufacturers of the country a booklet, prepared for the Council of National Defense, of directions for the prevention of fire, particularly in plants working under the abnormal conditions of war time emergency. It has been given the title of "Safeguarding Industry."

RESOLUTIONS ADOPTED BY N. F. P. A. AT ANNUAL MEETING IN WASHINGTON

The National Fire Protection Association assembled in Washington for its twenty-first annual meeting, calls attention to the new and unusual hazards to life and property created throughout America by the world war which demand the utmost vigilance and initiative not only from those in authority but from the private citizen as well. Every individual should consider himself a fire warden of the nation at this critical time and should equip himself to serve his country by safeguarding to the extent of his intelligence and ability every form of natural and created resource. The elimination of waste, at all times the duty of good citizenship, is at this moment our profoundest public and private responsibility.

In its warfare against the needless sacrifice of human lives and property by fire the association advocates the following measures:

1. The adoption by municipalities of the Standard Building Code of the National Board of Fire Underwriters to the end that fire-resistive building construction may be encouraged, the use of inflammable roof coverings prohibited, adequate exit facilities from buildings assured, and interiors so designed and fire-stopped as to make easy the extinguishment of fires therein.

2. The adoption by all states of minimum building requirements for the protection of state and county hospitals, asylums and similar institutions outside city limits and of small communities in which the establishment and enforcement of a building code is impracticable.

3. The enactment by each state of the fire marshal law advocated by the Fire Marshals' Association of North America to the end that official investigation may be made of the causes of all fires, preventable fires may be eliminated by public education, and the crime of arson stamped out.

4. The adoption of the association's suggested ordinance providing for the systematic inspection of all buildings by city fire marshals or local firemen to insure the vigorous

enforcement of rules for cleanliness, good housekeeping, and the maintenance of safe and unobstructed exits, fire-fighting apparatus and other protective devices.

5. The enactment of ordinances similar to that of Cleveland, Ohio, fixing the cost of extinguishing preventable fires upon citizens disregarding fire prevention orders, and a more general legal recognition of the common law principle of personal liability for damage resulting from fires due to carelessness or neglect.

6. The wider general use of the automatic sprinkler as a fire extinguishing agent and life saver and the more general adoption of the fire division wall as an important life saving exit facility.

7. A careful study of the technical surveys of cities made by the engineers of the Committee on Fire Prevention of the National Board of Fire Underwriters covering the items of water supplies, their adequacy and reliability, fire department efficiency, fire alarm systems and conflagration hazards; and of the possibility of co-operation among neighboring cities through mutual aid and the standardization of hose couplings.

8. The adoption of the association's suggested laws and ordinances for state and municipal regulation of the transportation, storage and use of inflammable liquids and explosives.

9. The universal adoption and use of the safety match and legislation prohibiting smoking in all parts of factories, industrial and mercantile buildings except in such fire-proof rooms as may be especially approved for the purpose by fire departments.

10. The education of children and the public generally in careful habits regarding the use of fire.

11. The co-ordination of all these activities, through a central administrative officer or body of the state or city having primary jurisdiction, for the purpose of promoting uniformity of action and efficient co-operation.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Factory (int. alt.), southeast corner of Fourth and Cherry streets, Philadelphia. Architect, private plans. Owner, M. Zifferblatt, 2115 South Eighth street, Philadelphia. Consists of carpenter and mill work, painting, new power plant equipment, electric lighting. Owner will take bids.

Garage, Twenty-second and Summer streets, Philadelphia. Architect, H. E. De Hoff, 48 South Sixty-first street, Philadelphia. Owner, Edward M. Flood, Sixteenth and Cherry sts., Philadelphia. Brick, 1 story, 35x75 feet, slag roof, cement floors, steam heating, electric lighting, gasoline storage system. Plans completed. Owner will take bids in a few days.

Residences (2) (alt. and add.), 1904-06 S Fourth street, Philadelphia. Architect, J. Ethan Fieldstein, Hale Building, Philadelphia. Owner, J. Edelstein, Fourth and Morris sts., Philadelphia. Brick, 3 stories, 16x40 feet each, slag roof, pine floors, hot air heating, electric lighting. Plans completed. Owner is ready for sub-bids.

School (int. alt.), Oak Lane and Twelfth street, Philadelphia. Architect, J. Horace Cook, Nineteenth street, above Chestnut street, Philadelphia. Owners, Board of Education, Wm. Dick, secretary, Nineteenth above Chestnut street. Brick work, painting, partitions and interior alterations. Owners taking bids, due September 6th. Standard Const. Co., 1713 Sansom street; George Dobbin & Co., 414 South Forty-first street; E. C. Durell, 1713 North Twenty-fourth street; J. H. Jordan, Thirty-first and Oxford streets, and Warren, Moore & Co., Colonial Trust Building, Philadelphia, are figuring.

School (alt. and add.), Fifty-fifth street, between Chestnut and Ludlow streets. Architect, J. Horace Cook, Nineteenth street, above Chestnut street. Owners, Board of Education, Wm. Dick, secretary, Nineteenth street, above Chestnut street. Reinforced concrete, brick and stone, 3 stories, 75x87 feet, slate and tile roof, concrete, maple and composition roof, hollow tile, metal lath, tile and marble work, fire and hollow metal doors, iron stairs, ornamental iron work, roof ventilators, waterproofing, dampproofing, wire work (heating, plumbing and lighting reserved). Owners taking bids, due September 6th. Standard Const. Co., 1713 Sansom street; H. E. Baton, 1713 Sansom street, and Warren, Moore & Co., Colonial Trust Building, Philadelphia, are figuring.

Residence, Queen Lane Manor, Philadelphia, \$20,000. Architect, Samuel D. Hawley, 2nd, Queen Lane Manor, Philadelphia. Owner, Geo. C. Shane, 2815 Midvale avenue, Philadelphia. Hollow tile and plaster, 2 stories, 60x30 feet and 20x20 feet, roof undecided, hot air heating, electric lighting, tile work, hardwood floors. Plans in progress.

Residence, Queen Lane Manor, Philadelphia, \$6,500. Architect, Samuel D. Hawley, 2nd, Queen Lane Manor, Philadelphia. Owner,

Charles E. Peyton, 429 West Coulter street, Germantown. Hollow tile and plaster, 2 stories, 25x40 feet. Plans in progress.

Residence (alt. and add.), 1422 Poplar st., Philadelphia. Architect, Bart Tourison, Land Title Building, Philadelphia. Owner, W. M. Bunn, 1420 Poplar street, Philadelphia. Brick (bath room additions), general interior alterations, slag roof, hot air heating, electric lighting, oak floors, plumbing. Plans completed. Architect ready for bids.

Residences (16), Store (1), 4901-29 North Hutchinson street, \$37,900. Architect, private plans. Owner, W. Fischer, 3621 North Fifth street, Philadelphia. Brick and stone, 2 stories, 15x31 feet, slag roof, pine floors, hot water heating. Work about to be started.

Stores and Apartments (2), 249-51 South Thirty-seventh street, Philadelphia. Architect, Frank E. Hahn, 1112 Chestnut street, Philadelphia. Owner, Albert Gold, care of architect. Brick, 2 stories, 15x56 feet each, slag or composition roof, pine, hardwood and cement floors, steam heating, electric lighting, tile and marble work, metal bulks. Plans in progress. Architect ready for bids in a week.

Stores and Apartments (alt. and add.), corner of Laurens avenue and Queen Lane, Philadelphia. Architect, Mahlon H. Dickinson, Bellevue Court Building, Philadelphia. Owner's name withheld. Brick, 1 story and basement, 46x85 feet, slag and slate roof, steam heating, electric lighting, tile and marble work, cement, composition and pine floors, metal lath. Revised plans completed. Architect taking sub-bids.

Warehouse (add.), Broad and Washington avenue, Philadelphia. Architects, Rankin, Kellogg & Crane, 1012 Walnut street, Philadelphia. Owners, U. S. Government, Bureau of Yards and Docks, F. R. Harris, Chief, Navy Department, Washington, D. C. Brick and reinforced concrete, 7 stories, 131x91 feet. prepared roof, concrete floors, hollow tile, rolled steel sash, fire doors, iron stairs, ornamental iron work, safety treads, metal window guards, waterproofing (heating, lighting and elevators reserved). Owners have received bids.

Warehouse, Eightieth street and Island Road, Philadelphia. Architect, W. E. S. Dyer, Land Title Building, Philadelphia. Owner's name withheld. Brick and reinforced concrete, 1 story, 46x275 feet, slag roof, cement and maple floors (lighting and heating reserved), rolled steel sash, fire doors, metal window guards, ornamental iron work. Architect has received bids.

Nurses' Home (add.), Fifteenth street, above Race street, Philadelphia. Architect, private plans. Owners, Hahnemann Hospital, on premises. Brick and reinforced concrete, fireproof, 6 stories and basement, 38x21 feet, slag roof, steam heating, electric lighting, tile and marble work, hollow metal sash, cement

and pine floors, metal lath, metal weatherstrips, dampproofing. Owners have received bids.

Store and Residence (alt. and add.), 808 South Second street, Philadelphia. Architect, J. Ethan Fieldstein, Hale Building, Philadelphia. Owner, Harry Berman, on premises. Brick, 3 stories, 20x70 feet; addition, 2 stories, 20x30 feet, slag roof, pine floors, hot water heating, electric lighting, tile and marble work, metal lath. Plans completed. Owner taking bids. Bierns & Cylinder, 521 Mifflin street, are figuring.

Bank, 9 South Fifty-second street, Philadelphia, \$50,000. Architects, Penckert & Wunder, 310 Chestnut street, Philadelphia. Owners, Guarantee Trust and Safe Deposit Co., 316 Chestnut street. Limestone and granite, bronze trimmings, 1 story, 15x67 feet, slag roof, hot water heating, electric lighting, marble floors. Plans in progress. Architects will take bids in two weeks.

Stores and Residences (2) and Garages (2), 1306-S South street. Architect, J. Ethan Fieldstein, Hale Building, Philadelphia. Owners, Bierns & Cylinder, 521 Mifflin street, Philadelphia. Brick, 2½ stories, porch additions, slag and tin roofs, pine floors, electric lighting. Contract awarded to Stokes Bros., 6723 Musgrave street, Philadelphia.

The business man who grudges a commission to an advertising agent who thinks "he can do it himself" is usually about as intelligent as he would be if he grudged the commission of the architect and decided to build his store for himself.

LET ENGINEERING STUDENTS FINISH THEIR COURSES.

There is a steadily growing feeling that engineering classes should not be broken up because of war. We are glad to note that at least two engineering periodicals voice that sentiment.

Chancellor Brown, of New York University, has advised engineering and medical students to finish their courses, the engineers to take military tactics as part of their curriculum.

There are about 10,000,000 men between the ages of 21 and 30, of whom less than 17,000 are taking courses in engineering colleges, or one in 600. About an equal number of engineering students are below the age of 21. As operators of machine guns or users of rifles, these partly trained engineers would be no more effective than men entirely without engineering training. As graduate engineers, however, they will be vastly more useful to the nation.

If the war is to be short, these undergraduate engineers will be of little or no use as engineers in the war. If it is to be long, their usefulness after graduation will be great, particularly if during the remainder of their course at college they are required to study the principles of military engineering.

Already many engineering students have enlisted in the officers' reserve corps, and are not only continuing their regular engineering studies, but are studying military engineering. In addition they are spending their recreation hours in physical training under military instructors. Engineering students at Yale were among the first to volunteer for this strenuous double duty.—"Engineering-Contracting."

Barrett Specification Roofs

**Guaranteed
for 20 years**

Free Roof Insurance for 20 Years

You are proud of that new plant—proud of its modern construction, its efficiency, its output. It represents a big investment of money and enterprise.

Of course it is insured against fire. But how about the roof? Is your investment there insured?

If you cover your building with a Barrett Specification Roof you will get such insurance in the shape of a 20-Year Surety Bond.

Our experience has proved that a roof laid strictly according to The Barrett Specification will last much longer than twenty years without repairs of any kind, and our new plan of issuing the 20-Year Surety Bond Guaranty gives owners the benefit of that experience.

Here is our offer:

On all roofs of 50 squares or more, in all towns of 25,000 or more throughout the United States and Canada, and in smaller towns where our Inspection

Greensboro, N. C.

Service is available, we will give a 20-Year Surety Bond Guaranty, provided the roof be laid strictly according to The Barrett Specification of May 1, 1916, and by a roofer approved by us.

This bond exempts the owner from all expenses of maintenance and repairs for a period of twenty years.

We claim only the right to have an inspector on the roof during construction to insure strict compliance with the specification.

The risk is ours, the gain is yours.

Leading architects, engineers and roofing contractors throughout the country are familiar with and endorse our plan.

A line to our nearest office will bring any information you may desire concerning this proposition.

COMPLETE CITIES TO BE ERECT- ED FOR U. S. GOVERNMENT.

Plans have been made and locations are now being selected for the 32 towns to be erected by the U. S. Government for mobilization camps for the new army of 1,000,000 men. Each camp will be of sufficient size to provide for about 22,000 soldiers and will be a complete city in itself. As soon as the camp sites are chosen the surveys will be made and contracts will be let. The construction work will be done by contract, under the supervision of Army officers.

To direct this undertaking Col. I. W. Littell, of the Quartermaster General's Division, Washington, D. C., has been placed, by order of the Secretary of War, in general charge of contonment construction. Col. Littell has already begun organizing his forces for the work.

It is estimated that 600,000 M feet of lumber will be required, and arrangements are being made to secure this in all parts of the country, preferably in the section where the camps will be located. Each of the 32 cantonments contain about 2,000 houses. These will include quarters for the men, officers' quarters, kitchens, mess halls, bathhouses, storehouses, and all the various buildings needed for housing the troops and providing for the varied activities of a big camp. Most of the buildings will be long, one-story structures, with some two-story houses. They will be of plain construction but will be of modern type, and the plans and sanitary arrangements will carry out the most approved methods. They are expected to be the best arranged, cleanest, and most up-to-date barracks yet erected.

Each town will cover about 720 acres, a little over a square mile, and this does not include the large area required for drill grounds at each camp.

The contractors who are to do the construction work will organize their own forces of carpenters, laborers, etc., but the building will be done under the direction of Army officers. Several officers from the Quartermaster's Department, Government inspectors, timekeepers, foremen, engineers, plumbers, etc., will be stationed at each camp town, and Col. Littell has already begun to arrange for the men required for this work.

In addition to the 32 camptowns, the Quartermaster's Department will erect groups of warehouses at points where Army stores are to be concentrated. The exact number and location of these has not yet been determined, as they are to be erected to meet the needs of the Army as they arise.

Do not fear advertising as an expense, but court it as an asset, for that is really what it is—a value unseen, but determined from results.

GETTING CONTRACTS FOR CONCRETE BUILDINGS

Salesmanship Methods Discussed—What a Selling Campaign Should Embrace and What is to be Avoided

Selling a concrete building to its owner, now that reinforced concrete is so widely accepted as a meritorious material for industrial buildings, usually really means the getting of the contract to erect such a building. It seems to me that fundamentally it makes little difference whether we are out to get a lump sum contract, a cost plus percentage contract, or a cost and profit sharing contract, or any one of the many service-forms of building contracts—the underlying problem is to get the job. The perfect salesman for this class of business is the fellow who can get the contract.

It has been my experience that contractors weaken their selling campaigns the moment they attempt to dictate to the prospective customer, how that customer shall do his business. Our position has always been that we were out to sell our services to our customers on any fair basis and that the form of contract they chose was of secondary importance.

Suppose you hear of a factory that is going to be built and you decide you want the contract.

You've got considerable of a task to make the proper approach and interest your prospect in your proposition. Perhaps you have, first of all, to sell concrete as compared to steel or mill construction, if the status of the building so far as material or construction is concerned is not already established. That accomplished, either by you or previously, next comes the presentation of the actual contract getting, talking points such as your company's record of work done, its present readiness to erect the building in question, its financial strength and the perfection of its organization. Then the merits have to be made clear of such factors as the plant ready to send to the job at once, the liveness of the Traffic Department, the speed records and what certainty of delivery means, and above all else, dependability of performance.

To drive home to the buyers' inner conscientiousness, to that part of him which actually moves himself as distinct from the external casual momentary side of him, these selling arguments; and also to make each of the many other talking points count and win; to tell this story so that the listener will believe it, and what is more believe it so he knows unalterably that what is back of the salesman is the best on the market—all this is ordinarily about as much as the salesman can hope to accomplish.

If you bring up the question of the particular form of contract that the contractor will alone accept, you add to the salesman's task and bring in a new element, which really is a subject by itself and but a detail of the big selling problem.

The statement has been made that no selling is possible except when the contract takes the form of a service or percentage document. I want to take exception to this statement. I know of many instances where hard intensive selling, such, for example, as interviews, telephone calls, frequent telegrams, photographs—monthly, weekly, daily, twice a day, influence channels properly worked, printed literature, inspection trips to similar jobs—where such good hard sweating has landed the contract at a preference in the straightest and hardest kind of competitions.

Two instances particularly are in my mind—one in competition of lump sum bidding of ten bidders for three-quarters of a million dollars job, where the fifth from the bottom bidder secured the job at \$60,000 preference. Hard selling, backed by unblemished reputation and unusual speed records, influenced the Board of Directors to pay the premium. Another case of a nearly million dollar job. Thirteen bidders, the pick of the country, straight lump sum bids, nearly \$80,000 preference to the ninth highest bidder. Selling did it.

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.

913-47 North Ninth Street, Philadelphia

The intelligent owner starts out not to buy a particular kind of contract, but to select the contractor he believes will serve him best. Of course, if the contractor can persuade the owner to award the job without competitions, so much the better, and for this kind of a deal the service or percentage contract has many merits and advantages and is rapidly coming into force. In fact, the writer's company out of thirty-two concrete buildings contracted for in the first five months of 1917, handled twenty-six on a cost and percentage basis. But as far as the general selling problem is concerned the form of contract is secondary. Sell your services first and then sit down with the lawyers to sign the papers. The contract form is but one of the good building salesman's many talking points—to be used as needed.

Industrial executives in letting building contracts may, in my experience, be divided into two broad classes, and I believe this division applies pretty widely to any set of buyers:

1st—The man (or company) who wants what he wants more than the money it costs.

2nd—The fellow who thinks more about the price than he does about his purchase.

Number One you can sell. He wants a good building built on time and is willing to pay a fair price. Secure his confidence and let him write his own contract (whether he takes competition or not depends on the salesman or

on unchangeable conditions). There is, as other builders have well pointed out, no better line of attack than to reach your man through his own industry or his own friends. Another good way to sell buildings is to let some one else sell for you. Impartial opinion, real or ostensible, goes miles beyond prejudiced salesman's talk. Architects or engineers should be cultivated to this end.

Often competitive bids are taken by this first class of buyers, but they select from their bids the concern they believe to be the best. Of course, price has to be considered, but is of secondary importance. A good building salesman keeps it there. The refusal of a job at a price other than your bid is a situation to be sought and of great value when secured.

Number Two can also be sold, but it is a far harder accomplishment and rather rare unless we consider getting a job on price selling. Personally, I think it is order taking. Price alone is being more and more talked out of the modern contracting business, but it's a mighty big factor yet.

The architect and the engineer are susceptible to the same line of thought as the owner. Of course, the details of approach, argument and closing are radically different, but the foregoing principles are fundamentally correct here as well.

In selling reinforced concrete buildings, a man is arguing the merits of a material or of a class of construction.

In getting a job, the contractor is, of

course, selling services—often the two problems dovetail. It seems to me, however, that for either or both the following requirements are vital to successful selling:

1st—Perfect your organization to the point where it can and does do what is claimed for it. Over statement of merit gives but temporary success.

2nd—Advertise energetically and as extensively as your purse affords. Job signs, booklets, photographs, magazines, newspapers—all are effective.

3rd—Intensively sell by means of men of pleasant personality who know their game; that is, are experienced in the concrete construction field, can design broadly and advise knowingly, and above all who have energy and courage, and won't take no.—J. P. H. Perry, Contract Manager, Turner Construction Company, in the New York "Real Estate Record."

PLASTER TROUBLE.

A frequent trouble encountered in plastering is the failure of the plaster to adhere permanently to the lath. In some cases this is due to an excess amount of sand in the plaster. It may be caused by a little carelessness in mixing. Sometimes the plaster is too old when applied and will not adhere properly.

Probably the most fruitful cause of unsatisfactory plastering, according to a builder, is insufficient slaking of the lime. Before all the little particles have been reached by the water, the hair and sand are thrown in and the mixture slapped on the laths. For weeks and months afterward little lumps of lime continue to absorb water and explode, causing small cracks or blisters and throwing off little chips from the surface. When the Boston Public Library was built, the lime for plastering was slaked one whole year before mixing. Allow at least a week for this chemical action, keeping the same in a tight box outside.

Hair is mixed with plaster to give it tenacity. Watch the next mixer you come across. He probably will turn the hose on some dry lime, hoe it back and forth for a few minutes, then throw in the hair and mix the two. The result is that the hair is so burned that it retains no more of its tenacity than does a toothless bulldog. It is far harder to distribute the hair evenly throughout the mass of lime putty than when there is free water to help break up the lumps; nevertheless, for the sake of a good job, see that the hair does not go in for twenty-four hours at least after slaking, and a week would be better. Long ox hair is best; goat's hair is not strong; short cattle hair and horse hair are of the least value. Chopped manila fiber is largely used in New York.

River sand is best for plaster. Pit sand

We have pebbles all sizes. Cost less than what you are using. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

is liable to contain clay, and sea sand is not so angular so that the lime does not bind it so closely together. If sea sand must be used, see that it is washed in fresh water to take out the salt.

A New York architect of experience says that on straight work, where there are no elaborate moldings, he specifies two-coat work with patent plaster. If he asked for three-coat work he would get a higher estimate and the same sort of a job. If the walls of the house have been built particularly straight and true, two coats of plaster are just as good as three. If the walls are not true then the plastering may be so uneven that base-board and casings will not fit closely against it.

The truth of the matter is that on fine work, where cornices, moldings or coves are to be run, good workmen can do a far better job with three coats than with two. As a matter of fact, however, unless you have an experienced and conscientious superintendent, you will really get a two-coat job when three coats are specified.—"Keith's Magazine."

This is the age in which one man DOES ONE THING. You can run your BUSINESS. Find a man who can RUN YOUR ADVERTISING.

The world is just chock full of men who failed because they expected buyers to romp right in and ask for goods. Modern business spends big money simply to get the buyer interested knowing that sales follow.

Don't lose your grip. Noah was 600 years old before he knew how to build an ark.

Learn to advertise. If you feel unequal to the task of preparing the kind of copy you ought to have, let us prepare it for you. Advertising is our business. We are always glad to help men who are honest enough to concede that they do not know it all. And the service won't cost you a penny if you contemplate joining the army of "Guide" advertisers.

As The Editor Sees It

BUILDING operations in Philadelphia in August fell far below the average for that month in the last ten years, according to the monthly statement issued by William W. Gamble, statistician of the Philadelphia Bureau of Building Inspection.

Only 542 permits for building operations were granted. These represented an outlay of \$1,554,115. The average number of permits in August since 1907 was about 1,300, with an average outlay of \$3,700,000. In August of last year 1,247 permits were issued for operations costing in all \$4,472,120. The slump for last month is attributed to the advanced cost of building materials, scarcity of skilled workmen and the tremendous decrease in operation activity due to this condition. Philadelphia is not by any manner of means alone in this respect. New York and other cities feel the pinch of changed conditions as keenly as we do. In New York City a mass meeting of real estate and construction interests, within a radius of twenty-five miles of New York, has been called with a view to determining the actual cause for the general slump in building construction. It is said that agents of the Federal Trade Commission are at work on a similar investigation.

* * *

THE Government's interest is said to be centred upon the matter of finding adequate housing for the thousands of employees that are being gathered for work on Government war

requirements, and incidentally to help keep down the cost of rents.

The fact has become apparent to all concerned that unless some encouragement is given to builders the present stagnation of construction and underbuilt conditions will force rents so high as to make living conditions almost prohibitive.

The committee charged with arranging for the mass meeting received so many requests from associations and building material and equipment companies, engineers, and other interests for an opportunity to lay their side of the question before the general conference, that it was deemed wise to defer fixing a definite date for the mass meeting until an auxiliary committee of building supply and equipment interests, authorities on finance and other persons could be selected.

The outcome of this New York meeting will be awaited with interest. As matters stand operative builders, while admitting the extraordinary demand that exists for houses, intimate that the moneyed interests do not appear to recognize the changed conditions. The moneyed interests attribute the slump to the timidity of the operators insisting that there is available money in any quantity for every legitimate project.

* * *

SUCH work as is being done despite advanced material costs, the labor scarcity and the difficulties at-

tendant upon delivery, is of a large industrial character or is public work. Not all of this public work is federal and limited to military measures.

Reports filed recently with Mayor Smith by Director Datesman, of the Department of Public Works, indicate that within the last twenty months—the life of the present Administration—all previous records for a like period for making public improvements were exceeded. According to the reports, almost \$4,000 was spent every hour and every two days five contracts were awarded for the making of a public improvement of permanent nature, now completed or nearing completion.

The loans of last year made possible this unusual activity. While these loans provided for work in all the city departments, an unusually large share of the money was allotted to the Department of Public Works for various improvements, especially the construction of new streets, the reconstruction of old ones and the further improvement of the various parkways and boulevards. Aside from these, there were additional improvements which had to be made by the department, and these included the construction of new sewers, bridges, work on the city's proposed sewage-disposal system and improvements affecting the city's water supply. There was also loan money provided for the permanent improvement of various kinds of city property, including small parks.

AFTER the loans were formulated, but before they were authorized, Mayor Smith and Director Datesman completed plans for the work which was to be done with the loan funds. There were three classes of improvements to which they especially gave their attention because of the urgent need of such improvements. These included new streets, additional sewers, new bridges, work on the sewage-disposal plant and the Parkway. This advance preparation helped considerably when it came to getting the work under contract and on the way to completion. Within twenty months \$15,409,394 was put under contract, or \$779,469 every month. Of this total amount, \$8,022,419 was put into the work which had to be done by the Bureau of Highways. More than one-half of this total sum was put under contract between January 1 last and the present date and was devoted to constructive or reconstructive work. There was a total of 773 contracts awarded, which amounted to three contracts every two days. Under the contracts, 108 miles of new or reconstructed streets were completed, or are nearing completion and, in addition, 119 miles of streets which were in bad repair were put in good condition.

* * *

NEXT to the Bureau of Highways, the bulk of the improvement work fell upon the Bureau of Surveys. Here the improvements consisted principally of new sewers, new bridges, sewage disposal work and the elimination of grade crossings. There was a total of twenty-two bridges completed, and in connection with this work \$1,335,500 were expended. Plans were completed for eleven additional bridges involving a total of \$1,144,000 and much of this work would have been placed under way, had it not been for the high cost of materials and labor. There were 227 contracts or five contracts every two days, awarded for the construction of branch sewers, which involved a total of \$1,437,488. The daily expenditure on the work was \$2,875 and there was a branch sewer completed every three and one-quarter days. All told, almost twenty miles of branch sewers were completed and there is now under construction, nearing completion, thirteen additional miles of sewers of the same kind. The work on the main sewers was also pushed, but was not as extensive because the prices asked for such work were prohibitive. As it was more than a half million dollars, or \$510,000, was spent on twelve separate contracts. The additional main sewers planned by the bureau, but held up on account of high prices, will cover twelve miles and require an expenditure of \$1,202,500. The real big feature of the improvement

work under the jurisdiction of the Bureau of Surveys was in connection with the city's proposed sewage disposal plant. There was a total of \$3,025,000 put under contract in connection with this work, which means a total expenditure of slightly more than \$6,000 a day. The feature of this work will be that one of the three big units of the entire system will have been completed and there have been provided sites for the other two units.

* * *

IN the Bureau of City Property the improvements necessitated the award of a total of 115 contracts, three every two weeks and the expenditures of more than \$500,000. These improvements for the most part affect the small parks, Independence Hall and City Hall.

The improvements made under the supervision of the Water Bureau cost the city more than \$500,000 and are covered by seven contracts, ranging in expenditure from \$19,000 to \$148,000.

* * *

OF course, the bulk of the work here referred to was not "building" work in the sense in which it is generally used, but if large bridge and road work projects may be carried through to completion despite labor and material costs what is to prevent the early resumption of operative activity? Waiting for conditions to improve is admittedly unwise as there is every prospect that the present scale of costs will continue for at least a year after the close of the war. Virtually half of Europe is to be rebuilt. America will undoubtedly supply the material. This means a demand that will hold the prices of material to present figures long after peace has been concluded.

* * *

SOME interesting facts regarding the high cost of building are expected to be presented when the suit instituted by Thomas D. Green, of the Hotel Woodward, against the Ford Motor Company for alleged breach of contract comes to trial in the Federal Court. Mr. Green is suing for \$1,500,000, which he claims as damages for the failure of the Ford Motor Company to erect a fifteen-story building on the northeast corner of Broadway and Fifty-fourth street, adjoining the Woodward in New York City. Mr. Green points out, in his complaint, that, despite the increased cost of building, it had been stipulated in his contract that if the building should cost more than \$700,000 he was to pay 5 per cent. additional on any sum over that amount.

The new building was planned to provide over 300 extra rooms for the Hotel Woodward, and it would have given that

hotel a frontage of the entire Broadway block on the east side between Fifty-fourth and Fifty-fifth streets.

The corner is one of the most desirable on Broadway just north of Times Square and some surprise was occasioned in realty circles a week ago when the new plans of the Ford Motor Company were filed for erecting a six-story building on the site estimated to cost \$300,000. As the corner is assessed at \$423,000, and the purchase price in June, 1916, was said to have been nearly \$500,000, the proposed improvement is considerably less than the value of the land, something unusual in a growing commercial centre unless a taxpayer is erected as a temporary expedient.

Mr. Green's lease of the upper thirteen floors of the originally planned structure, as shown in the complaint, aggregated \$1,470,000 for twenty-one years beginning Aug. 1, this year, the yearly rental ranging from \$45,000 for the first year to \$75,000 from the thirteenth to the twenty-first year.

* * *

HOW material costs have advanced in certain lines has been revealed in the statement made by Jerome Loucheim, president of the Keystone State Construction Company, in commenting upon the loss to his company occasioned by the city's delay in awarding the Philadelphia subway contract. Said Mr. Loucheim:

"If bids were made to-day, they would be about \$4,000,000 higher than those made in February. We realize, however, that refusal to accept this work might mean a long setback to the transit programme, so we are going ahead.

"The public little understands the difficulties confronting us. For instance, our firm had delivered here 1,000,000 feet of lumber during the last week, and yesterday it was all commandeered by the government, and we are puzzled how to get more.

"The public may be getting tired of seeing that mass of steel on the southwest plaza of the City Hall. We have been ready to put the steel into place for several months, but we cannot get enough steel to complete the connections with the work under South Broad street and under the City Hall. If we should attempt partial work it might be possible that the effort would result in the destruction of a part of City Hall.

"With conditions like these, we are facing the possibility of a loss of \$1,000 a day if we start the new construction work and the present difficulty of getting supplies continues."

Once-in-a-while advertising is like once-in-a-while eating. Good in its way, but decidedly not nourishing.

EDITORIAL NOTES

Lawson Purdy, at the annual convention of the National Association of Real Estate Boards in Milwaukee, continued to discuss the value of the zoning system in the light of New York City's experience. The efficacy of sane regulation of city growth and provision for future expansion of growing municipalities has been pretty well demonstrated. The old idea that an individual could do as he pleased with his property regardless of the rights of his neighbors has become a thing of the past. It is now being conceded that the interests of the community as a whole are more to be considered than the petty interests of the individual.

The American Parquetry Floor Company, 1124 Walnut street, Philadelphia, announce their removal, September 1, to Suite 802 Bailey Building, 1218 Chestnut street, Philadelphia, where they extend a welcome to their many customers and friends.

* * *

Although many of the leading architectural and contracting concerns of this city are pessimistic when discussing the present building situation they still hold much hope for the future. Their attitude in regard to prospective work is mainly based upon the anticipated Governmental action through which the price of structural steel and other essential materials of construction will be fixed, and they generally feel that just as soon as the announcement is made, commodity prices will be substantially lowered. As a consequence of reduced material prices a number of structures that are at present being held in abeyance on account of the excessive construction costs will be started and rushed to completion. It is only in this manner that the demand for accommodations, both for living purposes and industrial and commercial expansion, will be satisfied. There are numerous new projects in prospect, the plans and specifications for which have already been prepared, and the owners are only waiting for a recession in material prices to a point where construction is possible on a more reasonable cost basis.

The National Paint, Oil and Varnish Association will hold its convention at the Congress Hotel, Chicago, Ill., October 7-11. George V. Horgan, 100 William street, Manhattan, is secretary.

* * *

Leading contractors do not hesitate to predict that as soon as the present war is ended that this country will experience one of the largest building movements in its history. Furthermore, the activity will not be confined to any one locality or district, but will be general throughout the entire nation.

* * *

American electric apparatus is gaining

rapidly in popularity the world over. A compilation by the National City Bank of New York shows that the value of electric machinery, appliances and instruments reported in the fiscal year 1917 aggregated more than \$50,000,000, against \$30,000,000 in 1916, \$10,000,000 in 1914, and \$10,000,000 in 1911.

* * *

The National Lumber Association has agreed at a meeting of its Executive Committee to continue to co-operate with the United States Forest Service in the collection of statistics of American lumber production. The excellent work done by the association in 1916 made similar service during 1917 highly desirable.

* * *

Another important phase of construction that is showing evidence of increased activity to a marked degree is the alterations of existing structures to meet with modern requirements, both for business and living. In Manhattan and also the other boroughs of the city there is quite a number of projects of this type. In total this class of work will involve the expenditure of large sums and consume immense quantities of materials.

Gilbert L. Robinson, formerly connected with the steel department of Gaston, Williams & Wigmore, Inc., New York, has resigned to become associated with F. W. Highberger & Co., coal, coke, pig iron and steel, 30 Church street, New York.

* * *

In war—modern war—it is necessary for the Government either to seize the processes of production and distribution or to declare a partnership with business and share control of the basic industries with the proprietors. The proprietors do not object to it in principle, because the use of such measures in a time of national emergency is obvious to all intelligent people, but if they did object it would not matter at all, for then the Government would go further and set the proprietors out of doors—for the duration of the war. All of this is now perfectly understood. What very few of us have begun seriously to con-

sider is that this partnership between Government and business will not end with the war. It cannot, for the reason that the Government at the close of the war will be immediately confronted with the problem of funding, carrying and liquidating a debt so big and so suddenly created that no fiscal experience of the past can have any coherent relation to the problem. This will be true all over the world.—A. A. Housman & Co.

J. L. Philips & Co., wholesale and manufacturing yellow pine specialists, 32 Broadway, Manhattan branch office, New Orleans, La., have incorporated under New York State laws. The officers of the new corporation are: President, J. L. Philips; vice-president, C. L. Robinson, and secretary, treasurer, E. R. Philips.

* * *

The Association of Iron and Steel Electrical Engineers will hold its eleventh annual convention at the Bellevue-Stratford Hotel, Philadelphia, Pa., September 10-14, inclusive. Wednesday, September 12, will be devoted entirely to a patriotic program, with addresses to be made by army and navy engineers on matters of vital importance to the industries with which the association is identified.

* * *

There ought not to be a school building in the city which cannot meet a sanitary test and be marked "good." A sound body is an essential to a sound mind, and educational benefits are handicapped if the children are subjected to the menace of unsanitary conditions. Undoubtedly the immediate abandonment of every unfit school building is impracticable, but the reconstruction, or actual displacement, of such buildings ought to have first claim on the attention of the Board of Education, and no false economy should stand in its way.

* * *

Sperry & Bittner, Pittsburgh, Pa., is the name of a new firm that has opened offices in the First National Bank Building as manufacturers' agents. Ralph C. Sperry was formerly Pittsburgh district manager of the Brilliant Electric Division of the National Lamp Works. William A. Bittner has for the last ten years been connected with the Union Electric Company of Pittsburgh as office manager and purchasing agent. Both are well known to the electric fraternity. At present they represent the Steel City Electric Company, of Pittsburgh; A. O. Schoonmaker Company, of New York City, and the Argus Lamp and Appliance Company, of Cleveland, Ohio.

* * *

Two of the largest steel fabrication plants, which will construct 100 of the largest vessels for the Emergency Fleet Corporation, will be erected on the Delaware River—one on Hog Island, near League Island, and the other at Chester. At the same time it was announced that a third plant would be built at Newark. Contracts for erection of these plants, which

will be on Government land and semi-Government owned, will be signed by the Emergency Fleet Corporation, but the corporations that will erect and operate the plants have been authorized to begin work without waiting for the signing of the contracts.

The Hog Island plant, the largest, will be erected by the International American Corporation, of which the New York Shipbuilding Company is a subsidiary. The Chester plant, which will be next in size, will be erected and

operated by the Harriman interests. It is understood that one of the Chester shipbuilding concerns will be absorbed by the Harriman interests.

The Emergency Fleet Corporation has set aside \$35,000,000 for the erection of these plants and of this sum \$25,000,000 will be used for the plants on the Delaware, while to the Submarine Boat Company, which will erect the plant at Newark, will be apportioned \$10,000,000.

METAL LATH IN STUCCO AND PLASTER CONSTRUCTION

As shown in the investigation of the durability of stucco and plaster construction now carried on by the United States Bureau of Standards in their laboratory at Washington, D. C.

An extensive practical investigation is now being carried out by the Bureau of Standards of the United States Government regarding the permanency of stucco as applied to various bases and with various mixtures. For this series of tests a special testing structure was erected approximately 200 feet long, 26 feet wide and 25 feet high. The building is two stories in height, covered with a low hipped roof and ornamented with cornices and pilasters. The exterior walls of this building have been divided into panels approximately 10 by 15 feet in size, each panel containing a window or a door. In this manner, fifty-six panels have been provided with various bases for the plastering and various types of mixtures. The following information in regard to the performance of metal lath in these tests has been digested by the Publicity Bureau of the Associated Metal Lath Manufacturers, and is herewith presented to those readers who have become interested in the subject of stucco construction. The panels referred to are divided into eleven groups, which can be summarized as follows:

- Groups 1, 2 and 3—Metal Lath, 19 panels.
- Groups 4 and 5—Wood Lath, 8 panels.
- Group 6—Plaster Board, 4 panels.
- Group 7—Terra Cotta Tile, 9 panels.
- Group 8—Brick, 3 panels.
- Group 9—Gypsum Block, 3 panels.
- Group 10—Monolithic Concrete, 6 panels.
- Group 11—Miscellaneous, 4 panels.

The detailed construction of these various panels is described in Bureau of Standards Bulletin No. 70 (pages 8 and 9).

Quoting from this report (page 10), we read: "The number of panels in the different groups is proportioned roughly by the probable extent to which similar construction is used throughout the country, although this number is augmented or decreased according to the importance of certain groups or for the purpose of introducing special tests where found desirable. Thus, since metal lath is used most extensively, the first three groups comprise three different types of construction on metal lath as a base, and each having certain

advantages. It should be stated, in order to avoid a misconception of the purpose of the tests, that while comparisons between various groups and individual panels are always possible, it has been the sense of the committee that each panel should stand primarily on its own merits as representative of a certain type and method of construction, and its eventual condition and rating should be established without reference to any other panel."

Stucco mixtures of various proportions and types were used. These types of stucco are shown in detail in Bulletin No. 70 (pages 6 and 7).

The plastering of panels was started on October 19th and completed on November 24th, 1915. The condition of the test panels has been inspected on three occasions. The first investigation is the result of two independent inspections, "the first made on April 4th and 5th by Messrs. A. C. Bagnall (Bagnall Taylor Company), J. J. Farley (architectural sculptor and contracting plasterer) and William O. Humphreys (John C. Humphreys & Son, expert plasterers and members of the Advisory Committee, and the second made on April 6th and 7th by Messrs. R. J. Wig, J. C. Pearson and W. E. Emley, of the Bureau." The second examination of the test panels was made on December 8th, 1916, and the third investigation in May, 1917. The report of the third inspection has not been printed at this time, but the earlier ones appear in Bulletin No. 70.

The general plan followed in inspection was as follows: "First, a superficial examination was made, in which the general condition and appearance of the panels was noted; then a close and careful investigation was made immediately after spraying the panels with water." The detailed inspections are reported in Bulletin No. 70, pages 63 to 66 inclusive, and supplementary remarks on condition of panels December 8th, 1916, on pages 72 to 74.

Panel No. 15—The Perfect Panel.

Of all the 56 panels erected, it is to be noted that Panel No. 15 is the only one which

has received a rating of "Excellent" in all inspections. An inspection of this panel in May, 1917, by a representative of the Associated Metal Lath Manufacturers shows that this panel still maintains its perfect rating.

The construction of Panel No. 15 consists of ribbed metal lath on ½-inch crimped galvanized furring attached directly to studs with lath back-plastered between studs; stucco mixture (parts by weight), 1 cement, 1-10 high magnesian hydrated lime, 3 sand.

Quoting from report on this panel, page 29, Bulletin No. 70:

"Superficial inspection: Color, uniform dark gray; no cracks; surface rough, general appearance excellent.

"Detailed inspection: No cracks; bond good; condition excellent."

Summary of Results.

It is interesting to examine in tabular form the ratings of the various types of bases used for plastering. In this summary is included the ratings given from the detailed inspection under the heading of "Structural Condition."

Under "Percentage of panels rated fair or better," metal lath is only exceeded by brick and monolithic concrete, which materials, of course, are not comparable to metal lath owing to their greatly increased cost. Metal lath, therefore, stands first among the popular types of stucco construction. The exceptionally high standard of efficiency of metal lath is apparent in all inspections, as well as in the recent investigation conducted in May, 1917.

Analyzing the metal lath panels into the three groups adopted by the Bureau of Standards, and considering the percentage of panels rated fair or better, we find the following results:

Four panels, metal lath, attached to studs without sheathing and lath back plastered, 100 per cent.

It is of particular interest that the back-plastered lath without sheathing has 100 per cent. rating the same as monolithic concrete and brick.

Copies of Bulletin No. 70, Bureau of Standards, will be furnished gratis by the Associated Metal Lath Manufacturers, 901 Swetland Building, Cleveland, Ohio; or can be procured from the Superintendent of Documents, Government Printing Office, Washington, D. C., at 15 cents per copy.

THE TIME TO ADVERTISE.

The editor of "Concrete Age" writes that in a publishing experience of twenty-five years he has never known a time when trade paper advertising was so important, so practical, and so certain of fixed results as at present. "For when the war ends," he says, "the advertising done now will have a double value, first in producing new customers while your competitor is 'off duty' (making war munitions, perhaps), and second in the increased demand for your goods which is sure to follow the declaration of peace.

"Advertise now, as you never did before, and reap results one hundred fold. There can be no question about this investment, for the returns are absolutely certain."

GREATEST REAL ESTATE ERA IN HISTORY NEAR

By Valentine Surnor, President of the Chicago Real Estate Board.

I have been asked by many members of our organization and by many other real estate men as to the probable effect upon the real estate business that will be exerted by the war. I think American entrance into the war will prove a tremendous stimulant to practically all lines of business, and to none more significantly than the realty business.

My reasons why? They are plain enough. The Government has voted an initial war credit of \$7,000,000,000. That is the greatest single government credit in the history of the world. What does it mean?

It means the dispensing of that huge sum of money in all avenues and arteries of trade in this country. Yes, even the three billions that we shall lend to the Allies, because that money will unquestionably be used in stabilizing financial balances in the United States, consequent upon the huge purchases made of us during the past three years or so, and, as a consequence, we shall have our own Government behind the obligations which have been entered into by foreign powers to our manufacturers and producers. That means, of course, from the business viewpoint that there will be no crash due to panicky financial conditions, and will serve to imbue our whole industrial, financial and commercial fabric with renewed confidence.

But more than the mere stabilizing effect, the raising of this huge sum and its distribution will mean stimulated business activity. My own opinion is that within a few weeks

we shall see an activity that is almost feverish.

We shall see all industrial lines worked to their fullest capacity. We shall see high wages, speeded-up production, increased farm yields, with price restrictions but fair and even high prices to the farmers; in short, we shall witness a period of the greatest business and industrial activity that this country has ever known.

We shall see millions—yes, billions—of dollars, previously hoarded, come out from their hiding places and placed in Government securities. This, when distributed, will mean the appreciation of other securities, because it will mean business expansion. We shall see less "blue-sky" and "get-rich-quick" schemes succeeding, because the people are patriotic and will put their money into Government bonds at lower rates, to help their country and, with the stimulation that the spending of this money will afford, will be able, later, to receive good interest rates upon sound investments, including sound real estate investments, of course.

The influence of all this upon the realty market is plain enough. Factory site will be in acute demand. Homes for workmen will be in lively call. Homes of the better grade, for men who have made an unusual amount of money out of the expanded condition of trade, will be in considerable demand. Store sites, especially in the neighborhood of new or expanded industrial centers, will command good prices and a good market.

and protect himself in the matter of cost. And he generally is unable to visualize or picture from the drawings and plans that are made and shown him just how his building will appear, or whether his ideas will be carried out.

Bewildered by Plans.

"Generally speaking, plans are a source of bewilderment to the layman. Undoubtedly the prospective owner has noted and studied certain features contained in different buildings which strongly appeal to him.

"Often at his instigation these features have thereupon been assembled, harmonized and drawn out on what are technically known as flat elevation and sectional drawings, which are perhaps even more of a mystery to him than the plans. To him the elevation drawing, ordinarily, is hardly an intelligent picture.

"Then a number of contractors are asked to submit estimates of cost based on the plans and specifications. Statistics show that in a vast majority of cases the figures received are far in excess of the owners' expectations.

"The prospective owner should realize that building materials and labor cannot be legitimately obtained at less than cost. Therefore, should he accept an offer that is materially lower than the ruling price, he must take it for granted that the contractor purposes to erect and deliver the kind of building that can be constructed for the low price he has made. If the cost is 20 per cent. less than the market price the owner will receive a building 20 per cent. less in value than he intended to build.

"Building to-day is a much more expensive and difficult operation than it was a generation ago. This is due to the constantly increasing cost of labor and supplies. Yet it has been practically demonstrated that it is entirely feasible for a man who would erect a building to go to a reliable business concern which will design, construct and deliver to him a building, complete, as a mortgagor company would sell him an automobile.

"But with the extraordinary facilities at the command of the modern builder there is little chance of disappointment or for misunderstanding to arise. A maximum guaranteed cost can be agreed on, and in such case it is not necessary for the owner to pay more than the contract price. The builder, on the other hand, will credit to the owner any saving that may be effected in the execution of the work."

ABSOLUTELY NECESSARY.

We may live without poetry, music and art;
We may live without conscience and live without heart;
We may live without friends, we may live without fads;
But business to-day cannot live without ads.

HOME BUILDERS SHOULD CAREFULLY STUDY PLANS TO KEEP DOWN COSTS

Home builders who find the cost of their dwellings have exceeded the appropriations and that many things they ordered were made at an extra cost, should not blame the contractor, according to architects who have listened to complaints in regard to costs.

Failure to study plans carefully and to understand them often compels the home builder to pay extra for the things he wants most, say the architects.

To prevent such surprises the builder is advised first to obtain a complete set of plans. He should have the architect explain them in detail and the specifications should be complete and as thoroughly understood.

Then when the plans are taken to the builder there should be another understanding. If the home builder has a limited amount of money and the contractor's bid exceeds that amount the owner should learn just what is eliminated to bring the cost within his means.

Full Understanding Necessary.

Only such an understanding of the plans, specifications and the contract will make the owner secure, according to N. F. Hoggson, member of the American Builders' Commission, which will advise Europeans regarding structural costs in the building operations that follow the war. Mr. Hoggson said recently of building contracts:

"The cost is the starting point. An owner's dream of the building he would like to have is, of course, his heart's desire. After his needs, wishes and requirements are understood by the builder, and it is known the desired structure can be erected for the specified amount, then construction work may safely begin.

"That way would be idealistic, but it finds few parallels in reality. The average owner usually omits at the outset to determine on

The "Builders' Guide" is the OLDEST, and the ONLY Architectural Publication in Pennsylvania.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Office Building, Tacony, Philadelphia, \$20,000. Architect, Thomas B. Lippincott, 1505 Arch street, Philadelphia. Owners, Tacony Ordnance Corp., Tacony, Philadelphia. Brick, concrete and hollow tile, 2 stories and basement, 44x50 feet, slag roof, cement floors, steam heating, electric lighting, rolled steel sash, steel doors, iron stairs, metal lath. Architect ready for bids, due September 12. Barclay White & Co., 1713 Sansom street; F. W. Mark Const. Co., Finance Building; Irwin & Leighton, 126 North Twelfth street; Chas. McCaul Co. and H. E. Baton, 1713 Sansom street; Turner Concrete Steel Co., 1713 Sansom street; Warren, Moore & Co., Colonial Trust Building; Doyle & Co., 1519 Sansom street; J. Sims Wilson Co., 1125 Brown street; Pomeroy Const. Co., 1609 Ranstead street, and John R. Wiggins & Co., Inc., Otis Building, are figuring.

Elevator Shaft, 1732 North Randolph street, Philadelphia. Architects, Ballinger & Perrot, Seventeenth and Arch streets, Philadelphia. Owners, McNeely & Co., on premises. Brick and steel, concrete work, slag roof, metal lath. Architects have received bids.

Stores and Apartments (2), 249-51 South Thirty-seventh street, Philadelphia. Architect, Frank E. Hahn, 1112 Chestnut street, Philadelphia. Owner, Albert Gold, care of architect. Brick, 2 stories, 15x56 feet each, slag roof, hardwood and pine floors, steam heating, electric lighting, tile and marble work, metal bulks. Architect has received bids.

Steel Plant, Tacony, Philadelphia, \$380,000. Architect, Thomas B. Lippincott, 1505 Arch street, Philadelphia. Owners, Tacony Ordnance Corp., Tacony, Philadelphia. Brick, steel, concrete and A. P. M., 1 story. Machine shop, 270x130 feet; treating shop, 135x102 feet; forge shop, 136x210 feet, slag (saw tooth) roofs, rolled steel sash, cement floors. Plans in progress. Architect ready for bids in a week.

Stores and Apartments (alt. and add.), 2040-26 North Broad street, Philadelphia. Architect not selected. Owner, Miss Julia S. Isaacs, care of M. Getz, Fifteenth and York streets, Philadelphia. Brick, 3 stories, consists of remodeling present dwellings. Work contemplated.

Residences (9), Mansion and Leverington streets, Philadelphia, \$20,000. Architect, private plans. Owner, Martin H. Keller, 326 DuPont street, Philadelphia. Brick, 2 stories, 16x23 feet, slag roof, hot air heating, electric

lighting, hardwood floors. Builder, Wm. E. Keller, 480 Harmon Road, Roxborough, is subletting.

Residences (2), Germantown, Philadelphia. Architect, private plans. Owner's name withheld. Brick, hollow tile and plaster, 2½ stories, 30x47 feet, stone and frame; 2½ stories, 48x29 feet, slate roof, parquetry, oak, composition and cement floors (heating reserved), electric lighting, tile work, metal lath. Hayes Mendenhall & Son, 1029 Drexel Building, are taking sub-bids, due September 15th.

PUBLIC LEDGER—PHILADELPHIA, FRIDAY MORNING, AUGUST 17, 1917

"I Used My 'Autocar Motor Trucks' for This Excavation"

"ON July 23d I started this job of excavating for the new five-story machine shop that The Autocar Company, of Ardmore, Pa., is

adding to their great motor truck plant—it was a problem how best to dig out some 3000 cubic yards of dirt and haul it to the Autocar baseball field, a mile and a half from the plant.

"It was a question of horses or trucks, but it would have taken seventeen teams of horses to do the work of five Autocars at an additional cost of about sixteen cents per cubic yard.

"My own four Autocar trucks and one other Autocar that I hired have done the job with wonderful speed and economy—each Autocar has dumped, on an average, forty yards of dirt a day at the ball field.

"You will see in one of the pictures a pair of

horses—that one pair has ploughed up much of the dirt, has helped pull down some of the old buildings that were on the site—and I have also hitched them

on the trucks to give a lift up the steepest grade out of the cellar. That takes an unnecessary strain off the motors.

"To my mind the Autocar is in a class by itself for work like this—its short wheel base makes it easy to operate in the pit where longer trucks are useless. By loading the trucks down in the cellar I did away with my steam shovel, which was fifteen miles from Ardmore (a four-days' round trip).

"Handling this job with Autocars I was able to excavate at the rear first, and the foundations for the new building were being laid there before the digging was half finished."

ONLY ONE PAIR OF HORSES USED ON THIS JOB

*I will be glad to figure
on your Excavating Job*

L. S. FILBERT, Contractor

Widener Bldg., Philadelphia, Pa.

This advertisement of L. S. Filbert, the big Philadelphia contractor, appeared in the Philadelphia Public Ledger on August 17, 1917.

It describes graphically the possibilities of "The Autocar Motor Truck" for contracting.

"The Autocar Motor Truck" is used in every line of business by transportation companies, merchants, coal dealers, farmers, etc., etc.

THE AUTOCAR COMPANY, ARDMORE, PA.

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

BUILDERS

Before your present company has a chance to say "No," ask me about placing your surety bonds. I'll give you the best of service, relieve you of all details, insure your getting lowest rates and protect you in every way. Get REAL SERVICE.

SAMUEL B. MAC DOWELL & SON

1927 W. Montgomery Avenue, Philadelphia, Pa.

It's the Long Fire Travel in the Burnham Cosy Comfort Boiler That Makes the Short Coal Bill

IF you can keep the hot gases and smoke travelling back and forth inside a boiler long enough to extract the bulk of their heat, and still not make the draft sluggish; it's plain enough that less heat will go up chimney and more heat go into your radiators.

That back and forth action is what we call fire travel. It's this long fire travel in the BURNHAM Cosy Comfort Boilers that has a lot to do with making their short coal bills.

Our Engineering Department is at your service in solving Heating Problems

As The Editor Sees It

MR. DANIEL WILLARD is the presiding head of the Baltimore and Ohio Railroad Company. He is also one of two or three specialists in transportation delegated by President Wilson to work out the railroad side of the war situation. Within his own, immediate line Mr. Willard is admittedly an authority. Outside of the zone of his regular every-day activities, and away from what might be called the technique of transportation Mr. Willard knows probably as much or as little as the next man in the street. At Washington, recently, Mr. Willard was prevailed upon to submit to an interview and in the course of that interview was prevailed upon to give utterance to some very crude and ill-considered ideas.

Taking as his text the cryptic little sentence, "We must win the war!" Mr. Willard talked at some length on the general necessity which, in his opinion, exists for a systematic and nation-wide observance of economic safeguards. A few of the statements Mr. Willard makes will find ready concurrence; a great many of his statements will be set down, I imagine, as downright foolish.

* * *

IF you are about to undertake an enterprise, stop and ask yourself this question: Will this help America win the war?"

That is the way Mr. Willard sums up for the people in the cities and on the farms their problem and duty. There

are two reasons why we should have this test. The immediate one is the necessity for conservation of every ounce of power in production, transportation and distribution. Not only must America meet her own war-time economic problems, but she must assist in meeting those of England, France, Russia and Italy—for the protection of America. The second reason is that rich America may need every dollar of its almost incalculable wealth. Mr. Willard said:

"You must understand that this war differs from all that preceded it. Hitherto wars have been between armies. This war is between the economic forces of the opposing nations. That means a testing of our whole people and those of our allies against the whole people of Germany and her allies. No one can really grasp the terrible nature for us of that testing unless he knows Germany and the German people. I have visited Germany many many times, and I know the efficiency of the German Government and people to be such as will tax our resources to the utmost if we are to win, and—

"We must win."

* * *

ISAY we must win. Let me drive it home to you that if we do not win Germany will win. There is no middle ground. War means that opposing sides seek to impose their will upon each other. Unless we win Germany will impose her will upon us. Germany will

force upon us her standards, and she will do that after she shall have made us as near powerless as she can. That is what she is trying to do to-day, with all of her efficient millions.

"Now you ask me how we shall fight. I have told you that this is an economic war in which whole nations grapple. That means that every man, woman and child in America is a soldier in this war. Every man, woman and child is adding to the economic power of America in greater or less degree, or is decreasing that power. Every man, woman and child is a good soldier or a bad soldier. How shall they be sure of being good soldiers? My answer is this:

"Let every person about to embark upon any enterprise, great or small, ask this question: Will you help America win the war? If they will ask that of themselves, they will have no difficulty in ascertaining the right answer, for our people are enlightened and perceptive. And if they adopt the right answer, they will have become good soldiers."

* * *

UP to this point Mr. Willard's remarks, while overdone on the side of hysteria, are comparatively innocuous. In other words, they are broad generalizations to which the average patriotic man of business will not be disposed to take exception. It is when Mr. Willard essays to become specific that he ventures into deep water. The Willard idea of a wise and patri-

**BLUE
PRINTS**

otic national economy is to—stop all building! Stop all building in order that every dollar available may be hoarded for the building of locomotives! The war is to be won by locomotives. The nation with the greatest number of locomotives, according to the Willard mode of reasoning, is destined to emerge the victor. All other avenues of enterprise are to shut up shop. Everybody is to take to building locomotives. Mr. Willard's railroad training permits him to think in terms only of locomotives.

* * *

By way of illustrating, in my opinion churches should not be built unless the planners believe America will be aided thereby," says Mr. Willard. "Postoffices should not be built. Unnecessary private residences should not be built. Public improvements should be put off, unless it is clear that they will add to the efficiency of our nation in the war or are necessary in the interest of the public health or safety.

"Measure these facts against each other—measure the imperative needs of Russia, added to the needs of England and France, against our capacities and our own normal demands.

"How are we going to do it? How are we going to protect ourselves in helping Russia and France and England by giving them nearly all of our output of locomotives, when our own demands are for 4,000 of the output of 5,500? There is just one way of doing that. We must get along without our normal purchases of new locomotives despite the tremendous increased strain which the war has put upon our railroads. We must, we simply must, do this, because the more locomotives to Russia, the fewer men to the western front, perhaps to death!

"I say that we will send locomotives to Russia by denying ourselves our needs. Now, when I put to you the problem how we can achieve the denial, I carry you back to the test every American should put to himself: Will this help America win the war? If a church is being planned, the stone and steel and other materials must be transported in cars hauled by locomotives. Will those locomotives, in that use, best help to win the war? Will they, in that business, relieve the strain upon the transportation system of America and thus enable the railroads here to do without new locomotives, so that Russia may have them and so that Russia may stay in the fight, and so that we shall not have, to send an additional great number of men to the western front?"

* * *

AND so with the private residence which can be done without for a year or two. If it is built, locomotives will be needed to haul the material. If it is not built, the strain upon

the American railroads will be relieved. And so with public improvements not necessary to the public welfare.

"I want to tell you briefly something about steel. Steel would have been used in that separation of the grade crossing. Of course it would. It is used in everything. It is used by every one. The civilized world cannot do without it. In times of peace it cannot do without it. In times of war, when artillery and ammunition are made and destroyed in vast quantities, when ships are built and sunk in great numbers, when railroad systems must be constructed almost overnight behind the changing battle lines—in times of war the need for steel surpasses statement."

* * *

THE Government has put Judge Lovett in charge of the distribution of steel, and a better appointment never was made."

"Do you mean, Mr. Willard, that the man with \$500, or \$1,000, or \$2,000, to buy an automobile, should stop and ask himself whether the purchase will help win the war?" he was asked. He replied:

"Exactly that, exactly that! Often he will find that the answer is in the negative. Let him lend that money to the Government. His country needs it. We have spent \$7,000,000,000, and now the Secretary of the Treasury tells us, as we read in the papers, that \$5,000,000,000 must be had. Soon we shall hear that more billions must be had. We do not know where it will stop. Neither do we know our capacity for meeting the demands. No one knows the credit of America. It has never been tested to its limits. Maybe it is \$20,000,000,000, maybe it is \$30,000,000,000, maybe it is \$40,000,000,000. We do not know. But what we do know is that the American people should prepare themselves for tremendous demands.

"The man is blind who puts his pleasure or his ambitions above the need of his country in this hour, or who deludes himself with the thought that the need is not vital. And if he puts into Government bonds the dollars which would go into something he can do without, or which, at least, can be postponed, he should have no fear that business will stagnate. Every dollar that he lends his country goes at once into industry and commerce. With all of the billions the Government has been given in these last few months it is to-day in the position of the \$60 a month clerk whose tradesmen's bills match or possibly exceed his resources."

* * *

THIS remarkable interview is hotly resented by builders and men in the building trades whose work to restore popular confidence is largely

undone by it. One widely-known Philadelphia architect, Mr. Ralph White, was moved to address Mr. Willard a letter upon the subject, couched in terms of indignant protest. Only a month or less back President Wilson made an impassioned plea for the continuance of the nation's business with as little variation as possible from normal standards. He counselled an effort to so order affairs as to have all lines of the nation's industrial life go on much as usual. Now comes along Mr. Willard with his topsyturvy advice to drop everything and build locomotives. A nation that confined its industrial activities solely to the building of locomotives and the making of munitions would soon stop. This war will be won as much by mercantile as by military organization. When it stops there is going to be a call made upon America to help rebuild Europe. When that call comes it won't be for locomotives or munitions or steel rails or passenger cars. It will be for structural steel and brick and stone and lime and cement and concrete and labor and constructive enterprise. If we all stop building now we shan't be in a position to do our share to be expected of us then. And it won't do to offer as a plea in justification that we are overstocked with, say—locomotives.

* * *

TOUCHING the unwisdom of the absence of speculative building in Greater New York, *The New York Times* observes:

"Building statistics affecting residential construction in the five boroughs during the first six months of 1917, as compared with similar period during 1916, shows a startling decline.

"It would seem that the present exceptional renting season, couple with the normal city growth and the steadily increasing demand, would stimulate building construction; but it is apparent that building costs have soared to prohibitive heights and checked continued construction.

"In Manhattan, for example, tenement and apartment house builders filed plans up to July 1, 1917, for only 21 structures, involving about \$2,471,000, as against 118 up to July 1, 1916, costing \$18,464,500. Plans for dwellings also show large declines both in number and cost.

"In the Bronx, tenement house building took a decided slump. During 1917 52 plans were filed calling for an outlay of \$3,255,000, as compared with 169, calling for \$8,667,000, for the semi-annual period of last year.

"Brooklyn shows a similar trend, although it had been predicted that progressing subway construction and the operation of the new transportation units would stimulate building regardless of

the present deterrents. Nevertheless, the first six months of 1916 show plans for 334 new tenements, costing \$7,779,000, as compared with 174, involving \$4,507,000, for this year.

"Meanwhile, New York continues to grow, and no real attempt is being made to house adequately the steadily enlarging population. Even in Brooklyn and the Bronx, where land values are still low enough to warrant the undertaking of the construction of apartment houses, builders are fearful of the steadily mounting prices of materials and the growing scarcity of labor.

* * *

DISCUSSING the situation Lawrence B. Elliman, of the firm of Pease & Elliman, said:

"The demand for residential space in buildings of practically every description is better than it has been in years. The old buildings are all rented, while the more modern structures were, in more than one instance, filled from the plans, before any tenants had even taken possession.

"From present indications, with little or no possibility of price recession in building materials and with the draft making new demands upon the labor supply, building activity along residential lines is not likely to be prominent. Government work and the expansion of manufacturing and industrial plants to meet war exigencies will hold chief places in the nation's building program.

"Residential construction, if any, will be confined to isolated cases of individual owners of high financial standing, who desire to build homes; and, here and there, to an intrepid builder who is enterprising enough to take a chance in the race against time and rising costs. As a rule, however, few will dispute the assertion that speculative building is now and will probably continue for some time to be practically at a standstill.

"But the turn is inevitable. The war cannot last forever, and the resources of the United States are vast. Declarations of peace will release the tremendous army and navy supplies for private consumption. Steel, lumber and other essentials of building construction will be available, and then real estate will come back to its own.

"Just as soon as there is the slightest tendency toward a drop in building costs and builders can reasonably assume that there will be no new price heights established, they will make an effort to capitalize the existing shortage of apartments. While temporarily depressing, the outlook is unusually hopeful. To the owner of real estate and to the prospective buyer, the future has many optimistic indications."

FROM Detroit comes the same cry of scarcity of houses. Witness the following from the *Detroit Free Press*:

"Detroit manufacturers are voicing the urging need for more houses of a type adapted to the needs of the average workman. Some authorities consider the proper housing of Detroit's great force of factory employees the city's greatest problem. From the standpoint of economics it is apparent that much exists to confirm this belief. It also is cited that in the process of eliminating the condition of congestion a stimulus will be given to real estate for an indeterminate period.

"Harry B. Warner, acting secretary of Detroit Board of Commerce, speaking on the subject from the viewpoint of the city's industrial interests, says nothing is more necessary for stabilizing Detroit's ever-growing army of workmen than the providing of individual dwelling places in sufficient numbers to meet the present great demand.

"The biggest problem before American industries to-day, and this applies specifically to Detroit, is that of labor," says Mr. Warner. "It is difficult to obtain necessary labor and sometimes even more difficult to hold the working forces together because of the house shortage. The Detroit Board of Commerce is accomplishing appreciable results in meeting this need through its housing committee, which operates in conjunction with employers in providing homes for the laborer."

* * *

FROM a real estate standpoint, statistics issued by the city department of buildings evidence that great strides are being taken toward a solution of the problem. Recently there has been a slight tendency to shorten building operations because of uncertainties in supply of building materials and in labor markets and the high cost of materials, but these conditions have had less effect on individual home-building than in most other branches of the construction business.

"Several of the largest real estate firms are entering the home-building business and are making it a part of their operations equaling in importance the subdividing of land to provide the basic home sites. Some of these subdividers are exerting efforts toward furnishing all the facilities necessary to enable lot owners to build on their property. Expert building managers, architectural facilities and means of financial construction are being provided to facilitate the movement.

"Remarks by the president of one of Detroit's largest industries may be taken as a criterion of the exact condition ex-

isting and showing the immense field for operations in this line.

"Our business is now practically contracted for several years to come," he says. "We could almost double present production if labor were procurable. The biggest drawback in obtaining labor and keeping it is the matter of providing housing facilities. In the vicinity of our main plant there is a fine open country very desirable for home sites for our workmen. It has been well subdivided and now they have commenced to build moderate cost homes that will appeal to our workers. We will give them every co-operation to stimulate this work along legitimate lines."

"Noted housing experts who have studied the local situation say there is a present need here for 20,000 to 35,000 new homes, a great percentage of which should be individual dwellings. This proves the need, say realtors, and as regards the desire and ability to pay for these homes the unprecedented prosperity of the laboring class in Detroit is cited as evidence."

* * *

AND, finally, what has Mr. Willard to say to this from the *Building Review*:

"Are we in danger of losing our heads and stopping building while the great world war is on? One does not realize what a serious happening this would be. We are prone to forget everything but the army of fighters and the army of food producers, but we must continue to think of construction work, and push it more as the war clouds gather.

"The cost of construction work must necessarily be much greater when we compare it with previous prices, yet as there is no probability of a decline in the prices of materials and labor for several years, yet we should continue to build while we fight. After the close of every great war, building has boomed. Railroads and highways are reconstructed, factories enlarged, etc., and every one feels that he wants to wait until this boom is on before investing capital, but when we think of the vast numbers who will be without work when construction ceases, it behooves us to bend every effort to keep the building work normal.

"Numbers of new enterprises projected before the war have not been built, their promoters taking the stand that it would be folly to invest capital at this time of unsettled conditions. Building investors should not hesitate with their plans, for it is this hesitation that is causing the unsettled conditions. Americans must realize that the only thing necessary is to go on attending to our own business, and be sure to have some business to attend. Railroads should spare no effort to supply the needed cars for transportation of materials."

THE Special Defense Committee of the Chamber of Commerce of the United States has sent out a statement asking for the conversion of steel. The committee outlines the needs of the government for the nation's entire output of steel, and advises that wood and concrete be used wherever it is possible. Naturally, such warnings tend to promote the wood and concrete industries. Why cannot this be true with brick, cement, lime, sand, stone, and all building materials? These industries are basic and if any action is taken that would result in their prostration, there is great danger that the government will be seriously embarrassed in financing the war.

"Already we are beginning to see no-

tices of architects closing their offices, and contractors filing bankrupt petitions. Bankers are saying that within a few months there will be no sale for municipal bonds, etc. Big factories refuse to consider improvements or enlargements, stating that they must wait until business is normal, and while we wait for a return of normal conditions, business gets less and less, conditions more and more unsettled, and capital already invested becomes insecure. There is but one thing to do. Get in behind all building operations! Push them, and thus keep business normal.

"Let us not forget that building is essential as well as fighting."

And, it might be added, living conveniences as well as—locomotives.

Otis Dockstader, of Elmira, N. Y., architect, has been appointed vice-president of the Committee on State Building Laws of the New York Society of Architects. This committee, acting in harmony with the committees of the other architectural societies, is trying to arrange a building ordinance for the State which will give all cities and towns of like size a standard building law.

* * *

The American Foundrymen's Association will hold its twelfth annual exhibit of foundry and machine shop equipment in the Mechanics' Building, Boston, Mass., September 25-28, inclusive.

* * *

Burnham Hoyt, architect, connected with the office of Bertram G. Goodhue, has been awarded the \$150 first prize offered by the Art Alliance of America for a design to advertise the second Liberty Bond issue. The judges were: Herbert Adams, president of the National Academy of Design; J. Herbert Case, Frank G. Cooper, James P. Haney, director of art in the New York City high schools; W. Frank Purdy, president of the Art Alliance of America; Lieutenant Henry Reuterdahl, U. S. N. R. F., U. S. N. Publicity Bureau; Frank A. Vanderlip and Mrs. Frank A. Vanderlip, chairman of the Poster Committee of the Federal Woman's Liberty Loan Committee.

* * *

With two or three large contracts awarded for Government work during the past week and an announcement that R. H. Macy & Co. were preparing to erect a seventeen-story addition to their department store in West Thirty-fourth street at a cost of more than \$500,000, the building situation in the Metropolitan district is confronted with a much brighter outlook. There is now a strong feeling prevalent in the industry that the building fraternity is on the eve of substantially better times than have maintained for a long period. All that was necessary to produce this change of mental attitude was a slight evidence of increased building activity, and hope was renewed.

* * *

Recently there have been numerous predictions that the conditions that have been so detrimental to structural activity would improve, and that many of the adverse factors from which the industry has been suffering were to be eliminated and replaced by others vastly more favorable to structural progress. Although this change has been long in coming, its ultimate arrival is nevertheless certain, and even now there is a firm conviction among the leading concerns in the architectural profession, backed up by a similar attitude on the part of prominent builders, that the worst of the recent depression is a thing of the past and that from this time forward working conditions should steadily improve.

* * *

One of the most important indications that conditions are better to-day than they have been, is the considerable amount of specula-

EDITORIAL NOTES

Charles M. Dill, local representative of the **Witherow Steel Company**, who has been drafted into the military service of the United States, is making preparations to leave Philadelphia by September 30th. Mr. Dill was widely esteemed in the structural trades and departs with the best wishes of a large circle of friends. The Witherow Company has not yet announced just how the vacancy created by Mr. Dill's resignation is to be filled.

* * *

Building operations in States north of the Ohio and east of the Missouri River show an increase of \$318,151,233 for the first nine months of the current year as compared to the corresponding period of 1916. The total for the present year aggregates \$1,156,176,155, which compares with \$838,024,922 a year ago, according to statistics compiled by the F. W. Dodge Company. In New York and northern New Jersey, building and engineering operations during the same period amounted to \$212,328,000 this year, against \$145,085,500 a year ago, an increase of \$67,242,500.

* * *

With steel prices soaring to prohibitive heights and with the Government demand increasing steadily to unprecedented amounts, there is considerable discussion in the building trade regarding adequate substitutes. There is a possibility that the old-time steel beam and girder will be replaced by one of reinforced concrete or masonry. There is a growing sentiment that structures of this type may be safely built, provided they are of moderate height. The popularization of cement in building construction within recent years makes such a possibility far from a remote one. In any event, American enterprise will not be daunted by a restricted supply of steel. Reinforced concrete may furnish the substitute and solve the problem.

* * *

That new mortgage money is being steadily released into Manhattan realty is evidenced

by the records of the Register's Office. From January 1 to August 23, 1917, a total of \$96,735,177 was loaned, as compared with \$70,562,813 for the corresponding period last year. Of this amount banks and insurance companies furnished \$57,403,600 this year, as against \$30,550,159 in 1916.

* * *

C. C. McDermott, Philadelphia manager of the Lord & Burnham Company, returned recently from a vacation of several weeks spent in Asbury Park.

* * *

Register John J. Hopper has received a telegram from Hon. H. L. Barfield, member of the Georgia Legislature, stating that Georgia has passed the Torrens Land Title Registration Law, introduced by Mr. Barfield. Georgia is the fifteenth State in the Union to adopt this reform. The Georgia act in its essentials follows the model act approved by the Committee of the American Bar Association.

* * *

The Abraham Lincoln monument, well known to passers-by on Union Square, New York, was erected in September, 1870, by the Union League Club. The statue is of bronze and weighs about 3,000 pounds. It is nearly eleven feet high. The pedestal, which is twenty-four feet high, weighs forty tons.

* * *

The American Iron and Steel Institute will hold its autumn meeting at the Hotel Sinton, Cincinnati, October 26 and 27.

* * *

Thomas Bennett, architect, has moved his office from 5123 Third avenue to 7824 Fifth avenue, Brooklyn.

* * *

Charles E. Knox, 101 Park avenue, Manhattan, is the consulting engineer for the elevator and electrical equipment of the new Union Trust Company building, Pittsburgh, Pa.

tive work that has come to light during the last few days. Many architects are busy upon the plans for work of this nature, and there is every likelihood that a large percentage of the operations will proceed at an early date. At the present writing there is more work of this character noticeable than there has been for a long time and leads to an impression that renewal of building of this type is about to be started on a large scale. Speculative building has been the one type of building operation mostly effected by the high cost of materials and supplies maintaining throughout the past year, and now that there are important recessions from the existing price levels within prospect, speculative work has taken on a much better tone.

* * *

The market for structural materials and supplies is extremely spotty. Although a majority of commodities have held firmly to their price levels, sales have been comparatively light. Inquiries for future deliveries in certain lines have picked up, however, and there is much hope being registered from this quarter. The steel market is almost inactive and there is no improvement in sight until the anticipated announcement of the action of the Government in regard to control of output and price is released. Builders contemplating improvements requiring steel in any quantity are holding off, feeling that through Governmental action steel will be obtainable at a figure considerably lower than those being quoted at the present time. The brick market is stable with prices sustained. Cement, lime and other mason's materials are firm and not likely to fluctuate greatly under the present conditions.

* * *

The building interests, as well as all other lines of commercial and industrial activity, have begun to feel the effects of the mobilization of the new National Army. Some time ago the National Guard of all States was mobilized, and with this movement a large body of men was taken out of civil employment, the building and allied trades sustaining their share of the depletion. Already some of the men called by the terms of the selective draft have started upon their journey to their respective training camps, and this has further depleted working forces and aggravated a labor condition that at best was almost intolerable by virtue of the scarcity of men. The building trades are now confronted with the necessity of adjusting themselves to the new conditions brought about by the resignations of the men called to the colors.

THE BUILDING SITUATION.

Close observation of business conditions among farmers and in farming communities shows that the farmer this year is realizing more per acre than perhaps at any time in his history. There never were such prices for grain, stock, and other farm products. The contention is made by some farmers that in spite of the fact that prices are high, they

are compelled to pay higher prices for all materials. Comparison, however, of the buying power of the farmer's dollar to-day, with its buying power when building materials were cheaper, shows that, relatively, building material is far cheaper to-day than during times of low prices for farm products. There is, therefore, no argument for discontinuing new construction.

The big industries who are now enjoying profitable and successful business, much increased in size, of course, over previous years, are seeing fit to spend vast sums for extensions to their businesses and improvements in buildings, and the like. The farmer is a business man, and should be able to learn a lesson from the assembled brains of managers of big corporations. If the time is ripe for them to spend their profits for new construction and extensions, is it not also timely for the farmer to do likewise?

* * *

A building is very much like a suit of clothes. In times of stress a man will tell the repairer of old clothing to "do his best" and will make a suit answer the purpose for a little longer than usual; but there comes a point beyond which he dare not go unless he is willing to let himself slump into the class of the hopelessly seedy. Even so, buildings are constantly wearing out and must be replaced if we hope to keep up our present stage of civilization.

One keen-visioned man says that if the present rate of procrastination in building is continued, the country will be three years behind in building when the war is over, and then it will be next to impossible to catch up. But that is something which will not be permitted, we are sure. People are beginning to analyze the situation more carefully, with the result that they are not able to see ahead any better time than the present to build their homes.—"National Builder."

NEW MODEL CITY AT PORT WENTWORTH, GA.

Details of the model town shortly to be erected at Port Wentworth, a few miles outside of Savannah, Ga., have been made public by William Morris Imbrie & Co., New York, who have financed several industrial concerns located at this point and who are responsible for the new city.

Charles W. Leavitt, a New York landscape architect and civil engineer, has prepared the plans of the city and the actual work of construction will be carried forward under his direction. Mr. Leavitt has recently completed model cities at Wilmington, Del.; St. Helena, Md., near Baltimore, and at other points.

Port Wentworth City will be erected to provide convenient and comfortable homes at a nominal expense for the workmen and families of the employees of the various enterprises established at the near-by Port Wentworth Terminal, which is owned by the Savannah and Atlanta Railway.

The plan of the city, which will have its

own water supply, sewerage system and lighting plant, calls for a white and negro village on opposite sides of the Savannah River, with separate schools, community stores, churches, parks, and moving picture theatres. All the cottages will be of frame construction, the materials being cut on the property by the Port Wentworth Lumber Company, and in the white village will be of Colonial style of three, five, six and eight rooms. In the colored district there will be 250 two-room bungalows. Two modern hotels will also be erected in the main city for the accommodation of transients.

Open air school classes for the children will be one of the modern ideas introduced at Port Wentworth City.

The care taken to provide this model city with all the modern attributes at a lower expense to employees than could be secured otherwise, is expected to go a long way toward solving the ever vital problem of adequate labor supply.

WHY CEMENT COSTS MORE.

This comment on the higher price of cement comes from the Portland Cement Association: In connection with the advance in the prices of building materials in the last two years, information reaches the public occasionally which indicates that the manufacturer, in dealing with labor and raw materials, has the vexing problem of high prices before him quite as well as the consumer.

One manufacturer of cement, in discussing his difficulties, said:

"As compared with 1915, cost results for January, 1917, show that coal for power and burning was 25 cents higher per barrel for finished cement. In other words, the amount we are obliged to pay for fuel now has increased the cost of manufacturing a barrel of cement 25 cents, as compared with the early part of 1915. We are paying 35 per cent. higher wages, which has increased the cost of manufacturing cement several cents per barrel. All repair and renewal material has increased in cost by percentages varying from 30 per cent. to 250 per cent. The increase in the cost of insurance, due to the general adoption of the compensation insurance, and the increase in taxes, have also added to our cost of doing business 1 cent per barrel. We have been compelled to pay higher salaries. Our operating costs are considerably higher than formerly by reason of frequent interruptions due to shortage of cars and delays in transportation. All of these factors and the general increase in the cost of all items entering into the problem of manufacturing cement have vexed the cement makers and have compelled them to charge more for their product, a situation which is not at all relished by them because of the fact that one of their most prominent arguments for the use of concrete is not only its economy and permanence, but its relative low cost as compared with other materials which for many purposes are rivals of concrete."

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Bakery (add.), 1729 South Twelfth street, Philadelphia. Architect, J. Elvin Jackson, 721 Walnut street, Philadelphia. Owner, Frank Burseo, 1727 South Twelfth street, Philadelphia. Brick, 1 story, 16x57 feet, slag roof, cement floors, electric lighting, hollow metal skylights. Plans completed. Owner taking sub-bids.

Residence (alt. and add.), 243-45 South Camac street, Philadelphia. Architect, R. H. Pepper, 1808 North Seventh street, Philadelphia. Owner, name withheld. Brick and stucco front, third floor addition, 31x32 feet and third story addition, 8x14 feet, tin roof, pine floors, electric lighting, waterproofing. Architect taking bids, due September 22d. F. B. Davis, 240 North Sixteenth street; H. E. Baton, 1713 Sansom street; Frank G. English, 1610 North Carlisle street; Kirk & Reid, 321 South Juniper street; Robert Merkel, 633 North Park avenue, and Chas. S. Frank, 1113 Cherry street, Philadelphia, are figuring.

Steel Plant, Tacony, Philadelphia, \$380,000. Architect, Thos. B. Lippincott, 1505 Arch st., Philadelphia. Owners, Tacony Ordinance Corp, Tacony, Philadelphia. Brick and steel, hollow tile and concrete and A. P. M., 1 story, machine shop, 270x130 feet; treating shop, 135x102 feet; forge shop, 136x210 feet; open hearth shop, 189x105 feet, slag, asbestos and asphalt roof, composition and wood block floors, rolled steel sash, hollow metal sash and doors, ornamental iron work. Architect has received bids.

Bank Building, northeast corner Fifth and Tabor road, \$50,000. Architect selected, John H. Bothwell, Geneva avenue and Westford road, and John T. Brugger, 5610 Mascher st., Philadelphia. Owners, Olney Bank, on premises. Limestone and terra cotta (fireproof), 1 story and basement, 40x80 feet. Plans in progress. Architects ready for bids October 1st.

Service Building, northeast corner Twentieth and Erie avenue, Philadelphia. Engineers, Watson & Co., Cleveland, Ohio. Owners, White Motor Car Co., J. D. Howley, Philadelphia manager, 216 North Board street, Philadelphia. Brick and steel, 1 story, 100,000 square feet, slag roof, steam heating, electric lighting, cement floors, gasoline storage system. Plans about completed. Owners will take bids in a week.

Office and Bakery (alt. and add.), 1449 N. 12th st., Phila. Architects, Ballinger & Perrot, Seventeenth and Arch streets, Philadelphia. Owners, Philadelphia Homemade Bread Co., on premises. Brick, 3 stories, 13x40 feet, slag roof, pine and composition floors, hollow tile, metal lath, rolled steel sash (heating, plumbing and lighting reserved). Architects taking bids, due September 19th. Sutton & Stephenson, 1317 Washington avenue; F. L. Hoover & Sons, 1023 Cherry street; Robert E. Lamb Co., 1314 Arch street; Philip Haibach Cont. Co., Twenty-sixth and Thompson streets; Ket-

cham & McQuade, 1029 Brown street; H. E. Baton, 1713 Sansom street; John N. Gill & Co., Otis Building; F. B. Davis, 240 North Sixteenth street, and Barclay White & Co., 1713 Sansom street, Philadelphia, are figuring.

Garage, Logan, Philadelphia. Architect, Wm. H. Wooters, 816 W. Allegheny avenue, Philadelphia. Owner, name withheld. Brick, 1 story, 20x40 feet, slag roof, hot water heating, electric lighting, cement floors. Plans about completed. Architect ready for bids.

Theatre, southwest corner Nineteenth and Market street, Philadelphia, \$500,000. Architects, The Hoffman Co., Finance Building, Philadelphia. Owners, Stanley Realty Co., Juniper and Market streets, Philadelphia. Brick, stone, steel and terra cotta, 1 story and balcony, 142x170 feet, slag roof, electric lighting, metal lath, fire doors, tile and marble work, cement floors. Revised plans about completed. Architects ready for bids in a few days.

Bank Building, 9 South Fifty-second street, Philadelphia. Architects, Peuckert & Wunder, 310 Chestnut street, Philadelphia. Owners, Guarantee Trust and Safe Deposit Co., 316 Chestnut street, Philadelphia. Limestone and granite, bronze trimmings, 1 story, 15x67 feet, slag roof, hot water heating, electric lighting, marble floors. Architects taking bids, due September 21st. The following are figuring: A. H. Williams' Sons, 419 Locust street; Stacy Reeves & Sons, 2011 Market street; John N. Gill & Co., Otis Building; Philip Haibach Cont. Co., Twenty-sixth and Thompson streets; J. Sims Wilson Co., 1125 Brown st.; Metzger & Fisher, Otis Building, and F. M. Buchanan, 403 Spruce street, Philadelphia.

Recreation Pier No. 57, Penn Treaty Park, Philadelphia. Architect, private plans. Owners, City of Philadelphia, Department of Wharves, Docks and Ferries, Geo. S. Webster, Director, 550 Bourse Bldg., Philadelphia. Reinforced concrete, steel, timber and wood pilings, double deck, 70x295 feet, bulk head, A. P. M. and concrete roof, asphalt paving, cement and pine floors, rolled steel sash, kalamein and steel rolling doors, ornamental iron work, metal lath, safety treads, waterproofing, wire work. Owners taking bids, due September 28th. Armstrong & Latta, Land Title Building, and Snare & Triest Co., Pier 79, South Wharves, Philadelphia, are figuring.

Residence and Garage (alt. and add.), 1103 Sixty-ninth avenue, Oak Lane. Architect, C. E. Schermerhorn, 430 Walnut street, Philadelphia. Owner, John D. Williamson, Jr., on premises. Stone and brick, 1 story addition, 18x18 feet; garage, 1 story, 12x18 feet, slate and tin roof, canvas, concrete and pine floors, hot water heating, electric lighting, tile and marble work and terrazzo work. Architect taking separate bids on plumbing, hot water heating and tile work. Architect taking general bids, due September 25th. Specht & Sperry, Heed Building; James Bartleson, Am-

bier, Pa.; C. E. Lloyd, Jr., Eighth street and Sixty-sixth avenue; Edw. B. McCall, Sixty-fifth and Park avenues, and W. John Stevens, inc., Wyncote, Pa., are figuring.

Garage, 6405 North Sixth street, Philadelphia. Architect, private plans. Owner, Lee Harris, 6405 North Sixth street, Philadelphia. Brick, 1 story, 12x16 feet, slag roof, cement floors, electric lighting. Owner taking bids, due September 21st. J. Sims Wilson Co., 1125 Brown street, and H. H. Wehmeyer, 1004 W. Lehigh avenue, are figuring.

Residence (alt. and add.), Gowen avenue and Ardleigh street, Mt. Airy, Philadelphia. Architect, Geo. S. Idell, 34 South Sixteenth street, Philadelphia. Owner, Frank P. Brooke, 7420 Boyer street, Philadelphia. Stone, 2½ stories, 2 story frame porch addition, slag roof, hardwood floors, tile work (plumbing, vacuum heating, electric work and composition floors reserved). Architect has received bids.

Power Plant No. 4 (alt. and add.), Sixth and Columbia avenue, Philadelphia. Engineers, Day & Zimmerman, 611 Chestnut street, Philadelphia. Owners, Henry A. Sheip Mfg. Co., Sixth and Columbia avenue, Philadelphia. Reinforced concrete and brick, 5 stories, slag roof, cement floors, hollow metal sash and skylights and doors, fire doors, waterproofing. Owners have received bids.

Power Plant, Thirty-fourth and Pine sts., Philadelphia. Architect, Philip M. Johnson, Land Title Building, Philadelphia. Owners, Phila. General Hospital, care of Dr. Wm. Krusen, 584 City Hall. Brick and stone, 1 story, 158x33 feet, 50x52 feet and 88x80 feet, slag roof (steam heating, plumbing and electric work reserved), marble and terrazzo work, rolled steel sash and skylights, hollow metal sash, cement floors, metal lath, fire and kalamein doors, iron stairs, ornamental iron work, dampproofing. Low bidders: Standard Const. Co., 1713 Sansom street, \$238,600; Warren, Moore & Co., Colonial Trust Building, \$252,000.

Factory, Tioga and Richmond streets, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owners, Girard Smelting and Refining Co., on premises. Brick and steel, 2 stories and basement, 41x112 feet, slag roof, steam heating, electric lighting, cement and yellow pine floors, pivot sash, electric elevator, metal marquise, fire doors. Plans completed. Owners ready for bids.

Shop, 1521 South Marshall street, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, H. Barkan, on premises. Brick, 2 stories, 18x34 feet, slag roof, yellow pine and cement floors, electric lighting. Owner ready for sub-bids.

Garage, 431-33 Lombard street, Philadelphia. Architect, I. W. Levin, 2434 S. Eighth street, Philadelphia. Owner, M. Levin, on premises. Brick and steel, 2 stories, 32x70

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

When Buying a Home

insist that the house is piped throughout for gas so you can take advantage of the ease and economy of cooking, heating water and ironing with gas.

And a Baseboard Gas Outlet in each room is just the thing for connecting floor or table lamps and also provides a ready means for using gas heating stoves in the early Fall and late Spring when it isn't practical to have the house heating system going all day and night.

SURE.

Stick to your work, forget the mob
Avoid the discontented throng;
For, if you're always on the job
Success is sure to come along.

It's the Long Fire Travel in the Burnham Cosy Comfort Boiler That Makes the Short Coal Bill

If you can keep the hot gases and smoke travelling back and forth inside a boiler long enough to extract the bulk of their heat, and still not make the draft sluggish; it's plain enough that less heat will go up chimney and more heat go into your radiators. That back and forth action is what we call fire travel. It's this long fire travel in the BURNHAM Cosy Comfort Boilers that has a lot to do with making their short coal bills.

Our Engineering Department is at your service in solving Heating Problems

RISE IN PRICES OF MATERIALS.

Following is a list of the principle materials used in the heating industry, showing the increase in the cost of same up to May, 1917, as compiled by the "Gas Institute

Per Cent of
Increase.

Bituminous coal	86.6
Anthracite coal	18.6
Gas oil	63.9
Oxide	58.3
Copperas	50.8
Sulphuric acid	48.6
Wrought iron pipe	106.3
Wrought iron pipe—extra heavy....	30.6
Cast iron pipe	58.8
Steel pipe	57.1
Malleable iron fittings.....	75.0
Cast iron fittings—3 inch red. T...	58.8
Cast iron castings	52.2
Bolts and nuts	160.3
Brass pipe—extra heavy.....	147.4
Sheet brass	110.3
Copper rods	142.9
Sheet copper	136.8
Sheet lead	57.1
Sheet iron	25.0
Cold rolled steel	200.0
Open hearth steel	150.0
Tool steel	66.6
Plow steel hoisting cable.....	125.0
Brass cocks—1½-inch T handle.....	87.6
Kennedy valves	55.4
Packing—Crandall No. 30.....	20.4
Packing—Peerless flax	57.1
Mill board	33.3
Linseed oil—raw	92.2
Dynamo engine oil	13.3
Cylinder oil	38.9
Mill wipers	27.3
White waste	42.9
Lead wool	37.5

SPEEDY TIMBER WORK.

An example of the speedy construction possible with wood is that of the building of the quarters for the Reserve Officers' Training Camp at Fort Sheridan during the first ten days in May. 400,000 feet of the shipment

was run through the planing mills of the lumber company, and also loaded on cars in the same day.

The trainload of lumber was delivered at Fort Sheridan on Tuesday morning, May 1. The construction company had its force on the ground equipped with gasoline saws and all other devices for quick work. Ohio National Guard engineers staked out the streets and buildings. The job was finished May 10, in just ten working days, using only one shift per day. The largest number of men employed on the job at one time was 785. They built complete, ready for occupancy: 42 barracks, 20x126 feet each; 21 mess buildings, and 21 lavatory buildings, both fully equipped; 1 post exchange building, and 1 telephone exchange building.

Quick work of the same character has been done at Fort Benjamin Harrison, Indiana; at Fort Oglethorpe, Georgia, and other points. At Fort Oglethorpe, 136 buildings were erected in 12 days.

A SCHEME TO PRODUCE ARTISTIC BUILDINGS.

One method of accelerating the artistic impulse, and one that would seem to offer great possibilities, has, says the "American Architect," been adopted in the South American city of Buenos Ayres. That municipality exempts from taxation each year the most beautiful building erected during the preceding twelve months, and in addition awards a medal to the architect. A more direct form of encouragement, or one that would possess a greater appeal for the average owner, it would be difficult to devise. It is possible that the decoration of the architect may be unnecessary to the success of the plan, but doubtless it is with the idea of taking cognizance rather than paying a reward that the medal is bestowed. The plan might well receive consideration by municipalities in this country. Then, possibly, the average citizen would learn to appreciate the inherent as well as the commercial value of good architecture to an extent that might render unnecessary the offer of any special prize or distinction to induce him to co-operate in the production of architecturally meritorious buildings.

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.
DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

INCLOSED PORCHES

For Winter and Summer

Specially designed to conform with the architecture of the residence. Special quotations on heating and lighting Inclosed Porches.

Diamond 900 Bell or Postal to

SAMUEL B. MAC DOWELL & SON

1927 W. Montgomery Avenue, Philadelphia, Pa.

ARCHITECTURE AND THE WAR

Let us look a little at what the war is compelling builders and architects to do. Has it not always been an axiom of the artistic world that to develop the art instinct the artist must travel? He must see the work of other countries, must compare it with what he finds in his own; he must bring back with him sketches of what he finds beautiful and appropriate, and in designing for his own country substitute or combine as his judgment dictates. In the years when architecture was a living art this was an essential part of the architect's education, and the best architects were invariably those that had enriched their knowledge with a liberal study of the art of foreign countries. With the great increase in numbers in the profession the proportion of those that have studied outside their own country has fallen greatly; they are content with the study of sketches and photographs now so freely circulated; the time and expense of foreign study are saved; the result is a cramping of the art. But what the profession had ceased to do for itself the war is doing for the profession. It has caught up the profession bodily and carried it out to fight in France, in Belgium, in Italy, in Greece, in the Balkans, in Turkey, in Egypt, in Mesopotamia, even in India.

Architects in great numbers have now observed some of the works of these countries and cannot have seen them without learning something from them. They have lived among these works, have experienced the climate and seen the atmosphere in which they exist, and so have learned at first hand the why and wherefore of their specialties. Such men must naturally return home with a greatly widened view of their profession; their education in the fitness and appropriateness of features in design must be very much extended; they are not likely to slip into incongruity; nor will they be blind to opportunities of introducing forms and features in their work that have impressed themselves on the mind abroad but could not be so much as seen at home. It is they who must be look-

ed to to break down the barriers that have circumscribed the art of home, just as we look to seasoned soldiers to storm the trenches.

Why do we not get beyond the eternal round of Renaissance in our public buildings, of a bastard Gothic in our ecclesiastical architecture, and of a modified mediaeval style in our domestic building? It is because we are hide-bound by convention and lack the courage to break through. Courage comes from conviction; those who have seen, have experienced, and been convinced of new possibilities in architecture, may now take the lead, and as there has sprung up a strong feeling that the after-war world must be more cosmopolitan, so, let us hope, that same world will see some more cosmopolitanism in architecture. For, after all, the truest definition of architecture is that it is an expression in form of a people's feeling.—"Indian Engineering" (Calcutta).

DO IT NOW.

All we have is just this minute

Do It Now.

Find your duty and begin it

Do It Now.

Surely you're not always going

To be "a going to be," and knowing

You must sometime make a showing.

Do It Now.

Don't try to see out of some other man's eyes when you've got a pair of your own,—use them and go over every job carefully before you consider that you are through with it, and don't forget that one "good job" is a better advertisement than many poor ones.—Exchange.

The trouble with some advertising is that it is like the conversation of certain people—it never says anything.—"Novelty News."

DUTIES AND OPPORTUNITIES PRESENTED TO AMERICAN MANUFACTURERS BY THE WAR.

Modern war creates tremendous activity—it calls into use every material resource of a country—its whole machinery of production and distribution. A little over three years of world war have brought to this country a volume of business, the like of which we have never before known. Our power to produce has been taxed to the limit. Constructive effort—constructive selling—has often had its mettle tested during that time. Greater opportunities—greater tests are at hand.

Since it has been true that with our country at peace our prosperity has been unprecedented, what will it be with our country at war, with every effort being put forth to win? Billions of dollars bonds have been voted to pay for huge purchases of supplies. The billions of dollars provided for in the joint loan and revenue budget of the Government are equal to the total value of our enormous export trade during the past 18 months. The effect of putting this huge sum into circulation will be colossal. Its effect upon factories, warehouses, arms of transportation, are almost inconceivable at the moment.

Prosperity in all industries producing the necessities of life—food, clothing, munitions, utensils and supplies, will be limited during the next twelve months only by capacity to produce and transport. Industries producing the non-essentials may languish. From them both capital and labor may be diverted.

The farmer will produce mammoth crops. He will need quantities of wagons, trucks, plows, harrows, reapers, tractors and binders. And he will have the money to pay for them. His annual cash income has lately averaged about \$1,500. The Government estimates that in the next twelve months it will be \$2,500. Think of the purchasing power of 6,500,000 farms.

Will American business men be ready? Will they have the factory and storage capacity, the transportation facilities, to take care of this flood tide of business? Will they prepare constructively on a scale which will give full play to output with minimum waste? Or, will they drift day by day from hand to mouth in a spirit of shortsighted fear and wait for the deluge to engulf them?

The time to build is now, before materials run short, transportation becomes still more congested and labor is drafted into military service.—J. P. Bock, before the World's Salesmanship Congress.

AIR MOISTENING DEVICE FOR WARM AIR FURNACES.

A novel scheme for securing the proper degree of moisture in connection with the use of a warm-air furnace has been proposed by

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

a member of the engineering division of the Iowa State College.

A slot 4 inches lang and $\frac{1}{2}$ inch wide, with the long dimension horizontal, was cut near the top of the galvanized iron furnace jacket directly over the evaporation pan. A strip of wire cloth 8 inches wide and 4 feet long was folded lengthwise through the center. A sheet of asbestos the same size was then folded in the same way. The paper was then placed between the two layers of wire cloth and sewed in place, using a wire drawn from the edge of the cloth.

This combination strip was then slipped in the hot air chamber through the slot in the furnace casing until the lower end of the strip could be drawn into the evaporating pan near the furnace bottom. The upper end of the strip was opened for a funnel.

A connection was then made in the water pipe in the furnace room and pet cock installed in this connection just above the funnel in the upper end of the combination strip. Water allowed to drip into the funnel saturates the upper end of the asbestos strip. The length of the strip depends upon the rate of supplying water and temperature within the hot air chamber. In case water is supplied more rapidly than evaporated the excess collects in the evaporation pan below. As the weather moderates the amount of water supplied the moistening apparatus should be decreased or shut off.

In case water cannot be had in the furnace room a pail filled once a day with water can be supported by a hook placed in a floor beam above the furnace. The pail should have a hole punched in the side near the bottom and a pet cock soldered over the hole. Water can then be allowed to drip slowly through a piece of small hose into the funnel at the upper end of the asbestos strip.

A small hygrometer should be hung near a thermometer in one of the rooms. If a humidity of 30 per cent. to 40 per cent. is maintained the temperature of the room can be kept at 3 to 5 degrees lower with more comfort than if the humidity is allowed to fall to 5 per cent. or less.

THE GLASS INDUSTRY IN JAPAN.

The glass manufacturing industry has made rapid strides in Japan and the export value of 1912 was estimated at 3,068,000 yen, while that of 1916 was 10,397,400 yen, an increase of over three times the former figure. The chief destinations are in the Far Eastern and Australian markets. Since the beginning of the war the demand has advanced to a large extent and there is all possibility for a continuous demand even after the war. It will be wise for the Japanese manufacturers therefore to be careful of what they ship from now on, since the crude make of goods may create a bad impression on the consumers.

In order to prepare now for future rivalry

the Department of Agriculture and Commerce has called together the manufacturers of glass goods of the nation and asked for an organized body of manufacturers. The chief purpose of the group is to inspect all goods to be exported. The standards of inspection will be from all goods for the use of the natives in the markets of China, the South Sea and Australia. At the same time many changes will be attempted so as to satisfy the demands of the consumers. In so doing a strict

inspection must be carried out with the joint action of the nation and the Government.—“The Chamber of Commerce Journal” (Yokohama).

Advertise! The minute you stop advertising you lose ground. You may not feel this loss right away. But you must feel it in the end. Advertising is the dynamo of modern business.

Permits for New Buildings

O is the abbreviation for owner. C is for contractor.

Philadelphia

Office Building, 222-26 Walnut street, \$40,000. Mather & Co. (O), 226 Walnut street. A. R. Raff Co. (C), 1635 Thompson street. Brick, 1 story, 35x137 feet, slag roof.

Power House, Twenty-sixth and Forty-fifth avenue, \$31,000. Girard Point Storage Co. (O), Broad Street Station. John N. Gill Co. (C), Otis Building. Brick, 1 story, 34x44 and 16x17 feet, slag roof.

Factory, 1315-17 Vine street, \$8,400. The Auto Radiator (O), 1317 Vine street. Frank Lucci (C), 1603 Ellsworth street. Brick, 2 stories, 30x80 feet, slag roof, steam heating.

Garage, 309 Graham street, \$400. D. A. Kerr (O), 308 North Redfield street. C. White Co. (C), 511 North Sixty-third street. Brick, 1 story, 12x17 feet, slag roof.

Garage, Sixty-first and Chestnut streets, \$1,000. Bobrow Bros (O). N. Raidman (C), 5944 Walnut street. Brick, 1 story, 20x19 feet, slag roof.

Shop, Worrell and Orthodox streets, \$300. D. Denafa (O), 4613 Hodge street. A. La Rose (C), 251 South Twelfth street. Brick, 1 story, 14x33 feet, slag roof.

Dwellings (2), Franklin and Loudon streets, \$6,000. Bauerle & Erney (O and C), 4301 N. Seventh street. Brick, 2 stories, 15x48 feet, slag roof, hot water heating.

Dwellings (2), 1209-11 Wakeling street, \$10,000. C. West & Co. (O and C), Oxford Pike and Wakeling street. Brick, 3 stories, 16x47 feet, slate roof, hot air heating.

Garage, Genwood and Dauphin street, \$2,200. Geo. Nass & Son (O), on premises. D. Henwood (C), 1509 Wood street. Brick, 1 story, 24x32 feet, slag roof.

Dwelling, 921 Catharine street, \$2,500. Mrs. M. Sorrentino (O), 915 Catharine street. M. Sorrentino (C). Brick, 3 stories, 16x43 feet, slag roof.

Freight House, Noble and New Market sts., \$50,000. P. & R. Ry Co. (O), Twelfth and Market streets. A. L. Carhart (C), Hale Building. Steel and slow burning mill construction, 1 story, 129x83 feet.

Shop Building, Twenty-sixth and Forty-fifth avenue, \$27,000. Girard Point Storage Co. (O), Broad Street Station. John N. Gill Co. (C), Otis Building. Brick, 1 story, 52x93 feet, slag roof.

Dwellings (3), Mansion avenue and Leverington street, \$3,600. M. H. Keller, Jr. (O), 326 Dupont street. Wm. E. Keller (C), 480 Harmon road. Brick, 2 stories, 16x23 feet, slag roof, hot air heating.

Dwellings (6), Castor avenue and Herbert street, \$24,000. John Frothingham (O and C), 3367 Frankford avenue. Brick, 3 stories, 16x43 feet, slate roof, hot air heating.

Dwelling, 1300 Harrison street, \$10,000. Harry C. Zeisig (O), on premises. John Frothingham (C), 3367 Frankford avenue. Brick, 2 stories, 21x65 feet, slate roof, hot water heating.

Dwelling, 723 Pine street, \$900. H. V. Cohen (O), on premises. John Friendly (C), 1023 Windrim avenue. Brick, 1 story, 18x20 feet, slag roof.

Dwellings (4), Silverwood and Hermitage streets, \$8,800. J. J. Edelstein (O), 2821 N. Twenty-third street. Wm. E. Kelli (C), 480 Harmon road. Stone and brick, 2 stories, 14x41 feet, slag roof, hot air heating.

Alterations and Additions

Store and Dwelling, Fifth and Federal sts., \$400. M. Kekelman (O), on premises. J. Vidofsky (C), 2023 South Eighth street. Alterations.

Coal Storage, 2417 East York street, \$500. H. N. Butterworth & Co. (O), on premises. Robert Beatty & Bro. (C), 2321 East Fletcher street. Fire repairs.

Wagon Shed, 328-30 North Fifth street, \$500. A. B. Lyster (O and C), 324 North Fifth street. Alterations to one-story shop.

Coal Pocket, Glenwood avenue and Broad

street, \$2,000. Kerr Hueftle Coal Co. (O and C), 2925 North Broad street. Alterations to pocket.

Dwelling, 730 W. Rising Sun avenue, \$1,200. Adolph Weicht (O and C), on premises. Brick, 3 story addition, 16x58 feet, slag roof.

Garage, Twenty-third and Ingersoll streets, \$900. Freihofer Baking Co. (O). Twentieth and Indiana avenue. Philip Haibach Cont. Co. (C), 1261 North Twenty-sixth street. Alterations.

Store and Dwelling, Sixth and York streets,

Our specialty is Portland Cement that will stick and pass the City Department. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

\$1,200. Fell's Est. (O), Seventy-first and Woodland avenue. Thayer & Co. (C), 1233 Ludlow street. Alterations, new flush bulk.

Store and Dwelling, 1914 South Sixth st., \$800. Harry Raffe (O), 2322 South Seventh street. Max J. Benamy (C), 3042 York street. Alterations.

Dwelling, 815 North Seventeenth street, \$800. Mrs. E. Gallagher (O), 610 North Seventeenth street. A. H. Landay (C), Gratz and York streets. Alterations.

Factory, Fox and Allegheny avenue, \$1,000. Alfred Wolstenhome & Sons Co. (O), Twenty-fourth and Allegheny avenue. John Platt (C), 108 Kalos street. Brick, 1 story, 55x24 and 16x34 feet.

Apartments, 1500 North Gratz street, \$500. S. Benzett (O), 308 Hale Building. F. Gray (C), 1831 North Twenty-second street. Steam heating system.

Dwelling, 1626 South Fourth street, \$300. Max Brett (O). Frank Donato (C), 1423 S. Eighth street. Brick, 12x10 feet, slag roof, 1 story.

Poultry Store, 326-28 North Water street, \$1,800. S. Fuguet (O), 312 Bullitt Building. H. Guenzel (C), 410 Buttomwood street. New brick front.

Dwelling, 1227 South Forty-ninth street, \$360. Robert Conner (O). Geo. C. Lyon (C), 631 South Forty-second street. Brick, 1 story, 13x11 feet.

Dwelling, 933 Watkins street, \$375. G. Giordano (O), on premises. A. De Marco (C), 1224 Christian street. Brick, 2 stories, 11x10 feet, slag roof.

Store, Fifteenth and Chestnut streets, \$3,500. Bonvitt, Teller Co. (O). Thirteenth and Chestnut streets. Basch & Co. (C), 1420-36 South Front street. Flush bulk and alterations.

Store, 1114 Chestnut street, \$900. John Stafford (O), on premises. Basch & Co. (C), 1420 to 36 South Front street. Flush bulk.

Store, 1204 Chestnut street, \$1,200. Schmollie Co. (O), on premises. Basch & Co. (C), 1420-36 South Front street. Flush bulks.

Garage, Sixty-second street and Lansdowne avenue, \$700. Chas Bonfig (O), on premises. A. Verdi (C), 6145 Girard avenue. Brick, 1 story, 7x15 feet, slag roof.

Dwelling, 3605 Powelton avenue, \$900. M. I. Crane (O), on premises. James F. Hallman (C), 521 Vine street. New hot water heating plant.

Dwelling, 239 E. Haines street, \$350. Chas. Cavallo (C), 5845 Osceola street. Brick, 3 stories, 16x16 feet, slag roof.

Store and Dwelling, Pike and Fairhill sts., \$1,000. P. T. Amsterdam (O), on premises. Nicholas Carvo (C), 2828 Van Pelt street. Brick, 1 story, 17x10 feet, slag roof.

Dwelling, 126 Pemberton street, \$1,500. Antoni Lichorobice (O), on premises. M. Cinollo (C), 824 Dickinson street. Brick, 2 stories, 10x22 feet, slag roof.

Dwelling, Worth and Kinsey streets, \$500. Wm. Shalloross (O), Paul and Sellers streets. New walls on side.

Bank, 427 Chestnut street, \$3,000. Farmers & Mechanic Bank (O). James H. Wilson (C), 1717 Moravian street. Brick, 1 story, 5x32 feet, tin roof.

Store and Storage, 1911 Chestnut street, \$7,800. Joseph Habesreitering (O), 1604 Chestnut street. Wm. Chas. Doll Co. (C), 201 North Broad street. Alterations.

Store and Dwelling, 754 South Front street, \$600. E. W. Clark (O), 613 Locust street. Oesavia Hillasso (C). New cellar way.

Dwelling, Wayne avenue and Lincoln drive,

\$1,200. J. J. Donnelly (O), on premises. John J. Hentley & Co. (C), 4416 Cresson street. Brick, 3 stories, 10x28 feet, tin roof.

Garage, Martha and Harold streets, \$300. H. A. Fricha (O), on premises. J. H. Gordon (C), 2314 E. Lehigh avenue. Brick, 1 story, 15x18 feet, slag roof.

Store and Dwelling, 5515 Chester avenue, \$775. D. F. Reichert (O), Treverton, Pa. J. A. Codori (C), 1235 Arch street. Extend bulk front, 1 story, 16x3 feet.

Dwelling, 1700 Westmoreland street, \$500. Mrs. Kate Keachline (O), on premises. Harry Keachline (C), on premises. Alterations.

Dwelling, 427 E. Rittenhouse street, \$1,000. A. Mella (O and C), on premises. Brick, 3 stories, 16x7 feet, slag roof.

Dwelling, 1411 North Thirteenth street, \$800. Mrs. Felitorzer (O), 1429 North Thirteenth street. J. F. Trent (O), 2041 Master street. Alterations.

Garage, 2445 North Eighth street, \$1,050. C. A. Kenan (O), 721 W. Cumberland street. H. C. Zingroff (C), 2527 North Seventh street. Alterations from stable to garage.

Dwelling, 1915 Green street, \$1,100. Ogden D. Wilkinson (O), 2010 Walnut street. Chas. Platt (C), 1015 Arch street. Brick, 3 stories, 8x9 feet, slag roof.

Passenger Station and Officers, Twenty-fourth and Chestnut streets, \$5,500. Schuyllkill River East Side R. R. Co. (O), on premises. Frame Bros. (C), Baltimore, Md. Elevator shaft from second to fourth floors.

Theatre, Broad and Cherry streets, \$1,000. Lurie Theatre (O), on premises. F. W. Van Leon (C), Denckla Building. Plumbing and alterations, new doorway.

Shop, 3111 Grays Ferry road, \$3,000. Lutz Co. (O and C), on premises. Iron on iron, 1 story, 37x40 feet.

Store and Dwelling, 1804 South Fifth st., \$150. M. Wiselmad (O), on premises. Ike Gold (C), 2028 South Fifth street. Brick, 2 stories, 10x12 feet, tin roof.

Store and Dwelling, 1156 South Eleventh street, \$600. John D. Filippi (O), on premises. Nicola Bartolomeo (C), 1241 Christian st. Brick, 2 stories, 12x28 feet, slag roof.

Factory Building, Twenty-first and Ludlow streets, \$20,000. J. J. & Jos. A. Short (O), 221 North Twenty-first street. Smith Hadden Co. (C), 1606 Cherry street. Fire damage repairs.

Warehouse, 2324-26 Susquehanna avenue, \$1,400. J. B. Gillies (O). Broad and Susquehanna avenue. Geo. Kensington (C), 2435 N. Hope street. New roof, door and window frames, fire repairs.

Garage, 3021 Aramingo avenue, \$1,600. Albert Haas (O), 3028 Memphis street. F. A. Funk (C), 2071 E. Clearfield street. Steam heating plant.

Church, Manayunk and Kraus avenue, \$5,000. The Moyer Memorial Baptist Church (O and C), on premises. Stone, second story addition, 50x70 feet, asbestos shingle roofing.

Storage Shed, 403 Richmond street, \$590. Harry L. Weaver (O and C), 1300 Beach st. Brick, 1 story, 45x20 feet, slag roof.

Lodge Rooms and Hall, 1748 North Broad street, \$1,000. Mastbaum Bros. & Fleischer (O), 1424 South Penn Square. L. A. Fowler (C), 1717 Arlington street. Alterations.

Dwelling, 1932 North Seventeenth street, \$800. Wm. Cookshott (O and C), on premises. Alterations.

Store and Dwelling, 706 Dickinson street, \$275. Wm. Mogilevsky (O), 725 Dickinson street. B. Shestack & Co. (C), 528 Reed st. New flush bulk and alterations.

Department Store, 809 Market street, \$1,000. Strawbridge & Clothier (O), Eighth and Market streets. Stacey Reeves & Sons (C), 2011 Market street. Alterations.

Store, 6137-39 Woodland avenue, \$500. J. W. Camac (O), 6211 Woodland avenue. Wm. J. Erwin (C), 5927 Kingessing avenue. Stone foundation only.

Factory, 215-17 North Third street, \$700. Henry Middenhoff (O), on premises. Thos. Dallas (C), 422 Diamond street. Boiler foundations, sotsne and brick.

Dwelling, 404 North Rittenhouse street, \$500. K. Dienstman (O), on premises. F. K. Stahl (C), 2713 North Park avenue. Brick, 1 story, 10x16 feet.

Store, 29 South Eleventh street, \$2,500. Riegel Est, care of Fell & Spalding (O), North American Building. Raith Const. Co., Inc. (C), 302 North Master street. Alterations.

Store and Dwelling, Marshall and Spring Garden streets, \$1,000. Chas. Smith (O), on premises. Max Kane (C), 871 North Sixth street. Fire damage.

Stable, 326-28 E. Allen street, \$1,500. A. L. Thomas (O), 324 E. Allen street. B. R. Groves (C), Merchantville, N. J. Fire repairs.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT. Supervising Architect's Office, Washington, D. C., Sept. 4, 1917.—Sealed proposals will be opened in this office at 3 P. M., Oct. 15, 1917, for the construction of the United States post office at Waynesboro, Va. Drawings and specifications may be obtained from the custodian of the site at Waynesboro, Va., or at this office, in the discretion of the Supervising Architect.—Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT. Supervising Architect's Office, Washington, D. C., September 15, 1917.—Sealed proposals will be opened at this office at 3 P. M., November 1, 1917, for the construction of the United States post office at Kenton, Ohio. Drawings and specifications may be obtained from the custodian of the site at Kenton, Ohio, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT. Supervising Architect's Office, Washington, D. C., September 15, 1917.—Sealed proposals will be opened at this office at 3 p. m., October 29, 1917, for the construction of the United States post office at Waterloo, N. Y. Drawings and specifications may be obtained, after September 22, 1917, from the custodian of the site at Waterloo, N. Y., or at this office, in the discretion of the Supervising Architects. Jas. A. Wetmore, Acting Supervising Architect.

As The Editor Sees It

WHAT is wrong with the operative builder? Real estate men report the demand for dwelling houses greater than anything they have known within the past ten years. Money is easy, wages are higher than at any previous time in our history as a nation, employment is plentiful. New industrial enterprises are springing into being upon all sides, bringing with them to Philadelphia thousands of new people who must make their homes here. In the Chester district alone the new enterprises completed and under way involve a total expenditure of millions of dollars. While industries unrelated to the supply of war material have undoubtedly felt to some extent the pinch of depression the general average of prosperity is without parallel.

If the builders are holding back on contemplated operations with any hope that material prices will undergo a considerable drop, they are foredoomed to disappointment. The keenest judges in the United States upon market conditions are a unit in agreeing that not only will prices not recede during the period of the war, but that prices will not decline perceptibly for a number of years following the war. Men who take this view base their opinions upon the fact that to America, in a commanding degree, will fall the task of rebuilding the war-ravaged communities of France and Belgium. American labor, American materials, American resources generally, are to be heavily drawn upon in the

years following the close of hostilities. The result will be to create a demand that will stiffen, rather than let down price levels in the structural lines.

* * *

THE few local builders who have had the courage to go ahead with operations in spite of the general chorus of gloomy prophecy report the demand brisk with sales easier than they have been in years. Even the labor question, these men report, is actually less vexatious than was anticipated. Selling prices are perforce much higher than has been the case in former years, owing to the advance in cost of labor and material, but the advanced selling prices appear not to have interfered with sales. Home buyers have been quick to recognize the fact that it costs more money to build to-day than it did two years back. As a result they bargain fully prepared to pay anywhere from 25 to 50 per cent. more for a given type of operative dwelling than they could have been prevailed upon to pay in 1914.

How easy sales are is instanced in a real estate deal that was put through recently in lower West Philadelphia. A coterie of clever speculators took over from a builder an operation in a side street containing some 60 two-story houses. These houses, built five years back, had been rented to advantage but failed utterly to sell, presumably, at was inferred, because the price asked, \$2,800, for small street houses, was excessive as values went in that particular locality.

The houses wanted painting badly and stood in need of minor interior repairs. Well, the speculators bought in the entire block, made necessary repairs, painted the exteriors attractively, opened a sample house for inspection and got busy. Now, understand, all of this happened in the present year. The first sample house was opened for inspection in May. That house sold within two weeks. The next sample house, sold in three days. The entire operation was sold off by the 10th of the present month at \$3,000 per house, the corners bringing \$3,200.

* * *

IF this deal doesn't prove that there is a ready demand for operative dwellings, what does it prove? Here was a batch of houses that resisted all efforts to move them five years ago when they were first built. The builder found it impossible to get buyers at \$2,800. In the third year of the war a group of speculators take them over and dispose of the entire lot, without advertising, other than a sample house open for inspection, in less than five months.

It looks a lot to me as if some of the operative building element are passing up a pretty big opportunity by adhering to their present attitude of waiting for materials to take a drop in price. Materials are not going to drop and meanwhile a decidedly healthy demand is asserting itself for moderate priced homes. That the lull in building has helped to stimulate, if not to create this demand,

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086 KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

there is no doubt. But it has been helped also and rather materially by the thousands of new people attracted here by the big munitions enterprises. The wise operator will not be slow to perceive the wisdom of breaking ground while this demand lasts.

* * *

AN inquiry that will interest manufacturers generally is promised in the state-wide investigation of New York fire insurance rates planned by Superintendent of Insurance Jesse S. Phillips, who in a recent circular states that the average loss ratio in New York City has been \$8,000,000 as against \$25,000,000 premiums collected per year.

The Board of Estimate and Apportionment of New York City recently adopted a resolution requesting the Superintendent of Insurance to make an investigation of the fire insurance rates charged to property owners in New York City. The resolution contains a statement that the city has spent approximately \$150,000,000 for additional water supply; that it has expended large sums in the development of a high pressure water service; that it has enforced legislation for the reduction of fire hazards; that the fire department has been motorized at an enormous cost.

In compliance with the request from the Board of Estimate and Apportionment of New York City, Superintendent of Insurance Phillips proposes to make a thorough investigation, not only of the rate situation in New York City, but of the entire State. As a preliminary to this investigation he has sent a circular letter to each of the stock fire insurance companies authorized to transact the fire insurance business in New York State, requesting the companies to furnish their experience for a period of ten years, such experience to include the fire premiums collected and losses paid in each State of the Union and in New York City separately.

* * *

THE companies are also required to furnish a statement showing actual expenses incurred in transacting the fire insurance business in each of the States and territories of the United States and separately for New York City. Similar information is required regarding rates of commissions paid. The companies are also required to state in detail their activities in the matter of increasing or reducing rates on any class of risks since January 1, 1915.

It is expected that the information thus collected will materially assist in determining whether or not the rates charged in New York City, or in the State as a whole, have been consistently productive of larger profits than could reasonably be expected. When the information obtained during the course of

the investigation is such as to form a fair basis for conclusions, public hearings will be held in order to afford all interests an opportunity to present their views. For the purpose of making the investigation an exhaustive one, helpful suggestions, comments and individual views are invited by the insurance department.

The agitation on the part of manufacturers for more equitable rates has extended over many years. It is safe to assume that their position will be abundantly justified in the facts that will be brought out.

* * *

NEW anti-business phrases are being coined daily. The new crop of muckrakers have been bandying such epithets as 'profiteers,' 'war-hogs,' 'plutocracy's war' and so forth until many regard patriotic industrial leaders more or less in the light of selfish and cold-blooded war promoters," says *American Industries*. "How destructive these sensation-mongers are any well-informed person can understand.

A true measure of American business men these days makes it difficult, if not impossible, to find more broad-minded, patriotic and self-sacrificing individuals. We utter no word against the Government for its efforts to reduce prices of some essential commodities; in the interest of constructive industrial development, however, we do insist that price reduction by means of Governmental fiat is something not to be desired if any alternative which promises the same result can be discovered and utilized."

* * *

THERE are few, if any, political or economic Solomons available who can hope to fix an arbitrary price for commodities the production cost for which is enhanced to the nth degree by higher labor cost, famine or shortage of raw materials or machinery.

"Until Government officials accomplish something tangible in the much-desired direction of stimulating output, the wisdom of the price fixing policy will remain open to question. Incidentally, narrow gauge, unbusinesslike methods can never be calculated to produce maximum results in war or peace time; they who stretch an elastic rubber band must watch out for the sting of the backsnap."

* * *

THE *New York Sun* referred to the Palais de Justice at Brussels not long since as "one of the costliest and ugliest structures on the face of the earth." Whereat B. B. Valentine, a New York architect, was moved to protest. Mr. Valentine's letter is so interesting from the architectural point of view that I am giving it space here for

the delectation of THE GUIDE's readers. Writes Mr. Valentine:

"In a leading editorial article, 'The Court and the Sentence,' you say: 'There is in the city of Brussels a court building which is generally regarded as one of the costliest and ugliest structures on the face of the earth.'

"As one who has visited repeatedly this majestic Palais de Justice and admired its magnificent proportions and its ornate interior, it is surprising to me that *The Sun* should characterize it as ugly, as great authorities on architecture pronounce it a masterpiece. R. Phene Spiers, author of several architectural works, former president of the Architectural Association of England and master of the Architectural School of the London Royal Academy, says:

"No modern building on the European continent is more remarkable than the Brussels Law Courts, from the designs of J. Poelaert, an original genius in architecture, who had the good fortune to be appreciated and given a free hand by his Government.

"The design is based on classic architecture, but with a treatment so completely individual as to remove it almost entirely from the category of imitative or revival architecture; somewhat fantastic it may be, but as an original architectural creation it stands almost alone among public buildings."

"The cost was 60,000,000 francs (\$12,000,000), which, considering its size, 590 feet by 560 feet, and its wonderful commanding site on the brow of a hill at the southern extremity of the Rue de la Regence, is not large.

"It was inaugurated in 1883, the fiftieth anniversary of Belgian independence. The arch criminal of the ages should neither be tried nor sentenced in the Brussels Palais de Justice. A drum-head court-martial for him and he should be shot before daylight by the glimmer of lanterns, just as the unfortunate Duc d'Enghien met a cruel and unjust death at the hands of Napoleon in 1804."

* * *

THE reference in the concluding paragraph is to the Kaiser, the *Sun* making the suggestion that he be tried and sentenced in the Palais de Justice.

If you've got a specialty that will commend itself to builders, make a contract for space and start right in and talk about that specialty. Dwell on its good points, point out its advantages over similar devices, set forth its dominant qualities. And keep right on, week after week talking about it. If you don't book orders we'll bet you a big red pipkin that there is either something better on the market or your specialty isn't worth a kopeck noway.

EDITORIAL NOTES

J. V. Dailey has resigned his position as special representative of the Michigan Stone Co., Detroit, and has accepted a similar position with the Chicago Branch of the Richardson & Boynton Co., New York.

* * *

The limited amount of activity noticeable in the structural steel market during the past week was almost wholly confined to orders for Governmental construction work and the small amount of industrial building that continues to progress. Although the basic price of fabricated material is slightly lower than that maintaining a few weeks ago, the fact has not been responsible for any perceptible stimulation to general building activity, and there is little likelihood of a marked improvement in the building situation throughout the country until structural steel prices are further reduced. The steel situation has for some time been the dominating factor in the recession of building construction and until steel prices are returned to a figure that is other than prohibitive, no great building movement can be expected.

* * *

Mr. William H. Besarick, architect, who was formerly located at 15 School street, Boston, Mass., has now located his office at 64 Sagamore street, Dorchester, Mass.

* * *

During the week just past it was learned that the Central Railroad of New Jersey and the Erie Railroad have both decided to withhold all of their contemplated construction until the prices of structural materials and supplies are reduced to a figure that would permit of construction on a more reasonable and just basis. Both of these roads have a considerable amount of work in prospect, and their action is important. The decision eliminates building work of every character, except that entailed in the maintenance of right of way, and other work essential to safety and efficient railroad operation. As the amounts annually expended by the railroads of this country for construction work of various types reaches a high total, the decision of these important influences will undoubtedly have a marked effect upon material manufacturers, and will probably hasten concessions in price.

* * *

O'Donnell & Wolfe announce the opening of a branch office for the general practice of architecture in the County Bank Building, Elyria, Ohio. The main office of the firm is at Sandusky, Ohio. Mr. O'Donnell, who will be in charge of the new office, desires a complete line of trade samples and catalogues sent to him there.

* * *

Continued high prices of building materials and supplies seem to be the dominating influence in the present unsatisfactory building

situation. While commodity prices hold to their present altitudes, there is but slight probability of a marked increase in construction work. The existing condition is responsible for the fact that a number of large and important industrial projects are being held in abeyance until prices are considerably lowered. The major portion of this work is for buildings for which there is an imperative demand, but owing to the high construction costs, owners hesitate to commence operations. Nevertheless, there is a grain of hope for the building fraternity in the fact that there are indications from some quarters that recessions in price are imminent, and, with the industry in general taking an attitude that no additional activity is possible at the current excessive prices, material manufacturers and dealers are very likely to co-operate for the improvement of the situation by making every possible reduction compatible with the business policies of their respective industries. By so doing they will protect their own interests.

The National Association of Purchasing Agents will hold its annual congress in Pittsburgh, Pa., on October 9-10. The details are being worked out by Robert F. Blair, Pittsburgh Gage and Supply Company, chairman of the convention committee. E. L. McGrew, of the Standard Underground Cable Company, is National Association president.

* * *

Among the subjects to be discussed by the National Tax Association at its November conference in Atlanta will be a "model" system of taxation, in the hope that the various States may have common ground to work upon in matters concerning tax reform. The perfection of such a system would carry out a much needed co-operation toward uniformity in taxation and an abandonment of conflict due to overlapping jurisdiction.

The New York office of the Baltimore Copper Smelting and Rolling Co. is now located in its new building at 128 Fourth avenue. It carries in stock ingot copper, pig tin, lead, spelter, sheet copper, copper rolls, flats and anodes.

* * *

The National Hardware Association and the American Hardware Manufacturers' Association will hold their next joint convention at Atlantic City, N. J., October 17-19, with headquarters for both associations at the Marlborough-Blenheim.

* * *

Loans and advances to the Entente Allies by the United States have reached the total of \$2,266,400,000. Of this sum Great Britain has received the largest share, amounting to \$1,105,000,000; France, \$630,000,000; Russia,

\$275,000,000; Italy, \$200,000,000; Belgium, \$53,400,000, and Servia, \$3,000,000.

* * *

The National Housing Association will hold its annual meeting at Chicago October 15-17, 1917. Headquarters, Hotel LaSalle. For information inquire of Lawrence Veiller, secretary, 105 East Twenty-second street, New York City.

* * *

The Public Service Commission is readvertising for bids for the construction of station finish for Sections 1 and 2 of the Gravesend avenue or Culver Rapid Transit line in Brooklyn, and will open bids on October 26, at 11.30 A. M. Bids were recently received upon this contract, at which time the Mortenson Wood Working Company, Inc., of Brooklyn, was the low bidder at \$666,188.50. An award was made of the contract to that company, but investigation subsequently showed that the company would experience difficulty in carrying out the contract. Thereupon, at a recent meeting of the Commission the award was rescinded and the decision reached to call for new bids, as above stated, at the new date named. Provision will be made in the new contract that the contract must be speeded to completion so that the delay caused by readvertising will not delay the completion of the line.

Stanton Freeman has resigned his position as general manager of the Carbon Iron and Steel Company, of Parryville, Pa., and has become secretary and treasurer of the Port Henry Iron Ore Company, with offices at 2 Rector street, New York City.

* * *

The danger of a shortage in the supply of tin plate has not yet been passed, according to a recent announcement by the Department of Commerce. This bulletin urged packers to use paper and fibre containers wherever possible. The estimated increase in the production of tin plate this year over last is 25 per cent. The output of tin plate for the first half of the year, according to figures compiled by the Department of Commerce, was 16,038,732 base boxes, against a total production of 26,979,994 last year. The statement says that the increasing demands for steel by the Government may necessitate a decrease in the allotments to the tin plate makers.

The American International Corporation has organized a new subsidiary, the American International Steel Corporation, to engage in the export of steel and steel products. The new company intends to develop a foreign selling organization, and will have the financial and shipping connections of the American International Corporation. Edward M. Hagar, for many years president of the Universal Portland Cement Co., the subsidiary of the United States Steel Corporation engaged in making cement from blast-furnace slag, is president. Morris Metcalf, identified in 1896 with the Illinois Steel Co. at the time of the early slag making experiments and for years assistant to Mr. Hagar, is vice-president, and J. W.

PHILADELPHIA HOUSE ARCHITECTURE

Hook, of the Allied Machinery Co., a subsidiary of the American International Corporation, is also a vice-president of the new company. Offices have been established in London and Buenos Aires and the general offices of the company are in the Equitable Building, 120 Broadway, New York.

E. B. Blandy, for the past seven years connected with Pilling & Crane, New York, has resigned to become secretary of the Northern Ore Co. of New York, which some months ago acquired the Keystone blast furnace, Island Park, near Easton, Pa.

The National Paint, Oil and Varnish Association will hold its convention at the Congress Hotel, Chicago, Ill., October 7-11. George V. Horgan, 100 William street, Manhattan, is secretary.

ADVERTISING IS NOT A WASTE.

The favorite plaint of the business man who has fallen asleep by the wayside is that advertising is a huge economic waste; that millions of dollars are spent and wasted in artificial attempts to stimulate selling, to the ultimate injury of both buyer and seller. At first glance, and to the man who has not really studied the subject, this argument may appear logical. The only trouble with the logic is that it does not square with the facts.

"Let us see how much the big advertisers spend," says Alan C. Reiley, president of the Association of National Advertisers, in discussing this matter. "The average man hears talk every day about the millions and millions spent for advertising and he finally gets the notion that somehow or other the buyer has got to pay for it.

"I wonder if Mr. Average Man ever stops to realize that those millions spent in advertising sell hundred of millions worth of goods—goods that could never be sold so cheaply in any other way. And it is this immense saving in selling cost that helps to make low-priced goods.

"What is the exact ratio of advertising to sales anyhow? This is something that every buyer would like to know.

"The advertising of one of the leading paint manufacturers of the country averages 3½ per cent. of their total sales. In other words, for every dollar's worth of paint they sell, they spent 3½ cents in advertising. This is about equivalent to the price of a postage stamp and a cent's worth of paper for every dollar's worth of goods sold. Another big paint and varnish manufacturer spends from 3¼ to 4¼ per cent.

"Next take clothing. We have obtained figures concerning two of the biggest clothing manufacturers in the country. One spends 1½ per cent.; the other 2 per cent. An equally prominent shoe manufacturer spends 1½ per cent."

This is the age in which one man DOES ONE THING. You can run your BUSINESS. Find a man who can RUN YOUR ADVERTISING.

Philadelphia stands pre-eminent in American house architecture. In fact, we may begin to ask the question whether Philadelphia architecture is not the most vital art development in this country to-day. While discerning spirits have searched feverishly in music, in painting, and in other arts, minutely examining the work of each new individual in the hope of discovering some evidences of a rising native school, in the Pennsylvania city a group of architects, working sincerely and without ostentation, have come far along the road towards the cherished goal.

The more one studies the Philadelphia school the more attributes does one find in it of an enduring success. Principally, it suffers less than any other from that overwrought individualism which is the burden of modern art. In Philadelphia, our strongest impression is somehow that the work of the community as a whole is greater than that of any individual; whereas in New York, with all the excellent work accomplished there, we do not have this feeling with anything like the same distinctness—there architecture appears as the unrelated work of individuals, many of them men of exceptional ability. Nor is this difference between the two cities due to lack of men of strong individuality in Philadelphia; for, as we all know, the latter city has furnished her full quota among the brilliant leaders of the profession.

To test the truth of her architectural excellence one need only motor through the suburbs of Philadelphia. There one will be astonished at the rare unity of architectural effect of nearly all the houses, small as well as large, grounds as well as houses; and one will note that they harmonize remarkably, appearing as parts of a whole community, similar to those communities we are wont to admire in England. The small houses compare well with the large ones, and the works of less known architects stand up well beside their more prominent fellows. Suburbs elsewhere in this country are, the best of them, a jumble of houses of all styles and degrees of excellence. Nor is there anything imitative about all this. Philadelphia suburbs have the open aspect of neighborliness, the expansive porches and large sun-welcoming windows, the cheerful touches of white painted wood that indicate the American temperament—all in contrast to the walled privacy, the more sombre colors and the toy-like scale which are essentially Britannic. It is true that there is some English influence in Philadelphia architecture. This is not strange when one considers that Philadelphia has remained Anglo-Saxon and that many of her architects have English leanings. Mr. Frank Miles Day received some of his early training in London offices, and Mr. Eyre's sympathy with English work, especially in interiors, is well known. These overseas influences do not, however, in the least weaken the American character of Ardmore, of Rosemont, of Haverford, for they

follow, either literally or in spirit, early American architecture, Georgian or Colonial, of which splendid models are found in the Philadelphia countryside, and which has come down to them in an almost unbroken tradition to the present day.

To discover the secret of the Philadelphia school we should know more of Philadelphia itself. If its architecture is superior to that of other American cities, it is because Philadelphia civilization is in some respects superior and is certainly more clearly defined than the civilization of other cities. An old community, it is in a district of great industrial resources and rich farm lands, where the ideal of fine homes and comfortable living has been cherished for generations without interruption. New England, with her harsh climate and barren soil, with her Puritan ancestry, turned more to intellectual and literary traditions; while Philadelphia, to whom nature has appeared in a softer mood, has preferred the cultivation of urbanity, of manners, of the art of living in its more material phases. The Quaker City instinctively perceived the fallacy of "plain living and high thinking." In this cult of the home in Philadelphia nothing has been neglected. Nowhere is good cooking so well appreciated as there. Even the strict Quakers of two generations ago could not resist the delights of dining and those of their more worldly neighbors still living will tell you with amusement that people liked to visit the homes of the Friends, since the best tables in Philadelphia were to be found in them.

One might multiply these incidents indefinitely. They point to an existence of a community art—that is, an instinctive appreciation of an art product and a demand for such, on the part of those termed "clients," who in the course of several generations have succeeded in arriving at such unanimity of art opinion that it stamps itself more or less strongly on the work of individual artists. As a proof of the strength of her tradition, Philadelphia was never engulfed in Victorianism as were nearly all other English-speaking communities. While elsewhere brownstone horrors were built, Philadelphia still clung to the simplest, post-"Colonial" type of house, and even in the seventies lined her streets with those severely plain three-story, flat-roofed brick houses of small panes, of white marble lintels and sills, and white marble steps that housewives caused to be scrubbed so industriously. Monotonous and uninspiring they were, but they were in good taste and scale and they served to keep the chain of heritage from breaking.

It is as if Philadelphia, while the rest of the world stumbled in the mud of nineteenth century confusion, had at least the grit to stock to her own. If she was somewhat bewildered and had lost her impulse, at least she would not rot away.

The contemporary twentieth century work

is far superior to its mid-Victorian predecessors in the esthetic virtues, yet it retains the same honest directness which at times points to that inevitableness that is the eternal in art. Though firm in tradition, it carries no burden of formulae nor of bookishness. Free and supple in expressing conditions, it allows plenty of play to the individual and to the vivacity of modern Americanism. This is a fourth excellence to be added to the other three, of community expression, strong tradition and honesty.

Perhaps these conditions explain an odd fact, which is, that Philadelphia architects may occasionally make mistakes of scale or proportion without somehow much impairing their work. What they do is apt to have a character and rightness that is innate and which is too superior to be harmed by a few errors. A striking proof of this is to be found "somewhere in New Jersey," where in a small town two buildings similar in size and purpose stand near together on the same street. One is the work of a well-known New York firm; the other of Philadelphia architects. The New Yorker's building is faultless, in fine scale, exquisitely drawn and detailed. The Philadelphian's building is not so "knowing" in its details; on a drawing it looks commonplace, even slightly clumsy, and the interior has three slightly different scales in the large entrance hall and main stairs. Yet, seen in place, the honors all go to the latter. It is splendid in character, in surety of design, in color, and in that unconscious good breeding that affords more than anything else supreme good style. The New York work is fine architecture; the Philadelphia one is fine art.—John Taylor Boyd, Jr., in "Architectural Record."

A BLOW AT AMERICAN MAIL ORDER HOUSES.

The Government of the Republic of Panama has recently passed a law providing, among other things, that foreign companies doing business in Panama shall have a resident agent or representative in the country. The same companies must also invest \$100,000 dollars (about £20,500) in real estate in Panama or deposit this sum in the National Treasury or in an approved bank. Apparently this measure is aimed at the mail order houses, so common in America, who do an enormous business with the South American republics without contributing anything to their national revenues.—"Commercial Review" (London).

AMERICA TO REBUILD.

Before American competition with Germany is in full swing, and before Danzig can be got ready to act as a base for American, French, and English trade in the Near East, Poland will be building herself up out of the ruins. Here again America, side by side with England and France, will come to the rescue, for gigantic amounts of money and work will be needed for the task and the country, without outside assistance, would be helpless. American builders, experienced in undertak-

ings on a large scale, will be welcomed in this field by the Poles. Besides bridges, roads, railways, factories, and farms, thousands of villages and towns will have to be planned and built quickly to provide shelter for the wretches now living in miserable barracks, in dugouts, or out in the forests, and also for the hundreds of thousands of Polish refugees who will return from Russia as soon as the inferno of battles round their former homes will have ceased raging.—"Chicago Tribune."

UTILIZING OLD VARNISH.

Varnish of good quality that has become thick or gummy by exposure may be treated so that it is again workable and useful, according to the "Painters' Magazine." The success of the treatment, however, depends altogether upon the degree of saponification. When the varnish has lost its volatile thinner and has become stringy and ropy, there is no process that will bring it back to life, without which it is not safe to use. Linseed oil, at any rate, no matter how highly heated, will not redissolve the resinified oil and gum. If not too far gone, turpentine or benzine will take some action on the residue by heat, but it will hardly pay for the risk and trouble. When the varnish has simply thickened to a certain extent, it can be made workable by placing the container in a hot water bath and heat up some turpentine or benzine in the same manner and to a like temperature, then mix by thorough stirring.

METAL CEMENT.

Plumbers, steam fitters and householders have found extremely useful the metal cement now on the market that is said to have wide application in stopping leaks. The composition may be applied like putty. It readily with stands high pressure, is not affected by vibration and expands and contracts under different temperatures the same as metal. The manufacturers of this cement claim that it is easy to apply in the following manner: Clean and dry thoroughly and slightly warm the parts to be repaired, removing all oil and water, grease, rust, or dirt; mix powder and liquid into putty; plug leak carefully with the mixture and allow thirty minutes to harden thoroughly.

Learn to advertise. If you feel unequal to the task of preparing the kind of copy you ought to have, let us prepare it for you. Advertising is our business. We are always glad to help men who are honest enough to concede that they do not know it all. And the service won't cost you a penny if you contemplate joining the army of "Guide" advertisers.

The business man who grudges a commission to an advertising agent who thinks "he can do it himself" is usually about as intelligent as he would be if he grudged the commission of the architect and decided to build his store for himself.

STEEL BRIDGE STANDARDS.

Not so many years ago the strength of the bridges on country roads was of relatively little importance. Traffic was light and individual heavy loads rare. The design of steel bridges received scant attention from road officials and the erection of the structures even less.

The pleasure car and the motor truck have changed conditions. At present the utility of a road depends in a large measure upon the strength of its bridges. The old haphazard methods of providing bridge structures are fast being superseded by better ones. Ready-made, "tin" bridges are less commonly sold by bridge companies, and the designing of highway bridges is more and more being done by competent engineers working in the interest of the purchaser and not the seller. As a result, adequate structures are replacing the unsightly, weak bridges once so common throughout the rural districts.

One factor that has entered largely into the improved conditions of recent years is the work that has been done by central highway authorities in aiding the smaller units in their bridge work.

Comparatively little of the total road mileage is made up of bridges, but from the standpoint of the utility of the highways the bridges are of very great importance. Good roads necessarily include good bridges.—"Good Roads" (New York).

PENALIZING WOOD SHINGLE ROOFS.

Communities in the South that continue to tolerate the free use of wood shingles as roof coverings and the fire menace it entails, in future must pay for the privilege, the insurance companies having flatly refused at many points to assume the hazard of such risks without receiving additional premium.

At Birmingham, Ala., following the repeal of the safety anti-wood shingle roof act, rates upon all structures using them were advanced a flat fifteen per cent. This action by the underwriters caused consternation in the lumber camp, but its reasonableness cannot be questioned.

By order of the Texas Rate Making Board, all properties covered with wood shingles must pay a penalty of twenty-five cents instead of fifteen cents as heretofore.

Although located in the heart of the hard-wood district, Asheville, N. C., a short time ago adopted an ordinance barring the future use of wood shingle roofs; repairs upon existing structures are permitted only to the extent of twenty per cent. Further, it is required that present wooden roofs be replaced with those of an incombustible character within nine years.

Baton Rouge, La., too, has fallen into line in legislating against this form of fire danger, and its example in all probability will be speedily followed by that of other communities in the State. The inexorable logic of events has decreed that—The Wood Shingle Must Go!—"Construction" (New York).

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Shop and Garage, Twenty-sixth and Oregon avenue, Philadelphia, \$23,000. Architect, private plans. Owners, Atlantic Refining Co., 3144 Passyunk avenue, Philadelphia. Brick, 1 story, 49x226 feet, slag roof, steam heating, electric lighting, hollow metal skylights, cement floors. Owners will build.

Residences (200), Thirteenth and Butler streets, Philadelphia. Architect, private plans. Owner, Mark Haller, 2610 South Second street, Philadelphia. Brick and stone, 2 stories, 20x40 feet, slag roof, hot water heating, electric and gas lighting. Plans in progress. Owner will be ready for sub-bids in two weeks.

Buildings (3), Frankford Arsenal, Philadelphia. Architect, private plans. Owners, U. S. Govt., care of Col. Geo. Montgomery, Frankford Arsenal, Philadelphia. Reinforced concrete, stone and brick; artillery ammunition assembling shop office, 1 story, 70x29 feet; small arms ammunition storehouse, 2½ stories, 123x87 feet; primer and artillery planing and riveting shop, 3 stories, 122x52 feet and 38x25 feet, slate and slag roofs, composition, maple and cement floors, hollow tile, metal lath, rolled steel sash, hollow metal skylights, fire and kalamein doors, fire escapes, roof ventilators, metal window guards, waterproofing, ornamental iron work, wire work. Owners have received bids.

Church and Sunday School, Fifty-ninth and Pine streets, Philadelphia. Architect, George E. Savage, Witherspoon Building, Philadelphia. Owners, New Berean Baptist Church, care of Rev. Geo. Lockett, 36 Chestnut Terrace, Philadelphia. Stone, 1 story and basement, 100x92 feet, slate roof. New plans in progress.

Boiler Room (add.), West Philadelphia Shops, \$7,000. Architects, M. of W. Dept., Room 361, Broad Street Station, Philadelphia. Owners, Penna. R.R. Co., Broad Street Station, Philadelphia. Brick, 1 story, 23x51 feet, boiler foundations, built up roof, brick floors. Plans completed. Owners, care of A. B. Clark, Superintendent, Philadelphia Terminal Division, Thirty-second and Powelton avenue, will take bids.

Garage, 1524 Loudon street, Logan, Philadelphia. Architect, William H. Wooters, 816 West Allegheny avenue, Philadelphia. Owner, Simon J. Klein, on premises. Brick, 1 story, 20x40 feet, slag roof, hot water heating, electric lighting, cement floors. Owner taking bids, due in one week. Harry P. Werner, 3419 Old York road, and Frank K. Stahl, 2713 Park avenue; Thos. C. Trafford, 1613 Sansom street, are figuring.

Storage Building (alt.), 429 Spruce street, \$3,000. Architects, Schermerhorn & Phillips, 430 Walnut street, Philadelphia. Owners, M. Feitelson & Son, on premises. Brick, 3 stories, consists of general interior alterations, carpenter and millwork, plumbing, electric

lighting, pine floors, plastering, office partitions, metal ceilings. Architect taking bids, due September 26th. H. Seidman, 1312 N. Sixth street; J. Bender, 1817 South Fourth street; P. A. Sorensen, 422 North Twelfth street; J. Gorchov, 4116 Girard avenue; H. P. Schneider, 3713 Old York road, are figuring.

Garage, 224 Arch street, Philadelphia. Architects, Custer & Gill, 304 Market street, Camden, N. J. Owner, Chas. McNamee, care of architects. Brick, 1 story, 51x130 feet and 51x88 feet, slag roof, cement floors, steam heating, electric lighting, hollow metal sash and skylights, roof ventilators, wire work. Architects taking bids, due September 29th. Thos. C. Trafford, 1613 Sansom street; H. E. Sweger, 4435 North Uber street; Philip Hainbach Cont. Co., Twenty-sixth and Thompson streets; Conneen Const. Co., 1737 Filbert st.; Freund Const. Co., Bulletin Building, and Evans Const. Co., 9 South Eighteenth street, are figuring.

Motion Picture Theatre, Queen lane and Schuyler street. Architect, Henry L. Reinhold, Jr., 1309 Walnut street, Philadelphia. Owners, Queen Lane Theatre Co., care of architect. Brick, 1 story and balcony, 28x140 feet, slag roof, tile, asbestos and composition floors, steam heating, electric lighting, tile, marble and terrazzo work. Architect taking bids, due as soon as possible. Standard Const. Co., 1713 Sansom street; Alexander Chambley, Twenty-first and Summer streets; John V. Speth & Co., 1714 Sansom street, Philadelphia, and Butz & Clader, Allentown, Pa., are figuring.

Residence and Garage (alt. and add.), 1103 Sixty-ninth avenue, Oak Lane. Architect, C. E. Schermerhorn, 430 Walnut street, Philadelphia. Owner, John D. Williamson, Jr., on premises. Brick and stone, 1 story addition, 18x18 feet; garage, 1 story, 12x18 feet, slate and tin roof, canvas, concrete and pine floors, hot water heating, electric lighting, tile, marble and terrazzo work. Architect taking separate bids on plumbing, hot water heating and tile work. Architect has received bids. and tile work. Architect has received general bids.

Quarters for Radio Operators, Navy Yard, Philadelphia. Architect, private plans. Owners, U. S. Government, F. R. Harris, Chief Navy Department, Bureau of Yards and Docks, Washington, D. C. Brick, 2 stories, 55x27 feet, asbestos shingle roof and tin roof, hot water heating, electric lighting. Owners taking bids, due October 1st. Hogg Const. Co., 1634 Sansom street; W. W. Anstine & Co., 1218 Filbert street; Metzger & Fisher, Otis Building, and Conneen Const. Co., 1737 Filbert street, are figuring.

Residences (3), Phil Ellena street and Lincoln Drive, \$24,000. Architect, private plans. Owner, James A. Mitchell, Forty-sixth and Market streets, Philadelphia. Stone and brick,

3 stories, 37x28 feet, slate roof, hot water heating, electric lighting, hardwood floors. Work about to be started.

Garage and Sales Building, 3017-23 North Broad street, Philadelphia. Architect, private plans. Owner, C. I. Stein, Liberty Building, Philadelphia. Brick and reinforced concrete, 2 stories, 80x100 feet, slag roof, steam heating, electric lighting, concrete floors, hollow tile, elevators, hollow metal sash, fire and kalamein doors, iron stairs, dampproofing. Conneen Const. Co., 1737 Filbert street, taking sub-bids, due as soon as possible.

Buildings (6), Navy Yard, League Island, Philadelphia. Architect, private plans. Owners, U. S. Government, care of F. R. Harris, Chief, Navy Department, Bureau of Wharves and Docks, Washington, D. C. Reinforced concrete and brick, galvanizing plant, 1 story, 61x122 feet; oxyacetylene generating plant, 1 story, 64x64 feet; engine house, 1 story, 69x1400 feet; locker house, No. 1, 2 stories, 57x109 feet, and locker house, No. 2, 1 story, 57x79 feet; two ramp toilets, 1 story, 15x67 feet, ready and slag roof, cement floors, steam heating, electric lighting, rolled steel sash, fire doors, ornamental iron work, metal lath, safety treads, roof ventilators, wire work (plumbing reserved). Owners taking bids, due October 8th. Metzger & Fisher, Otis Building; Warren-Moore & Co., Colonial Trust Building, and F. W. Mark Const. Co., Finance Building, are figuring.

Residence (alt. and add.), Gowen avenue and Ardleigh street, Mt. Airy. Architect, Geo. S. Idell, 34 South Sixteenth street, Philadelphia. Owner, Frank P. Brooke, 7420 Boyer street, Philadelphia. Stone, 2½ stories, two-story frame porch addition, slag roof, hardwood floors, tile work (plumbing, vacuum heating, electric work and composition floors reserved). Revised plans about completed. Will be ready for bids in a few days.

Garages (35), Whitby avenue and Fifty-third street, Philadelphia, \$6,000. Architect, private plans. Owner, John F. Holland, 309 South Fifty-first street, Philadelphia. Brick, 1 story, 130x34 feet and 117x17 feet, slag roof, cement floors, hot air heating, electric lighting, gasoline storage system. Owner taking sub-bids.

ABSOLUTELY NECESSARY.

We may live without poetry, music and art;
We may live without conscience and live without heart;
We may live without friends, we may live without fads;
But business to-day cannot live without ads.

The "Builders' Guide" is the OLDEST, and the ONLY Architectural Publication in Pennsylvania.

SOME MORE ADVERTISING

"DONT'S."

Don't try to do a million dollar business on a two thousand dollar basis.

Don't try to advertise a quarter page proposition in a three-inch space.

Don't belittle a big business reputation by running a piking little "ad" among piker competitors.

Don't overlook the fact that as a man is judged by his stationery, so a firm is judged by its advertising.

Small ideas, small methods, small men are becoming antiquated. This is the day of the broad outlook and big doings.

Wire for Electricity

Some people think that wiring a house or place of business for Electric Light means damage to decorations and fixtures—the ripping out of walls and ceilings.

The fact is, nowadays electric wiring is accomplished well and quickly without noise or dirt, at a minimum of expense and inconvenience. We will obtain wiring estimates for you without charge or obligation to use our service.

It's the Long Fire Travel in the Burnham Cosy Comfort Boiler That Makes the Short Coal Bill

IF you can keep the hot gases and smoke travelling back and forth inside a boiler long enough to extract the bulk of their heat, and still not make the draft sluggish; it's plain enough that less heat will go up chimney and more heat go into your radiators.

That back and forth action is what we call fire travel. It's this long fire travel in the BURNHAM Cosy Comfort Boilers that has a lot to do with making their short coal bills.

Our Engineering Department is at your service in solving Heating Problems

KEYSTONE SUPPLY & MFG. COMPANY

Plumbing and Heating Supplies

913-42 N. 9th St., Philadelphia

Factory, Bayard and Ridgely streets, Baltimore. Consulting engineer, P. O. Keilholtz, Continental Building, Baltimore. Owners, Porcelain Enamel Co., H. Turk, president, Eighth and O'Donnell streets, Baltimore. Plans in progress. Too early for details.

Garage, 3427 Greenmount avenue, Baltimore. Architect, John K. Stack, 12 E. Lexington street, Baltimore. Owner, Joseph C. Smith, 2330 McElderry street, Baltimore. Brick, 1 story, electric lighting, cement floors. Plans in progress.

Post Office (alts.), Fayette and Calvert sts., Baltimore. Architect, private plans. Owners, U. S. Government, Treasury Department, Washington, D. C. Consists of new partitions, steel and marble work, plastering, electric lighting, painting and plumbing. Owners taking bids, due October 1st. C. L. Stockhausen Co., Gay and Water streets; G. Walter Tovell, Eutaw and McCulloh streets; John Waters Building Co., 23 E. Centre street; Cowan Building Co., 106 W. Madison street; Fred Decker & Son, 1209 E. Biddle street; John Hughes & Son, 104 E. Saratoga street; B. F. Bennett Building Co., 123 S. Howard street; West Const. Co., American Building, all of Baltimore, Md., and the Theriault Const. Co., 916 Pennsylvania avenue, Washington, D. C., are figuring.

Building (alts.), Aliceanna and Spring sts., Baltimore, Md. Architect, private plans. Owners, E. J. Codd Co., 700 S. Caroline street, Baltimore. Consists of general interior and exterior alterations, metal work, slag roof. Owners taking bids. Consolidated Eng. Co., Calvert Building, Baltimore, is figuring.

Bungalow, Harmon, Md., \$2,500. Architect, Fred E. Beall, 306 St. Paul street, Baltimore, Md. Owners, American Gardens Co., 2 E. Lexington street, Baltimore. Frame, 1½ stories, 24x43 feet, shingle roof, hot air heating, electric lighting. Plans completed. Owner ready for bids.

Club House, Hollins and Parken streets, Baltimore, Md., \$15,000. Architect, J. F. Nelker, 330 N. Charles street, Baltimore. Owners, Lithuanian Association, John Chester, 663 W. Lombard street, Baltimore. Brick, 2 stories, 66x137 feet, slag roof, steam heating, electric lighting, plastering, painting, plumbing, iron work. Architect is taking bids. Adam Kratz, 118 South Carrollton avenue, Baltimore, is figuring.

Residence, Garrison and Piedmont avenues, Baltimore, Md. Architect, J. F. Nelker, 330 N. Charles street, Baltimore. Owner, Cheo. H. Textor, Professional Building, Baltimore. Stone, brick and frame, 1½ stories, slate roof, plastering, painting, tile work, electric work, hot water heating. Architect taking bids. E. G. Turner, 15 E. Fayette street, Baltimore, Md., is figuring.

Theatre, Hotel, Etc., Admiral, Md. Architect, Otto G. Simonson, Maryland Casualty Tower, Baltimore, Md. Owners, Camp Meade Amusement and Mercantile Co., Inc., Baltimore, Md. Plans in progress. Too early for details.

Burroughs, president, Court House, Upper Marlboro, Md. Brick, 2 stories, 113x33 feet, asphalt shingle roof, steam heating, electric lighting, maple and cement floors, rolled steel sash, metal ceilings. Contract awarded to Lambert Eckhardt, 1320 North Carlisle street, Philadelphia.

SPECIALIZED MEDIA FOR SPECIALIZED THINGS.

It must be evident to any thinking man that the place to advertise commodities or appliances special to any given industry is in the publications that reach that industry and that such advertising, if well written, well displayed and persistently kept up, will not only effect the desired sales, but will build up a permanent good-will asset of inestimable value. . . .—R. R. Shuman, in "Standard Advertising."

We know lots of men who have made money without the aid of advertising, but—they haven't made it since 1876.

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.,** Tasker Street Wharf, Delaware River, Philadelphia.

TIMELY TOPICS.

It Isn't Your Town—It's You.

If you want to live in the kind of town
Like the kind of a town you like,
You needn't slip your clothes in a grip
And start for a long, long hike.

You'll only find what you left behind,
For there's nothing that's really new;
It's a knock at yourself when you knock your
town.

It isn't your town—it's you.

Real towns are not made by men afraid
Lest somebody else gets ahead;
When everyone works and nobody shirks,
You can raise a town from the dead.

And if, while you make your personal stake,
Your neighbor will make one, too;
Your town will be what you want to see.
It isn't your town—it's YOU.

—Anonymous.

* * *

According to John H. Sinberg, a large central real estate operator, Philadelphia's business center, which is less than one square mile in extent, will still be the business center of the city a thousand years from now.

Mr. Sinberg spoke to members of the City Business Club at their luncheon in the Hotel Adelphia. Not only does Mr. Sinberg think that Broad and Chestnut streets will be on the map ten centuries from now, but he told his listeners that Market street has a great future in store for it, and that the men who buy Market street properties now will be the millionaires of the future.

Mr. Sinberg also said that in his opinion, the up-stairs store was really in its infancy. He said that as it is now, hundreds of second floors along both Chestnut and Market streets are for sale because property owners refused to make them attractive for prospective tenants. He told of selling a store recently on Market street to a man for \$16,000 a front foot. "This man not so many years ago wouldn't pay \$2,000 a foot for the same property," said the speaker. "He said he was willing to pay the high prices offered because the large department stores would bring his business to him. He said that he could take advantage of the crowds that were attracted to their stores by the millions of dollars' worth of advertising, and that he didn't have to lay out a cent himself for space in the newspapers. There are lots of men like him. They take advantage of the prosperity that the department stores create."

* * *

Recently the Executive Committee of the Merchants' Association of New York passed a resolution which was drafted by the association's committee on city plan as follows:

"Your committee on city plan, by unani-

mous action, recommends that the Merchants' Association of New York advocate the reconstruction of the cupola upon the City Hall according to the plans originally designed by Mr. McComb, the architect of the City Hall, rather than upon any of the subsequent plans."

The history of the City Hall starts in 1803, when the City Council of New York passed a decree which provided for the construction of the City Hall. The building was designed by Mr. McComb, and was completed in 1814. The design of the original cupola was harmonious with the design of the remainder of the building, but no provision was made for setting a clock in the cupola.

The city decided in 1830 that it ought to have a clock on its City Hall. In order to make room for it the cupola was redesigned and rebuilt, its height being increased one story for the clock.

This 1830 cupola was burned in 1858 after a celebration of the laying of the first Atlantic cable, in which fireworks played a prominent part.

Efforts were made at that time to have the original cupola restored, but the demand for a clock prevented its success, and the cupola recently burned was built at that time, clock and all.

SUN-HEATED WATER.

Many homes in Southern California have solar heaters, which furnish the hot water for domestic purposes. The arrangement is simple, and consists of water pipes placed on the roof of a house under a glass top and underneath them some sheets of copper, painted black. Under the rays of the sun the water expands, creating a circulation thereof in the pipes until the water reaches the boiling point, and it will remain hot for more than forty-eight hours after the sun stops shining. It is not often that there is any failure of sunshine. For more than two or three days, and as a consequence there is hot water sufficient for all purposes with rare exceptions throughout the year. The cost of a solar heater is not great, and a handy man can make one for himself.—"Millard's Review" (Shanghai).

Permits for New Buildings

O is the abbreviation for owner. C is for contractor.

Philadelphia

Garage, Asbury Terrace and Verbena avenue, \$400. M. A. Roth (O), Camac and Cheltenham avenue, Oak Lane. Fred Storch (C), Oak Lane. Stone, 1 story 16x24 feet, slag roof.

As The Editor Sees It

WE had something to say under this head last issue about the growing demand that exists for homes and the apparent unwillingness of the operative builder to meet this demand because of the high cost of labor and materials. Just how acute the situation has become has been brought rather sharply to our attention within the past few days. In New York City on September 20 a conference met at the suggestion of the Building Material Exchange of that city to discover whether there is any fixed or valid reason why building construction should not go on much as usual during the period of the war. Marcus M. Marks, President of the Borough of Manhattan, presided at the meeting, which was held in the Municipal Building. President Mark's address, while applicable directly to the Borough of Manhattan, is so largely typical of conditions here and in other large centers of population that I am moved to quote it at some length. Said President Marks:

"War conditions come first in attacking business problems at this time. Everything that may interfere with whole-hearted concentration in our efforts to push the war to a successful finish, must give way. Still, we must not forget that stagnation in any legitimate industry will tend to undermine the general prosperity of our country; upon this continued prosperity we depend for our ability to finance our own and the allied forces.

"To manufacture beyond a healthy demand for output is always dangerous; but a condition where manufacturing practically ceases in spite of an overwhelming demand, requires investigation and action. This conference has been called, on the suggestion of the Building Materials Exchange, for interchange of views on the present building situation. Many builders and capitalists have suspended constructive operations largely on account of high prices of materials. The question arises: Is the present level of prices likely to be maintained for some years to come? If so, is it not folly to allow the building industry and all the collateral industries depending upon it, to stagnate when the demand for homes, particularly in Manhattan, so far exceeds the supply? Should population be permitted to seek homes elsewhere because Manhattan builders and their backers are waiting for a drop in prices of material which may not come?"

* * *

THESE are fair subjects for discussion. With the interests of New York deep at heart, I await the developments of this conference with interest, yes, grave concern. The records of our Building Bureau show the following figures regarding building construction:

1914.

Dwellings	\$1,682,000
Tenements	18,916,000
Hotels	975,000
Stores, Lofts, etc.	9,284,000

Office Buildings	7,190,000
Manufactories & Workshops	2,618,450
Schools	298,000

Totals\$23,852,925

* * *

VERY large items of 1916 and 1917 are high buildings and stables and garages planned to anticipate the restrictions of the new zoning laws.

"It may be noted that of all plans filed during the current year, less than \$500,000 worth of the work has been completed to date.

"About 40 per cent. of the work on new buildings now in course of construction is covered by plans filed in 1916.

"Estimated cost of new building plans filed during first 8 months of 1916 amounted to \$100,987,645.

"Estimated cost of new building plans filed during first 8 months of 1915 amounted to \$50,996,300.

"Estimated cost of new building plans filed during first 8 months of 1914 amounted to \$34,491,240.

...*"What will happen to business in general, if building is not resumed?"*

"Our business structure is like a row of bricks; if one falls, the whole row is in danger of going down. I trust that we shall develop facts to-day which will warrant a new healthy optimism encouraging resumption of such building operations as are needed to supply legitimate demands of our city. We should not encourage the slogan, "Business as usual." Government business is paramount. *But for the future welfare of labor, and home-seekers, as well as other important interests, we should consider seriously present building conditions.* L

* * *

THE September number of the *Journal of the American Institute of Architects* presents a series of fine plates showing upon what an elaborate scale the British Government has gone into the work of providing necessary housing accommodations for workmen at Woolwich. Commenting editor-

ially upon these plates and the very interesting and informative paper accompanying them, the *Journal* remarks:

"The significant thing about the vast governmental housing undertakings of Great Britain, of which Well Hall, one of the most important, is illustrated in this number of the *Journal of the American Institute of Architects*, does not lie in either the technique of the operation or the result. The significance lies in the fact that War has given a prominence to housing such as Peace could not give. War has made us see that the philosophy of housing—call it the science if you will—as applied on so vast a scale by Germany, was really inspired by her profound analysis of what would be necessary first to prepare for war, and second to conduct a war. *Germany foresaw what England had to learn—that a modern army is dependent upon the industries at home; that War demands more from industry than does Peace; that the meeting of those demands which mean national life or death depends upon obtaining the utmost in skill and energy from the workers who supply the soldiers; that workmen cannot put forth those qualities except under living conditions which constantly renew and thus maintain the highest vitality.* Peace has enunciated this economic principle with a voice which has been drowned to a whisper. War shrieks the message to the nation and makes it heard above all other cries, and England has heard so well that in addition to the extraordinary plans which have already been executed—under financial and industrial pressure which only add to their extraordinary character—she is looking far ahead into the future and making ready to provide new living conditions to replace the old. She is now far-seeing enough to understand that the essential principle of her national existence cannot be left to the speculative builder.

* * *

INDEPENDENTLY and in spite of the emergency housing which already has been undertaken by industrial corporations and by private capital, the industrial housing situation in the United States is at this moment a vital and yet scarcely recognized factor in our war-time industrial production, upon which all other things depend. *A most casual examination of the facts will bring one face to face with the knowledge that unless the Government will cope with the problem of housing workmen as it is meeting the problems of housing machinery, we shall shortly be at an impasse.* It is useless to encourage industry to expand while leaving the housing of workmen to chance and caprice.

"At Bridgeport, Connecticut, for example, a new factory for war purposes

is being rushed to completion. It will employ a thousand operatives. *There is at present, as we are informed, not a single house available for rent in Bridgeport, nor is there any capital available for building.* The Government is, we are told, furnishing money for the new building to contain the machinery while the housing problem is totally ignored! Could anything be more shortsighted? This is one situation in many, and fresh ones are developing with every step which the Government is taking toward *speeding up production.*

* * *

OUR ability to build ships is found to be based upon first housing the workmen. *In almost every industrial center, large or small, the cry is for houses and more houses.* The private capital usually available for operations of this kind is being diverted to other uses where the gains promise to be large. The very war-time hazard attending upon many of these demands for more houses deters capital, while the present cost of building also adds an element of uncertainty as to the future of the investment. It is by no means certain that rentals based upon present building costs will continue to be payable by workmen, and there are doubts, in many cases, as to the permanent nature of the industries for which houses are needed.

* * *

THE situation has developed with amazing rapidity and will soon reach a climax that cannot be ignored. It seems that it might have been possible to foresee this by making a simple study of the human element involved, but the problem is now here and has assumed menacing proportions. Upon the speed and thoroughness with which it is met will depend our ability to supply the equipment without which we cannot successfully perform our share in France. There seems to be no other agency capable of quickly assuming the direction and control of the problem than that of the National Government.

"This was the step which England found it necessary to take, and in that country the need was met with the same degree of energy and ability which has characterized the remarkable industrial transformation which the war has forced her to undertake. More than that, she was wise enough not to try to meet the situation by temporary makeshifts, but by building permanent houses which are to remain as a national asset, or else by building, as she did in some localities, other buildings such as hospitals, which later easily can be converted into substantial modern houses at low rentals. She met the problem squarely and with economic astuteness.

FOR the United States Government to extend financial aid to home building, in whichever one of the forms that have been put into operation in every other civilized country, would be more of a jump than a step. We are inexperienced in dealing with the question, whereas European countries without exception have all extended financial aid to the building of homes for workmen. But it would be as absurd to argue over the principle involved, at this moment, as for an engineer to hesitate at cutting down an apple orchard in order to build a bridge to save a division of troops. War is relentless. It asks plain questions and insists on getting the answer. The answer to this war is industrial organization. The answer to that is homes for workmen to live in. *The answer to that is to build them now and cut off the delay and waste involved by waiting for somebody else to do it.* When we are spending at the rate of \$50,000,000 a day, delays cost money!

* * *

AS to the method by which the Government should extend aid it seems evident from the facts now available that private capital only needs to be supplemented to the extent of relieving it of the risk consequent upon the uncertain nature of those undertakings where permanency is involved. To meet this same condition in the expansion of industrial plants and not to meet it by absolutely assuring the necessary house building is to refuse to recognize an elementary business principle. The methods of extending governmental aid by the principal countries of the world are set forth in the volume published by the Department of Labor in 1915 and are familiar to those who have studied the housing question in European countries.

"The Government is already at work in a preliminary consideration of plans for coping with the housing shortage at some of the vital points, and it seems not unlikely that the building of Government-owned workmen's houses may begin in the near future. On account of the shortage of capital, several large industrial housing schemes which had been started have now come to a stop.

* * *

IN Washington, the congestion has now so hampered the administrative function of the Government that Congressman Fitzgerald, of New York, has advocated the erection of a three-story temporary office building, of frame construction, with a ground-area of 350,000 square feet, and designed to provide space for 10,000 employees. It is planned to erect this building on the Mall, not far from the Capitol, and while the site selected seems less desirable than

others which might have been found, this plan would undoubtedly prevent the further mulcting by owners of buildings, who are now collecting no less than a million dollars yearly from the Government. Yet one hesitates to think of what might happen in the event of a fire in such a structure. Temporary buildings are undoubtedly the answer to the immediate needs, but they must be made safe to life, at no matter what expense."

* * *

THOSE builders, speculators and others, who have been taking a gloomy view of the general outlook must perceive that while constructive activity has not naturally experienced a more or less severe set-back as the result of conditions traceable to and growing out of our immersion in the world conflict this situation is not likely to be

of more than temporary duration and needs only the restoration of trade confidence to get back to sound commercial levels.

With large governmental problems of housing and equipment to be met, with a growing demand for industrial buildings and a ready market waiting operative dwellings the need of the hour is for men who are willing to face the slight, almost negligible element of risk to resume their normal place in affairs. As pointed out last week there is little or no prospect of any material recession in building costs. Materials are up to remain up for years to come. Labor conditions are not likely to undergo any marked improvement. The demand that exists is one prepared to meet the new scale of costs. Optimism and nerve are the passports to success.

EDITORIAL NOTES

Evidence multiplies that the stagnation of activity in the field of building construction, that has now maintained for a protracted period, is rapidly drawing to a conclusion. The tone of the building industry is better, with structural interests generally beginning to feel the force of improved conditions by a greater volume of sales and more frequent inquiries for future requirements. There has been a group of individuals prominent in the building fraternity that have held for some months that the period of depression and structural inactivity experienced this year was but a temporary affair that, while decidedly upsetting to the stability of the industry, was a matter that undoubtedly would result in the ultimate improvement of building conditions throughout the United States. From this period of doubt and stress the structural trades as a unit will emerge with a more satisfactory understanding and a fuller appreciation of the meaning of co-operation between its component parts. The atmosphere will be clarified and the future progress of the building interests be more fully assured.

James P. Beck died last month at the Presbyterian Hospital, Chicago. At the time of his death he was general manager of the Portland Cement Association, with headquarters at 111 West Washington street, Chicago. Mr. Beck was born January 27, 1886, at Odell, Ill. He was graduated from the University of Illinois in 1907 with the degree of A. B. in L. & A. On his graduation he entered the employ of the Universal Portland Cement Co. During the fall of 1915, Mr. Beck was chosen to formulate plans for broadening the scope of work of the Association of American Portland Cement Manufacturers, the headquarters of which were then in Philadelphia. After several months' work, Mr. Beck submitted at the annual meeting of the Association in De-

cember, 1915, a very comprehensive plan which was adopted essentially in its entirety.

One of the most forcible reasons why the building situation can be said to be better to-day than it has been for a long time is found in the volume of purely speculative work that is daily coming to light. During recent months New York City, as well as a number of other important centers of community interest, has suffered from the lack of speculative and investment construction. This condition created a demand for accommodations for both housing and industrial purposes that was considerably in excess of the supply, and difficulty was experienced in providing for those in the market for renting space. In the last week there have been a number of definite instances in which prospective builders of speculative operations have matured their plans for an early commencement of activity. The fact that some pioneers in this field have confidence enough in the future for buildings of this type will naturally influence others to follow. The result will be a stronger building situation generally, with increasing optimism in all lines of endeavor that are connected with the structural interests.

* * *

Mr. Sullivan W. Jones, representative of the American Institute on the National Conference Committee to consider the Quantity System as a means of checking the economic waste in the present method of competitive bidding, reports that the committee will hold its first meeting at the Octagon about the middle of October, and that of the eighteen associations invited to send representatives, ten have agreed to do so and three others have promised to take the matter up at meetings in the near future.

Although the prospects of a renewed building movement are better to-day than they have been for weeks there is still much to be accomplished before the best results are within the range of possibility. The unsatisfactory condition of the labor market is an important factor that will require considerable adjustment. The dealers in structural materials and supplies must assist in a stabilization of the commodity markets with prices returned to a figure that more nearly approximates the normal. The institutions and concerns that are influential in the financing of important structural projects must revise their attitude to meet the existing circumstances. The building contractors and their dependent subcontractors must be brought to a realization that they will occupy a prominent part in the predicted movement and that in a large manner their efforts will be a factor in improving the conditions as they exist at present. Only by the most complete co-operation throughout all branches of industrial and commercial activity can the best interests of the building industry be served. By this means an industry that has suffered to a degree through the national crisis, that was barely approached in other lines, can be brought back to its former eminence and influence.

* * *

In general the situation in the cement industry is satisfactory. The railroad freight congestion has been relieved and difficulty from this source has been practically eliminated. Shipments on contract are now coming through in reasonable time and a much better feeling is apparent. Cement prices are holding firmly to their established level and there are no signs of a fluctuation. One of the best indications of the favorable position of the cement industry is the recent statement of a prominent producer that for the first fifteen days of September, 1917, the shipments of the concern were 44 per cent. in excess of those for the same period last year.

* * *

A full realization of the existing dull condition of the structural steel industry is possible through the recent announcement made by the Bridge Builders' and Structural Society, that only thirty-eight per cent. of the total capacity of the bridge and structural shops of the country was contracted for during the month of August. While there have been some signs of latent activity at distant localities, the Metropolitan district shows no indication of a building movement, including other than that type of construction work that requires none or very little structural steel. The interests that have in contemplation the erection of steel frame structures in New York and vicinity are holding them in abeyance for the expected Presidential announcement in regard to the fixing of steel prices and the control of output. It is generally conceded that only by drastic action from Federal sources can the existing unsatisfactory situation be relieved, and until this action is taken or some definite assurance made to the consuming public, there is little prospect of a re-

sumption of building activity on a large scale. During the past week the only bookings of consequence were for Government work or other construction that was the natural outgrowth of Federal military activities.

Warren Webster & Co., Camden, N. J., announce the appointment of S. E. Vance as Washington district manager, with offices at 301 Southern Building, Fifteenth and H streets, ... W., Washington, D. C.

* * *

On September 12th a committee from the Philadelphia Master Builders' Exchange, composed of Joseph M. Steele, chairman, James W. Davie, William J. Doyle and A. Raymond Raff, secured an interview with Mayor Smith and Director Datesman with the view of having the ordinance prohibiting the occupation of streets with building materials in the central section of the city, bounded by Spring Garden street, South street, Delaware and Schuylkill Rivers, and on Broad street from Lehigh avenue to Washington avenue, modified sufficiently to not interfere so seriously with the conduct of the building business within the proscribed area.

Mr. Steele reports having had a very pleasant hour with the Mayor and his Director, and the Mayor promises to not strictly enforce the ordinance where the builder shows a disposition to keep his materials off the streets as much as he possibly can.

No permits will be issued for the use of streets, but building materials entering into the construction of the building may be stored on the streets during the day time, but each evening the streets must be cleaned and the material so stored piled within the building line. Old materials must be removed from the site at once.

It is the hope of the Legislation Committee that the builders can operate under the above-mentioned provisions temporarily at least, as they expect to secure further modifications later.

Federal Radiator Co., New Castle, Pa., it is reported, has received an order for 150 hot water radiators for use in the Government's army cantonment building.

CONVENTIONS, MEETINGS AND EXPOSITIONS OF TRADE INTEREST UNDERLINED FOR OCTOBER, 1917.

OCTOBER 7-11—NATIONAL PAINT, OIL AND VARNISH ASSOCIATION, convention, Congress Hotel, Chicago, Ill. George V. Horgan, secretary, 100 William street, Manhattan.

OCTOBER 15-17—NATIONAL HOUSING ASSOCIATION, annual meeting, Chicago, Ill.

Lawrence Veiller, secretary, 105 East Twenty-second street, Manhattan.

OCTOBER 17-19—NATIONAL HARDWARE ASSOCIATION and American Hardware Manufacturers' Association, joint convention, Atlantic City, N. J. Headquarters at Marlborough-Blenheim.

OCTOBER 26-27—AMERICAN IRON AND STEEL INSTITUTE, annual meeting, Cincinnati, O. Headquarters Hotel Sinton.

LARGE COMPANY FORMED.

Will Do National and Foreign Engineering Work of Every Kind.

About two weeks ago the Hedden, Pearson, Starrett Corporation was incorporated under the laws of the State of Delaware for the purpose of acting as consulting engineers, contractors for engineering work, contractors for operation, purchasing agents and representatives of foreign corporations in the following industries: Steam and electric railways, tramways, highways, bridges, canals, hydro-electric power plants, steam power plants, submarine dredging and rock work, shipbuilding, mining, docks and waterfront improvements, building construction, chemical works, electrical equipments, water works, street lighting, telephone systems, etc.

The following is a selected list of engineering work and building construction, with which the personnel of the corporation has been identified, as principals:

Metropolitan Life Insurance Company's building, Madison Square, Manhattan; Sears, Roebuck & Company's building, Chicago, Illinois; Electrical Development and Power House, Toronto, Canada; Rio de Janeiro Tramways Light and Power plant, Rio de Janeiro, Brazil; Hotel St. Regis, Fifth avenue, New York; Hotel Taft, New Haven, Conn.; San Antonio Land and Irrigation Company's plant, San Antonio, Texas; Mexico Northwestern Railroad, El Paso, Texas; Metropolitan Street Railway, New York; Prudential Life Insurance Company's building, Newark, N. J.; Union Railroad station, Columbus, Ohio; Oakland National Bank, Oakland, Cal.; Barcelona Traction and Light and Power plant, Barcelona, Spain; West End street railway system, Boston, Mass.; Dominion Coal Company's plant, Nova Scotia, Canada; Union Railroad station, Washington, D. C.; Wanamaker buildings, New York and Philadelphia, Pa.; Sao Paulo Tramway and Light and Power plant, Sao Paulo, Brazil; New England Gas and Coke plant, Everett, Mass.; Union Bank of Canada, Winnipeg, Canada, and Merchants Refrigerator Company's plant, Jersey City, N. J.

William H. Burr, D. Sc., is the director and has been tendered the presidency of the company. The vice-presidents are: Louis O. Hedden, Ward E. Pearson, Theodore Starrett, Edward H. Beckert and John V. Clermont. Harry J. Kane is the treasurer, and V. A. Van Valkenburg, secretary.

Barrett Specification Roof on
Niagara River Power-Station
of Buffalo General Electric Co.,
Buffalo, N. Y.

Why This Great Power-Station Carries a Barrett Specification Roof

THE great new Niagara Power-Station at Buffalo is a triumph of modern engineering. Every part of its equipment is designed for the highest possible production at the lowest cost per unit of energy.

Over the huge turbo-generators and other gigantic yet delicate machinery to which the slightest leak might cause serious damage, are 35,000 sq. feet of Barrett Specification Roofs.

Now this is, of course, a building where quality came first and cost second, and the fact that a Barrett Specification Roof costs *less per year of service* than any other permanent roofing counted for very little compared with the fact that it is the *best roofing to be had regardless of price.*

Barrett Specification Roofs are more popular than any other kind for covering permanent buildings

Designed and constructed by
Stone & Webster Engineering
Corporation, Boston, Mass.

This
is the
Bond
that
guarantees
your roof
for
20 years.

because, in addition to costing less per year of service, they require no maintenance, they take the base rate of fire insurance and, further, *they are guaranteed for twenty years, as follows:*

Guaranteed for 20 Years

We are now prepared to give a 20-Year Surety Bond Guaranty on every Barrett Specification Roof of fifty squares and over in all towns in the United States and Canada of 25,000 population and more, and in smaller places where our Inspection Service is available.

This Surety Bond will be issued by the United States Fidelity and Guaranty Company of Baltimore and will be furnished by us *without charge.* Our only requirements are that the roofing contractor shall be approved by us and that The Barrett Specification dated May 1, 1916, shall be strictly followed.

A copy of The Barrett 20-Year Specification, with roofing diagrams, sent free on request.

It's the Long Fire Travel in the Burnham Cosy Comfort Boiler That Makes the Short Coal Bill

IF you can keep the hot gases and smoke travelling back and forth inside a boiler long enough to extract the bulk of their heat, and still not make the draft sluggish; it's plain enough that less heat will go up chimney and more heat go into your radiators.

That back and forth action is what we call fire travel. It's this long fire travel in the BURNHAM Cosy Comfort Boilers that has a lot to do with making their short coal bills.

Our Engineering Department is at your service in solving Heating Problems

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

You Don't Waste Time and Energy

Chasing "FALSE ALARMS" when you use DAILY BUILDING NEWS. Every item is carefully verified BEFORE PUBLISHED—you receive all necessary details. It costs a trifle more than the "slush" building news in the daily newspapers, but—

IT'S WORTH THE DIFFERENCE.

If you don't know—at the psychological moment, who's building—you lose the job. We "put you next" before the news becomes common property. Let us show you, by samples, just how thorough, accurate, and timely is our—

Daily Building News Service

One small job pays for the service for an entire year. "Get wise" to a good thing. Address

BUILDING NEWS PUBLISHING CO.

PERRY BUILDING, PHILADELPHIA

USE

Ceil-Board

For Lining Bungalows, Damp Walls, Attics, Garages, Poultry Houses, Etc.

Thoroughly established as the most economical material for interior lining. Artistic, quickly installed, durable and dependable, it is just what you are looking for. It has been called by many "The Board without a Peer." Ceil-Board's the real board.

Garage, 6401 Drexel Road, \$2,000. Mrs. F. D. Casanane (O), on premises. Milton W. Young (C), Overbrook, Pa. Brick, 1 story, 15x23 feet, cement floor, tile roof.

The world is just chock full of men who failed because they expected buyers to romp right in and ask for goods. Modern business spends big money simply to get the buyer interested knowing that sales follow.

Don't lose your grip. Noah was 600 years old before he knew how to build an ark.

REAL GOLD UNMINED.

"I am here as the self-appointed representative of 900 trade and technical publications printed in the United States and circulated wherever the English language is spoken. How important they are in their relation to advertising may be understood when I tell you that they carry, in the aggregate, advertising to the amount of at least \$25,000,000 a year—one-eighth of all the advertising money that is spent for all forms of publicity in the country—and that these advertisers "stick" year after year because it pays them to stick.

I have bought, sold and written all kinds of advertising—pasted and printed, indoor and outdoor, consumer and dealer, technical and commercial—and I have reached the conclusion that there is more real gold as yet unmined in the trade press field than in any other field of advertising endeavor."—Extract from address by R. R. Shuman, before the annual convention of the Associated Advertising Clubs at Omaha.

There's one variety of advertiser who gets our Angora. This is the chap who can't afford a large space and doesn't advertise, as a regular thing, because a small space "isn't seen." Some of the biggest advertisers we have started out with small space. Ask them whether the small space is seen. If advertisers had to wait until their businesses developed to full page stature before advertising, there'd be mighty few advertisers. The big man becomes big by growth. And growth starts with the seed.

Philadelphia is one of the busiest building centers in the United States and "The Guide" is the only medium that touches this golden field.

For every "one" man you can mention who has succeeded without advertising we'll agree to name ten whose greater success has been due to advertising "direct." Moral Advertise!

No one suffers from a mean disposition like the fellow who has one.

Our specialty is Portland Cement that will stick and pass the City Department. **DAVID FRANCE CO.,** Tasker Street Wharf, Delaware River, Philadelphia.

Alterations and Additions

Garage, 125 South Third street, \$1,400. Philadelphia Quartz Co. (O), 121-123 South Third street. R. C. Ballinger (C), 218 North Third street. Alterations.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., Sept. 19, 1917. Sealed proposals will be opened in this office at 3 p. m., Oct. 31, 1917, for the construction of the United States post office at Hollidaysburg, Pa. Drawings and specifications may be obtained from the custodian of the site at Hollidaysburg, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Portland Cement, Sand or Gravel by the carload. Consult DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

As The Editor Sees It

THE problem of providing in congested centers, for the thousands of industrial war workers engaged in supplying material to the government and its allies has finally reached an acute stage. Commenting upon the condition which is to be met, the Philadelphia *Bulletin* remarks:

"A little bill for \$100,000,000—just as a starter—is put in by the Housing Committee of the Council of National Defense to erect homes for war workers in congested centers. Conditions were bad enough before we entered the war, but now are rapidly becoming worse owing to new contracts for enormous quantities of material let by the Government. In some sections the need is not great, but in others, where practically new industries are springing up over night in villages or small cities, it is becoming more difficult to care for employees than to secure them.

"If we assume that \$1,000 an individual would be sufficient to secure a roof, the sum asked for could care for only 10,000 men, and this is far less than the demand. To some extent corporations engaged in manufacturing are helping to meet the situation, but find it embarrassing. They have no idea what will be the value of these buildings when the war is over, and so far have been counting much or all of the cost as an overhead charge. One or two large corporations engaged in making munitions for the Allies became greatly embarrassed by this outlay.

IT costs about \$160,000,000 to build the pine shacks for our soldiers in camp, but this sort of construction will not be allowed in most sections where fire laws are strict. What makes the situation worse is the lack of labor to erect the new homes when the money is ready. A special committee is working on the problem and will report to the President this week. We cannot expect good work from homeless men, but once we are embarked on a policy of housing laborers, no one knows where it will end or what will be the result on real estate values in many parts of the country.

"In 1910 Detroit had a population of 465,000 and now claims double that number, due in great part to increase of manufactures incident to the war. This shows how our population shifts and that we have before us a serious problem at a time when speed is of the very essence of our war program."

* * *

GEORGE GRAY BARNARD, the sculptor, at the instigation of Charles P. Taft, modelled a statue of Abraham Lincoln that occupies a prominent place in Cincinnati. Artistically, the Cincinnati Lincoln is said to be a tour de force. Realistically, it is pronounced a brutal and unsympathetic rendering of the personality of the great liberator. The suggestion that a duplicate of the Cincinnati statue be made for a site near Westminster Abbey in London elicited a veritable storm of protest. It

appears that as a model for his Lincoln Barnard employed a work-gnarled, vividly seamed and unprepossessing rail-splutter, with the result that the finished work presents a Lincoln all hands and feet and lacking in most of the qualities of spirituality and tenderness for which the great war President was noted. How Robert Lincoln, only son of the great man, feels on the subject of the Barnard conception is revealed in letters published in a recent issue of the *Art World*. The first of these letters written by Mr. Lincoln in response to one addressed to him by Mr. Ruckstuhl is as follows: Hildene, Manchester, Vt., Sept. 16, 1917. F. Wellington Ruckstuhl, editor of the *Art World*, New York, N. Y.

My Dear Mr. Ruckstuhl—In reply to your suggestion that I should send you for publication a letter of protest against the erection in London and in Paris of the Barnard statue of my father, I find myself in difficulty owing to the vigor and fullness of your own articles in the June and August issues of the *Art World*. I have already expressed to you my deep sense of gratification that you have so earnestly dealt with this miserable affair, from both artistic and public points of view, and I can think of nothing to add in those regards. But, as you did not know my own personal feeling and opinion when you kindly sent me your published articles, and think that there are others who might care to know them, I am sending you a copy of a letter written by me to President Taft as

**DRAWING

soon as I heard of the London and Paris projects. I send also copies of letters giving the views of three gentlemen peculiarly able to express a personal opinion for reasons I indicate in notes appended to the copies. These you are at liberty to use as you may think proper.

Renewing my thanks to you for the helpful part you are taking in my efforts, believe me, very sincerely yours,

ROBERT LINCOLN.

THE letter to former President Taft to which Mr. Lincoln refers in the foregoing communication to Mr. Ruckstuhl is also given:
1775 N street, Washington, D. C., March 22, 1917.

My Dear Mr. President—I am writing to ask your consideration of a matter which is giving me great concern and to bespeak such assistance as you feel able to give me.

When I first learned through the newspapers that your brother, Charles P. Taft, had caused to be made a large statue of my father for presentation to the city of Cincinnati I very naturally most gratefully appreciated the sentiment which moved him to do this; when, however, the statue was exhibited early this winter I was deeply grieved by the result of the commission which Mr. Taft had given to Mr. Barnard. I could not understand, and still do not understand, any rational basis for such a work as he has produced. I have seen some of the newspaper publications inspired by him, one of which, printed in the *North American*, of Philadelphia, in November, and another in the *Literary Digest* for January 6 last, attempt to make explanations which are anything but satisfactory, to me at least. He indicates, if I can understand him, that he scorned the use of the many existing photographs of President Lincoln, and took as a model for his figure a man chosen by him for the curious artistic reasons that he was 6 feet 4½ inches in height, was born on a farm fifteen miles from where Lincoln was born, was about 40 years of age and had been splitting rails all his life.

The result is a monstrous figure, which is grotesque as a likeness of President Lincoln and defamatory as an effigy.

I understand that the completed statue has gone to Cincinnati to be placed. As to that I have nothing more to say, but I am horrified to learn just now that arrangements are being made for a statue of President Lincoln by the same artist, and I assume of a similar character, to be presented for location, one in London and one in Paris. I understand also that these statues are to be gifts by Mr. Taft. I do not think I have ever had the pleasure of meeting him, and I am, therefore, venturing to beg you on my account to intercede with him, and, if possible, to induce him to abandon his

purpose, if it is true that he has it in mind. I should, of course, have filial pride in having a good statue of my father in London and in Paris, of a character like the two great statues of him made by Augustus Saint-Gaudens, and that which I have good reason to expect in the Lincoln Memorial; now being modeled by Daniel Chester French. That my father should be represented in those two great cities by such a work as that of which I am writing to you would be a cause of great sorrow to me personally, the greatness of which I will not attempt to describe.

Believe me, my dear Mr. President, always sincerely yours,

ROBERT LINCOLN.

The Hon. William Howard Taft.

THE question at issue is one as to whether the sculptor is required to consider the factor of fidelity to his original in works of the kind. To that question the answers, we imagine, will vary somewhat widely.

UNDER the heading, "A Controversy in Bronze," the question is thus summed up by the *Philadelphia Public Ledger*:

"When Horace said that he would raise a monument more lasting than bronze and more regal than the pyramids he indicated a quality about a work of art that is a distinct detriment in case it is not of the most impeccable conception and execution. For the very permanency of the appeal becomes a continuous source of irritation from generation to generation. This in a nutshell is the trouble with the proposition to erect in London a duplicate of the Lincoln statue by George Gray Barnard now in Cincinnati by the grace of Charles P. Taft. For whatever merits this statue of Lincoln may have, and it undoubtedly possesses some qualities that an interpretative statue should have, it will be and is to-day a controversy in bronze, a contentious challenge to all those who knew and those who love the memory of the martyr President. As such it is certainly not worthy of indefinite repetition in public places here or abroad, where its reason for existence in this controversial form will not be understood.

"The very men who praise the Barnard conception rather give the case away in this issue of perpetuating it in London in the square near Westminster Abbey and the Parliament buildings, since they admit that it has rough-and-ready qualities that are far beyond either the family's conception of the Man—Robert T. Lincoln's, for instance—or the generally accepted embodiment of Lincoln familiar in the poetically studied figure of Saint Gaudens, which, if idealized, at least does not deliberately go out of the way to invent new attributes for a well-

known figure, which Barnard very frankly admitted that his study does. Indeed, he makes no bones about telling us in that Barnardesque manner which all who have sat at the feet of his Capitol statutory know so well that he took his idea from a native rail-splitter who apparently looked no more like Lincoln than any other uncouth figure broken by work on a farm would.

THE use of the living model is, of course, a commonplace of the sculptor's art, but the Barnard obsession over the model seems to have been the cause that led to the huge feet and coarse shoes and the so-called 'slouchiness' of pose that those who are averse to seeing the statue set up in London object to. This attitude may be taken without denying that Barnard was working out a legitimate problem in his Lincoln and that he has solved it in his customary dashing and brilliant manner. But while the problem may be one that can be left to an American community—Cincinnati in this case—to discuss and dispute *ad libitum*, it is not the kind of thing to fling in the faces of those foreign to our ideals, our heroes and our art."

THE estimated cost of buildings for which permits have been issued in Philadelphia during the last month, according to William G. Gamble, statistician of the Bureau of Building Inspection, amounted to \$2,252,765. This in comparison with the month of August shows an increase of \$698,650, and in comparison with the corresponding month of the previous year it shows a decrease of \$1,048,545. The following shows the character of the same:

Character.	Opera-tions.	Estimated Cost.
Dwellings, one story . . .	1	\$2,800
Dwellings, two story . . .	56	179,150
Dwellings, three story . .	11	72,500
Tenement houses	1	30,000
Manufactories	8	514,460
Workshops	6	33,700
Garages	62	111,255
Office buildings	5	82,550
Stores	3	57,300
Warehouses	3	57,000
Engine & boiler houses . .	1	800
Powerhouse	1	31,000
Depot	1	50,000
Places of amusement . .	1	280,000
Miscellaneous buildings .	10	30,025
Additions	121	439,320
Alterations and repairs .	183	177,345
Miscellaneous work . . .	82	76,190
Heaters	11	13,740
Fire-escapes	3	2,450
Signs	8	1,180

Totals 578 \$2,252,765
The estimated cost of all buildings for which permits have been issued for the

nine months ended September 30 amounted to \$29,523,465. In comparison with the corresponding period of 1916 it shows a decrease of \$6,395,270.

* * *

THE labor situation is disquieting in all parts of the country, and but for the good crop yield, which gives promise that food-stuffs will not generally go above present levels, it would be alarming. It is not surprising that with high prices prevalent on all sides wage-earners should claim more pay, but the disquieting thing is that higher wages mean still higher prices, and thus we travel in a circle, comments the market review of the National City Bank of New York City. At last the explanation is that the country is trying to do more work than there is labor to do it with. A vast amount of work is being done under rush conditions for the government, and the contractors have offered wages that would bring labor out of the regular industries. Sixteen cantonments have been built in different parts of the country at a cost of \$150,000,000, in three months, and about 8,000 to 10,000 workmen have been employed on each. The influence of this upon the labor situation has been widespread. Numerous shipyards are under construction, steel works and munition plants are crowded with orders and hundreds of new coal mines are struggling to get a share of the labor supply. The point has been reached where it is a serious question whether any further construction work should be done unless directly required by the war emergency. Where is the use in enlarging capacity when the present capacity of the industries cannot be manned. It may seem to an individual that he can enlarge his business profitably, but if he can only operate the new capacity by hiring labor away from other equally important work there is no gain, and the entire level of costs is being constantly raised by this process. It is reported that the government in some instances has taken steps to prevent its contractors from hiring labor away from each other, where all were working on a cost plus percentage basis, but something like that competition is occurring all around the industries. A movement to check it would probably be resented by the wage-earners, and like all price-fixing is open to serious objections. The real remedy all around is indicated by the high wages and prices: it is for the public to curtail consumption, in order that labor may be released for the war work.

* * *

THE United States Steel Corporation has led off with another wage advance of 10 per cent., and the other steel companies are following.

The coal miners, with whom a liberal settlement was made in April, are insisting upon another advance. The cost of living is not higher than it was in April, but the wages paid in other industries make the miners discontented; moreover, it is said that a shortage of cars, cutting down the working time is a grievance.

In the textile industries of New England a movement is on for a further round advance in wages.

The railway trainmen achieved a great victory last March by establishing the unit eight-hour day in train service. Train runs have remained practically unchanged, because they could not be changed except by moving division points or running lighter trains, which would increase costs more than the pay-

ment of overtime. The effect, as predicted, has been to add greatly to the overtime. It is understood that further requests from the trainmen are in preparation.

The final effect of this situation in the manufacturing industries is to constantly attract labor from the farms, thus curtailing the food supply, enhancing the cost of living in the cities and seemingly furnishing a reasonable basis for further demands by the wage-earners. We say "seemingly" because it is evident that at some point in this circle an influence should develop for the return of workers to the farms. Raising wages in the cities will never compensate for declining supplies of foodstuffs, if the higher wages continue to draw labor from the farms.

EDITORIAL NOTES

Los Angeles is one of the best examples of cities that are trying to protect their fine residential districts by means of ordinances forbidding certain industries within these residential areas. The entire city, with the exception of a few suburbs, is divided into industrial and residential districts. In the former areas all kinds of business and manufacturing are permitted; in the latter the ordinance forbids the carrying on of any kind of business or industry that would properly be regarded as objectionable in a residential area.

* * *

Harry Hahn, formerly with the Nazareth Cement Company, is now associated with the John P. Kane Company, 103 Park avenue, New York City.

* * *

What is designated as "Model Labor Colony" is being started on Staten Island by the Weymar Lumber Company in connection with the new \$2,500,000 garbage disposal plant that is being placed in operation. The colony is designed to house the working classes of this plant and other large industrial establishments in the vicinity. Work will be commenced at once on the construction of a number of cottages of five rooms each, equipped with running water, electric light, bath and toilet facilities, steam heat, etc. There will also be erected a large dormitory to accommodate single men and a restaurant for feeding the entire community.

* * *

Frank L. Patterson & Co. and Benjamin F. Kelley & Son, water heating engineers and manufacturers of heaters, announce a combination of interests under the name of the Patterson-Kelley Company, with offices at 26 Cortlandt street, New York.

* * *

If no more tangible benefit accrues the recent announcement of a fixed price for steel products has at least had an excellent psycho-

logical effect on the building trades. For a lengthy period the natural progress of the building industry has been impeded by the admittedly high prices of structural materials. Fabricated steel was one of the principal commodities for which an excessive price was charged, and the prime factor responsible for the withholding of important structural projects from an immediate start. With the price of steel regulated there remains practically only one great difficulty—delays in delivery—to be surmounted before building activity can return again to the volume of normal times.

* * *

Standard Asphalt and Refining Co., of Chicago, Illinois, has purchased the plants, trade marks and good will of the Sarcro Petroleum Products Company. The Cities Service Company, of 60 Wall street, New York City, is the new interest in back of this company, although the management remains essentially the same as before the change.

* * *

Work on the construction of the subway delivery loop that will encompass the central business section of Philadelphia has begun by the Keystone State Construction Company. With a corps of men on the job and derricks and other equipment on hand, ground was broken at three points in the line of the proposed loop. These points are at Eighth and Locust streets, the north side of Arch street east of Thirteenth street and west of Tenth street.

The delivery loop, regarded as the key to the entire high-speed transit system, will run from Broad and Arch streets under Arch street to Eighth street, under Eighth street to Locust street and under Locust street to Broad street. The estimated cost of the loop is approximately \$7,000,000.

* * *

The legs of the loop for which the Keystone State Construction Company has the contract

and on which work was begun, are Locust street from Eighth to Broad street and Arch street from Eighth to Broad street. The Eighth street contract, covering the construction of the loop from Arch to Locust street, was awarded to Smith, Hauser & MacIsaacs, Inc., of New York, but that firm withdrew its bid, saying that the cost of labor and material had risen since the original award of the contract, making it impossible for them to do the work. Bids for the work will shortly be re-advertised. It is estimated that it will take three years to build the loop.

* * *

T. M. Avery, one of the New York City representatives of the Blaw-Knox Co., of Pittsburgh, has gone to the Pacific Coast to take charge temporarily of the San Francisco office of that company. Edwin M. Ornitz, its San Francisco representative, has joined the Engineering Corps as first lieutenant.

* * *

With the steel situation partially adjusted and the other deterrent factors being eliminated and conditions daily substantially improved, the local building situation is in a better shape than it has been for a long period. The labor market is somewhat easier, and now that the construction of army and navy cantonments is rapidly nearing completion, thousands of skilled and unskilled men will be released into other channels of building work. The scarcity of mechanics lately has been experienced to a marked degree, and it is predicted that the men coming from work on the cantonment construction will be readily absorbed for private building operations.

* * *

American Iron and Steel Institute will hold its autumn meeting at the Hotel Sinton, Cincinnati, October 26 and 27.

* * *

The building material market as a whole is rapidly settling down to a realization that an important part of the responsibility for improving building conditions rests with the manufacturers and dealers in materials and supplies. There is a growing tendency among these interests to assist matters wherever possible by a close co-operation, through which the general welfare of the industry will be augmented. Although as a class building materials have not been substantially lowered in price, there is a feeling of additional stability to the market that has brought with it a more optimistic attitude on the part of the majority of interests.

* * *

Quite a number of important structural operations have been held in abeyance pending the adjustment of steel prices, and now that these have been settled greater activity in the building line is looked for within a short space of time. The predicted renewal of building will not be confined to any one type of structure. All types will be represented, and it is thought by those well informed that the erection of numerous speculative and investment buildings will soon be started as a result of the improved conditions.

* * *

The development of the Delaware River front in Chester was furthered last week by the sale of two properties, which will result eventually in increased business along the river. One was a strip of about three acres sold by Edwin D. Glauser to the Chester Shipbuilding Company, and the other was bought by Edwin D. Glauser from the Philadelphia Electric Company, which had purchased the land as a site for the big power plant now in course of construction at another point along the river.

The shipbuilding company bought the site to allow for future development of its business. Mr. Glauser intends to bulkhead his land along the river front and to use it in connection with his lumber shipping business. His plans call for the building of a wharf of such size that millions of feet of lumber can be stored upon it. The land purchased by Mr. Glauser is about the last of the available river front sites within the limits of the city.

* * *

Reports filed with Director Datesman, of the Philadelphia Department of Public Works, show that \$1,437,488 have been spent in the last twenty months on the construction of main and branch sewers. The work has been done mainly under the supervision of Chief Albright, of the Bureau of Surveys. Chief Albright has also been in charge of the construction of the twenty-two bridges which the city has contracted for in the last twenty months. In this work the chief has been assisted by Jonathan Jones, of the Department of Public Work.

* * *

Crippled by losing many employees who have left the Electrical Bureau to occupy better positions elsewhere or to enter military service, Chief McLaughlin has been forced to ask private companies to assist the city in repairing police and fire signals in cases of emergency. Recently the situation became so acute that Chief McLaughlin appealed to the Philadelphia Electric Company, the Philadelphia Rapid Transit Company and telephone, telegraph and steam railway companies to assist the city, if necessary.

* * *

Architects and building contractors throughout this city, almost without exception, feel that the action of the Federal Government in regard to the regulation of steel prices was a decided step in the direction of encouraging a strong building movement. They freely state, however, that a fixed price will not of itself make an immediate revival of building possible. The question of the available supply, with prompt deliveries, enters in a large way into the existing building situation, and it is from the scarcity of materials and slow deliveries that the most difficulty is at present anticipated.

* * *

National Housing Association will hold its annual meeting at Chicago October 15-17, 1917. Headquarters, Hotel LaSalle. For information inquire of Lawrence Veiller, secretary, 105 East Twenty-second street, New York City.

Few contracts were awarded in Philadelphia last week on building construction work for industrial firms. A single transaction, however, that of the Philadelphia Electric Company's new power station at Beach and Palmer streets, was closed at an \$8,000,000 figure. Factory alterations at Randolph street and Columbia avenue, for McNeill & Co., will cost \$4,000. Another large deal was that for four buildings of the new Tacony Ordnance Company, at Tacony, \$500,000. Factory improvements at 1713 Sansom street, for the Quaker City Rubber Company, will total \$5,000.

* * *

National Municipal League will hold its twenty-third annual meeting in Detroit, Mich., November 21-24, with headquarters at Hotel Statler. For information address the secretary, Clinton Rogers Woodruff, 703 North American Building, Philadelphia, Pa.

* * *

Progress in erecting the new municipal pier at the foot of McKean street, on the Delaware River, has been so rapid that Director Datesman, of Public Works, will advertise for bids for the final completion of the work. The entire cost of construction of the McKean street pier will be \$1,719,000. This cost covers the item of \$200,000 for purchasing the land. The pier, which will be thrown open to the public on June 1, 1918, is included in the Southwark group of piers, one of which has been built at Catharine street, and a second at Christian street. The construction of these piers is a first step toward an integral system of railroad, pier and harbor service that will give this city a service unequaled anywhere in the world.

* * *

A fixed basic price for structural steel will be of little avail if there is no fabricated material to be obtained or if its delivery is impossible within a period of six months or more. If there could become assurance that the desired amount of structural steel would be forthcoming within a reasonable period after the contract is placed there undoubtedly would be a marked improvement in the building conditions, not only in the Metropolitan district, but throughout the entire country.

The **National Hardware Association** and the **American Hardware Manufacturers' Association** will hold their annual joint convention at Atlantic City, N. J., October 17-19, with headquarters for both associations at the Marlborough-Blenheim.

DEATH OF CLINTON W. SWEET.

The death is announced of Clinton W. Sweet, founder of the New York "Record and Guide," the "Architectural Record," "Sweet's Architectural Catalogue" and other publications of note in the building and architectural field. Mr. Sweet retired from active business pursuits in 1912, due to a nervous malady, and was in his 66th year. He was widely known and universally esteemed.

AIR COOLING SCHEMES FOR HOUSES

Dr. Alexander Graham Bell, Inventor of the Telephone, Describes Interesting Experiments Conducted by Him for Cooling the Air in His Home—Discoveries He Made in Applying Scientific Ideas to an Every-day Problem.

Speaking on the subject of "Prizes for the Inventor" before the graduating class of the McKinley Manual Training School in Washington, Dr. Alexander Graham Bell told the graduates about the experiments he had been conducting for cooling the air in his own home and emphasized the possibilities in this direction. This part of his address as published in the "National Geographic Magazine," is given herewith:

The problem of cooling houses is one that I would recommend to your notice, not only on account of your own comfort, but on account of the public health as well.

I have found one radical defect in the construction of our houses that absolutely precludes the possibility of cooling them to any great degree. You will readily understand the difficulty when you remember that cold air is specifically heavier than warm air. You can take a bucket of cold air, for example, and carry it about in the summer time and not spill a drop; but if you make a hole in the bottom of your bucket, then, of course, the cold air will all run out.

Now, if you look at the typical tropical houses, you will find that they are all open on the ground floor. Supposing it were possible to turn on a veritable Niagara of cold air into a tropical house, it wouldn't stay there five minutes. It would all come pouring out through the open places below and through the windows and doors. If you want to find your leakage places, just fill your house with water and see where the water squirts out!

I began to think that it might be possible to apply the bucket principle to at least one room in my Washington home, and thus secure a place of retreat in the summer time. It seemed to be advisable to close up all openings near the bottom of the room to prevent the escape of cold air and open the windows at the top to let out the heated air of the room.

Dr. Bell's Own Experiments.

Now, it so happens that I have in the basement of my house a swimming tank, and it occurred to me that since this tank holds water, it should certainly hold cold air; so I turned the water out to study the situation. The tank seemed to be damp and the sides felt wet and slimy.

I reflected, however, that the condensation of moisture resulted from the fact that the sides of the tank were cooler than the air admitted. Water vapor will not condense on anything that is warmer than itself, and it occurred to me that if I introduced air that was very much colder than I wanted to use, then it would be warming up in the tank and becoming dryer all the time. It would not

deposit moisture on the sides and would actually absorb the moisture there.

I therefore provided a refrigerator in which were placed large blocks of ice covered with salt. This was placed in another room at a higher elevation than the tank, and a pipe covered with asbestos paper was employed to lead the cold air into the tank.

The first effect was the drying of the walls, and then I felt the level of the cold air gradually rising. At last it came over my head. The tank was full, and I found myself immersed in cool air. I felt so cool and comfortable that it seemed difficult to believe that Washington stood sizzling outside. I climbed up the ladder in the swimming tank until my head was above the surface, and then found myself breathing a hot, damp, muggy atmosphere. I therefore speedily retreated into the tank, where I was perfectly cool and comfortable.

Guided by this experience, I tried another experiment in my house. I put the refrigerator in the attic and led the cold air downward through a pipe covered with asbestos into one of the rooms of the house. The doors were kept shut and the windows were opened at the top. The temperature in that room was perfectly comfortable, about 65 degrees F.

At that time the papers were speaking of some ice plant that had been installed in the White House and congratulated the President upon a temperature of only 80 degrees F. when the thermometer showed 100 degrees outside. At this very time I enjoyed in my house a temperature of 65 degrees, with a delicious feeling of freshness in the air. Even when the air had risen to the same temperature as the rest of the house, as measured by a thermometer, the room still felt cool, because the air was drier, thus promoting perspiration that cooled the skin.

Selling Cold Air in Paris.

In this connection I may say that there is a very interesting cooling plant in Paris, France, run by the Societe de L'Air Comprime. Very many of the cafes and restaurants in Paris have cold rooms for the storage of perishable provisions, and these rooms are cooled by compressed air supplied by this company.

The plant consists of large pipes laid down under the streets of Paris, with small branch pipes leading into the cafes and restaurants. At a central station steam engines pump air into the pipes and keep up a continuous pressure of from four to five atmospheres. As there are several hundred kilometers of these pipes under the streets of Paris, they form a huge reservoir of compressed air at the ground temperature.

In the cooling room of a cafe they simply

turn a little cock and admit the compressed air into the room. A gas meter measures the amount of air admitted and charges are made accordingly.

The compressed air, by its expansion, produces great cold, and the cooling effect is still further increased by allowing the air to do work during the process of expansion. Dumbwaiters, elevators, and even sewing machines are thus run very economically in connection with the system by means of compressed air engines.

Will Our Cities Be Artificially Cooled?

Now, it appears to me that this process might very easily be developed into a plan for the cooling of a whole city. You would simply have to turn a cock in your room to admit the fresh air.

A DROP OF INK.

A drop of printer's ink
May make a thousand think.
A single drop
May keep your shop
From getting on the blink.

A drop, when hardly dry,
Makes many people buy.
It helps your biz',
And therefore is
A goodly thing to try. —Ex.

It isn't enough to just advertise. There is competition these days in advertising, as in other things. You must make your advertising attractive. You must make it say something,—something definite, original and convincing. If you lack faith in your own ability to do this, let us do it for you. Give us the facts. Talk to us just as you would to a prospective buyer. That is the kind of talk that makes profitable advertising. We'll look after the verbal frills. That's our business.

Without energetic effort a man must remain in a rut and can never expect to share with his hustling, up-to-date competitor. Quoting the words of a gifted scribe: "Health attends the man who acts. Wisdom guides him. Hope frees him. Joy helps him. Power moves him. Progress marks him. Fame follows him. Wealth rewards him. Love chooses him. Fate obeys him. God blesses him. Immortality crowns him."

Do you get "The Guide" regularly? You should. Better subscribe now, while you think of it, and keep in touch. The man who fails to get and to read carefully the trade paper of his chosen line, is missing a whole lot of valuable data that should be at his command.

You can't achieve anything worth while, whether it's peddling pills or discovering uncharted rivers, without advertising. If Columbus hadn't gone back and kicked up a racket about it, nobody in the Old World would have known yet that he had discovered anything.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Competitive plans wanted on Lu Lu Temple, to cost about one million dollars, to be built on Parkway, Philadelphia. Winner of competition will receive large monetary prize. For details consult W. Freeland Kendrick, Lu Lu Temple, Philadelphia.

Twin Residence, Sixty-third and Overbrook avenue, Philadelphia. Architect, private plans. Owner, Mrs. White, care of builder. Stone and brick, 2½ stories, 57x53 feet, slate roof, hot water heating, combination lighting, tile work, parquetry floor, wire work, pine floors. Owner taking bids, due October 8. Standard Const. Co., 1713 Sansom street, is figuring.

Hotel (alts.), Ninth and Chestnut streets, Philadelphia. Architect, private plans. Owners, Continental Hotel Co., Ninth and Chestnut streets, Philadelphia. Consists of new partitions, new bar fixtures and plumbing. Owners, care of Mr. Eckman, C. E., Ninth and Chestnut streets, taking bids, due October 10. In addition to those previously reported, Thos. Reilly, 1616 Thompson street; H. H. Wehmer, 1001 Lehigh avenue; John R. Wiggins Co., Otis Building; Lam Building Co., 1001 Wood street; E. E. Hollenback, Inc., 1804 Brandywine street, and Harry R. Rust, 724 Ludlow street, are figuring.

Factory and Garage (alt.), 522 Buttonwood street, Philadelphia. Engineers, Franklin & Co., Crozer Building, Philadelphia. Owners, The Craig Finley Co., 137 North Twelfth street, Philadelphia. Brick, concrete and steel, 3 stories, 62x80 feet, slag roof, steam heating, maple and concrete floors, metal lath, rolled steel sash, waterproofing. Engineers taking bids, due October 10th. H. E. Baton, 1713 Sansom street; F. L. Hoover & Sons, 1023 Cherry street; Barely White & Co., 1713 Sansom street; Ketcham & McQuade, 1029 Brown street; Wark-Yardley Co., 1737 Filbert street; J. Sims Co., 1125 Brown street, and Wm. Easterbrook, 146 North Fourth street; Metzger & Fisher, Otis Building; Geo. H. Frank, 1112 Cherry street, and F. Broome, 4003 Sansom street, are figuring.

Bank, 9 South Fifty-second street, Philadelphia. Architects, Peuckert & Wunder, 310 Chestnut street, Philadelphia. Owners, Guarantee Trust and Safe Deposit Co., 316 Chestnut street. Limestone, granite and brick, 1 story and basement, 15x67 feet, slag roof, hot water heating, electric lighting, tile and marble work, rolled steel sash and skylights, maple and tile floors, metal lath, wire work,

ornamental iron work. Architects have received bids.

Residences (16), Seventh and Chew streets, Philadelphia. Architect, private plans. Owner, Henry F. Bauer, on premises. Brick, 2 stories, slate and slag roofs, hot water heating, electric lighting, tile work, hardwood floors. Owner will build.

Garage, Office and Two Stores (alt. and add.), Twenty-sixth and Somerset streets. Architect, R. H. Pepper, 1808 North Seventh street, Philadelphia. Owner's name withheld. Consists of remodeling present building, brick, 1 story, roof ventilators, flush bulks, electric lighting, plumbing, cement and hardwood floors, metal ceilings, gasoline storage system. Plans about completed. Architect will be ready for bids October 10th.

Garage, Forty-sixth and Chestnut streets, Philadelphia. Architect, private plans. Owner, I. K. Davis, 2400 West Oakdale street, Philadelphia. Brick and steel, 1 story, 215x98 feet, slag roof, cement floors, steam heating, electric lighting, hollow metal skylights, fire doors. Owner has received sub-bids.

Buildings (7), Navy Yard, League Island, Philadelphia. Architect, private plans. Owners, U. S. Government, care of F. R. Harris, Chief, Navy Department, Bureau of Yards and Docks, Washington, D. C. Reinforced concrete and brick, galvanizing plant, 1 story, 61x122 feet; oxyacetylene generating plant, 1 story, 64x64 feet; engine house, 1 story, 69x140 feet; locker house, No. 1, 2 stories, 59x109 feet; locker house, No. 2, 1 story, 57x79 feet; two ramp toilets, 1 story, 15x67 feet, ready and slag roofs, cement floors, steam heating, electric lighting, rolled steel sash, fire doors, ornamental iron work, metal lath, safety treads, roof ventilators, wire work (plumbing reserved). Owners have received bids.

Saw Mill, Kiln and Lumber Shed, Venango street and Pennsylvania Railroad, Philadelphia. Architects, Ballinger & Perrot, Seventeenth and Arch streets, Philadelphia. Owners, A. Schoenhut Co., Adams and Sepvina streets, Philadelphia. Brick, steel and concrete, 1 story, 50x156 feet; 1 story, 41x58 feet; lumber shed, 53x112 feet; slag roof, cement floors, hollow tile, rolled steel sash (electric lighting and sprinklers reserved). Architect has received bids.

Residence (alt. and add.), 6314 Wissahickon avenue, Germantown. Architect, J. Horace

Frank, Real Estate Trust Building, Philadelphia. Owner, Frank B. Johnston, 6626 McCallum street, Germantown. Brick, 2½ stories, 35x11 feet and 16x24 feet, shingle roof, tile work (heating, plumbing and electric work reserved). Architect has received bids.

Office Building, Garage, Stable and Shed, Tioga, Livingston and Almond streets, Philadelphia. Architect, Maurice Golden, Crozer Building, Chester, Pa. Owners, Joseph Hyman & Sons, on premises. Brick, 1 story, 120x204 feet, slag roof (steam heat reserved), electric lighting, pine and cement floors, hollow metal skylights, gasoline storage system. Plans in progress.

Residence (alt. and add.), 6314 Wissahickon avenue, Germantown. Architect, J. Horace Frank, Real Estate Trust Building, Philadelphia. Owner, Frank B. Johnston, 6626 McCallum street, Germantown. Brick, 2½ stories, 35x11 feet and 16x24 feet, shingle roof, tile work (heating, plumbing and electric work reserved). Architect has received bids.

Quarters for Radio Operators, Navy Yard, Philadelphia. Architect, private plans. Owners, U. S. Government, Bureau of Yards and Docks, F. R. Harris, Chief, Navy Department, Washington, D. C. Brick, 2 stories, 55x27 feet, asbestos shingle roof, tin roof, hot water heating, electric lighting. Low bidders: W. O. Springer, Item No. 5, \$14,664, time 105 days; item No. 6, \$15,044, time 105 days. Hogg Const. Co., item No. 5, \$15,070, time 150 days; item No. 6, \$15,422.50, time 150 days.

Toilet Building (alts.), Ninth and Westmoreland streets, Philadelphia. Architects, Ballinger & Perrot, Seventeenth and Arch streets, Philadelphia. Owners, Surpass Leather Co., on premises. Consists of painting, plumbing and tile work. Architects taking bids, due October 10th. Philip Haibach Const. Co., Twenty-sixth and Thompson streets, and George Kessler Const. Co., Drexel Building, are figuring.

Garage, 6131-47 Cedar avenue, Philadelphia. Architect, H. E. De Hoff, 48 South Sixty-first street, Philadelphia. Owners, Berman Bros., 6019 Market street, Philadelphia. Brick, stone foundations, 1 story, 120x112 feet, ornamental brick front, slag roof, steam heating, electric lighting, cement floors, reinforced concrete work, hollow metal skylights, metal ceiling (gasoline storage system reserved). Owners taking sub-bids on all lines.

Transportation

Freight—Express—Motor Trucks

OF what use are a million Americans in France if their food, clothing and supplies are stalled in the railroad terminals throughout the United States? They must be transported to the seaboard.

Transporting goods to feed, clothe and equip our nation, its navy, its armies and our allies, is the most colossal task we have ever faced.

Every transportation unit must be used to the limit—the motor truck has become as necessary as the railroad.

Use your motor trucks for city to city hauling; to bring produce from the farms to the towns; to deliver merchandise to the door of the user; to speed up the loading and unloading of railroad cars and ships—to facilitate every phase of transportation.

The whole world is relying on motor trucks to do efficient and speedy work.

But the truck itself cannot do it alone.

OFFICERS, EXECUTIVES, MANAGERS—the responsibility is yours. It is your patriotic duty to see to it personally that your delivery system is adequately equipped and efficiently supervised.

It's the Long Fire Travel in the Burnham Cosy Comfort Boiler That Makes the Short Coal Bill

IF you can keep the hot gases and smoke travelling back and forth inside a boiler long enough to extract the bulk of their heat, and still not make the draft sluggish; it's plain enough that less heat will go up chimney and more heat go into your radiators.

That back and forth action is what we call fire travel. It's this long fire travel in the BURNHAM Cosy Comfort Boilers that has a lot to do with making their short coal bills.

Our Engineering Department is at your service in solving Heating Problems

Dwelling, 1172 South Broad street, \$400. Carson Realty Co. (O), Broad and Federal streets. F. R. Billotta (C), Seventh and Christian streets. Alterations.

STUDY THE ADVERTISING PAGES.

The average reader does not pay very close attention to the advertising pages unless he happens to be particularly interested in some product or is in the market for equipment or material. He is missing a part of scientific literature which offers suggestions as practical as the reading pages. He is also losing an opportunity of studying a subject which bears the most important relationship to every business on earth. No matter what line of work you may be engaged in, a knowledge of publicity and salesmanship is valuable. Every form of occupation to be made successful depends upon a degree of salesmanship. Study the advertising pages. They represent an expenditure of time, thought and money, which makes them well worthy of your attention.—"Municipal Engineering."

If you've got a specialty that will commend itself to builders, make a contract for space and start right in and talk about that specialty. Dwell on its good points, point out its advantages over similar devices, set forth its dominant qualities. And keep right on, week after week talking about it. If you don't book orders we'll bet you a big red pipkin that there is either something better on the market or your specialty isn't worth a kopeck noway.

DO IT NOW.

All we have is just this minute

Do It Now.

Find your duty and begin it

Do It Now.

Surely you're not always going

To be "a going to be," and knowing

You must sometime make a showing.

Do It Now.

HADDON HALL

Covered With

Merchant's Metal "SPANISH" Tiles

This popular seaside hostelry with its artistic red tiled roof has for years been a well known Atlantic City landmark. The selection of Merchant's Metal "SPANISH" Tiles for roofing purposes has not only given it a distinctive appearance but has been the means of protection from the ever present fire hazard in that city of frame buildings.

Merchant's Metal Tiles and Shingles are manufactured from galvanized steel, galvanized iron and sheet copper.

An important part of a fence is in the ground

It's the anchorage of the posts that determines whether the fence will keep its alignment and stand straight and true after years of service.

ANCHOR POST FENCES

are built on anchor posts which are driven into the ground and then held rigidly erect by two Anchor stakes driven diagonally through a lot's clamped to the sides of the posts.

Iron Railings and Entrance Gates. Lawn Fences, Tennis-Court, Poultry and Grand-Yard Enclosures, Arbors, Trellises, and Flower-Bed Guards. Catalogues of any or all are yours upon request.

The Standard Documents of the American Institute of Architects

The New Contract Documents of the American Institute of Architects are now on sale and replace the old Uniform Contract, which is to be discontinued

PRICES FOR SINGLE COPIES

Agreement and General Conditions in cover	 \$ 10
Bond of Suretyship	02
Form of Subcontract	02
Letter of Acceptance of Subcontractor's Proposal	01
Complete set in cover	 15

Trial set delivered upon receipt of nine 2-cent stamps.

These Documents have received the full approval of the Institute, through its Convention, Board of Directors and Officers. They are the outcome of nine years of continuous work by a Standing Committee on Contracts and Specifications. This Committee, comprising some of the ablest American architects, was assisted by the Institute's forty Chapters; advised by eminent legal specialists in contract law and aided by representatives of the Building Trade Associations of the United States. The forms have been officially approved by the National Association of Builders' Exchanges, the National Association of Master Plumbers, and the National Association of Steam and Hot Water Fitters.

As The Editor Sees It

THE *American Contractor*, of October 6th, devotes several pages to "A survey of the Building Situation," with a view to seeking out the underlying causes for the depression which has settled down on the industry. The causes, as developed by the survey, are three—the high cost of materials, the difficulty of getting and of keeping an adequate supply of skilled labor and the growing uncertainty regarding deliveries in certain indispensable commodities, such as structural steel. Other factors enter into the situation, such as the indisposition of the banks and insurance companies to finance operative and investment building on a large scale in face of the uncertainty of the future; the high money rate existent in certain sections of the country; the natural timidity of the investor about putting his money into tangible property at a time when the government is seeking new and drastic levies on incomes and the feeling everywhere prevalent that the war will not last and that with its termination material costs will drop to nearly normal.

* * *

THE depression which has choked the stream of building industry thus far this year has reached a point where it leaves many large interests high and dry; also a point that suggests the possibility of an early change—where the top of the dam is perhaps nearly reached and but little digging may be necessary to bring a brisk current into

the dry channels," says the *American Contractor*.

"On the one hand, we see a requirement for houses, apartments, factories and office buildings in different sections of the country, aggregating a considerable potential demand."

"On the other hand are men whose business is building, their equipment now idle, and others whose custom it has long been to invest their capital in buildings and building operations, now in a state of inactivity or diverting their money and their energies to other fields of activity.

"It is therefore worth while at this time for those who have the building interests at heart to seek out the underlying causes of this adverse condition with a view to determining what, if any, remedy can be applied, in the hope that thereby some suggestions may be brought forth that will tend to relieve a distressing situation. It is well to inspect the reasons why building is sluggish, when it is likely to revive and to consider whether a sound revival can be hastened by any action, concerted or otherwise, on the part of those most deeply concerned.

"The obvious questions are, how great is the need of more buildings of any class and do builders and investors want to put their money into them—if so, what is the restraining influence?

IT is easy to see that many who have derived profit from building in previous times are at present diverted from the industry either by some feeling of insecurity, by the hope of better profits from other sources or by expectation of a not too remote time when they can build at less costs than those imposed by to-day's wages and material prices. Are these men judging correctly or are they missing a favorable opportunity?

"Any business proposition calls for consideration of, first, the 'eternal verities'—the permanent, underlying facts—and, second, the conditions of the moment affecting those fundamentals and translating them into terms of present value.

"The basic elements of our present problem are the factors of supply and demand.

"Demand may be somewhat stimulated by overproduction or checked by scarcity; it can hardly be really regulated to any important extent.

"Supply can be expanded beyond all reasonable needs or it may be absolutely shut off; it can be regulated to any intermediate point.

* * *

TO say that demand for buildings increases as population increases is the barest statement of a fundamental fact and can only be regarded as a skeleton, to be clothed with the living flesh of actual, present day demands. To complete a statement which would apply to a primitive condi-

tion, account must be taken of the change in personal requirement—the demand per capita. Every person is entitled to something more than house room. The smallest child requires, in addition to house room, some fraction of a square foot of floor area and some fraction of a cubic foot of space in each factory and mill, producing clothing and food, in each store that distributes them, in some church, school, theater, railway station, hospital, bank and public building.

"And this requirement increases far more rapidly than does the population. As figures and data are lacking from which to formulate statistics let us see just what the development is.

"The grandfathers or great grandfathers of many of us, if living in the country, lived for a time in log houses. If in the city they climbed stairs to their offices and to their hotel rooms; their homes were heated with stoves and lighted by candles or oil lamps; they carried water for their baths. The requirement of each person in those days was very small in comparison with what we now consider the actual, bare necessities of life.

WITHIN the last fifteen years, which is as far back as there seems to be much attempt at building statistics, we have seen the farmers build new and substantial houses or improve the old ones, installing heating, lighting and water systems, with outside additions of silos and garages, unknown a few years ago.

"In the villages we see high schools, fire houses, police stations, banks and office buildings where formerly none existed.

"Coming to the smaller cities we find improved hospitals, asylums and other public buildings; better stores, factories and residences.

"In the big cities we have a wilderness of skyscrapers all filled and tenants clamoring for more space—office and loft buildings, hotels and apartment houses, equipped in a modern and expensive way. Even the tenement house dwellers are quartered in a manner unthought of twenty years ago.

BY taking the statistical line of population increase and comparing it with the line of cost of new building it is easy to prove that the country is so overbuilt that tenants must be lacking for a large part of the business and residence buildings. Such figures are disconcerting, but when we turn from them to a contemplation of the facts as visible to the eye, we perceive the unsoundness of the prior comparison.

"If a man who used to live in a \$2,000 house now lives in one costing \$10,000 that does not signify overbuilding. The same when an old office building or store

is replaced by a modern one; the figures of building operations are increased out of all proportion to the growth of population and yet no over-building is thereby indicated.

CAPITAL is, of course, required to finance the operations of the citizen building a residence, the manufacturer building a new plant and the merchant building a new store; but when we speak of capital in connection with the building industry, reference is supposed to be made to moneys used in large investment operations or loaned to speculative builders, the latter operating largely with borrowed money. War conditions affect both classes.

"Just now investment funds are to a considerable extent diverted to government loans; also, investors see opportunities that seem to promise large returns within a short period, leaving the money then free for building, by which time lower prices and wages are counted upon.

"Speculative builders rely upon the banks and insurance companies; these, feeling the strain of the government bond issues, are disposed to limit their loans. Moreover, in some sections lenders do not regard with favor loans upon factory buildings or even new additions to running plants. It is their view that, on a peace basis, the country is overbuilt as regards factories and is likely to become still more so. Such a condition, if realized, would mean an impaired value of factory buildings as security and a quite probable disturbance of the paying power of the borrowers. They are therefore scrutinizing such applications quite carefully and passing only those that are distinctly gilt-edged. This frame of mind is not universal and may be expected to disappear as the situation clears. The growth of American industry is an irresistible force.

"Some builders with available capital hesitate to employ it in building on account of prevailing costs. This shows questionable judgment. With steel and coal prices both stabilized, a favorable opportunity should be presented. The existent demand is so imperative and the promised returns so large that any softening of the materials market is likely to let loose such a flood of deferred business as will interpose a check and prevent the decline before it progresses far. To wait for the big decline is likely to mean letting the opportunity pass.

THE prospective builder who is watching for a clearing of the financial situation and the consequent easing of interest charges may be encouraged to look for it in the near future if the existing depression in Wall street continues. It has been observed in the past that such depressed conditions in the stock market tend to release

money for realty investment. Other things being equal, money will seek the safest investment.

"This is another question that is to an extent local, but in general it may be said that the present tendency in the application of the war taxation is to seek out intangible property and to tax incomes and securities which were previously not visible or exposed to such attention. A result that may be reasonably expected is a tendency to convert such investments into real property, in the view that it will receive more favorable consideration in the matter of taxation in the future than has been the case heretofore.

WE have thus seen that there is an existent and strong demand for at least some class of building in nearly every locality.

"It seems clear that conditions of supply are not likely to improve to any important degree on the other hand, there is a possibility that the labor situation may be worse next year than to-day, thus partly, at least, offsetting any reduction in building material prices.

"We believe that, when building costs are compared with prices of other commodities and when returns and security are considered, building offers one of the best inducements to builders and to capital.

"The *American Contractor* has been repeatedly asked to inaugurate a campaign of education. We have tried here to lay before you a hopeful but conservative presentation of the facts and conditions surrounding the industry at the moment. Now all our readers can help spread the gospel and 'boost building.' Let us make it a co-operative campaign. Do your bit!"

THE GUIDE has embodied in its series of comment upon the situation every one of the arguments advanced in the foregoing very full and complete study of conditions. We have arrived at the same general conclusion and that is, that nothing is to be gained by continued postponement of contemplated structural projects. There is a demand for new building and the difficulties in the way are not insuperable. What is needed is confidence in the present and in the future and the grit to meet conditions as they are and not as we would like to have them.

Learn to advertise. If you feel unequal to the task of preparing the kind of copy you ought to have, let us prepare it for you. Advertising is our business. We are always glad to help men who are honest enough to concede that they do not know it all. And the service won't cost you a penny if you contemplate joining the army of "Guide" advertisers.

EDITORIAL NOTES

American Iron and Steel Institute will hold its autumn meeting at the Hotel Sinton, Cincinnati, October 26 and 27.

* * *

Alfred R. Ullrich, architect, 371 Fulton street, Brooklyn, recently commissioned Captain of Engineers, is now with the 302nd Regiment at Camp Upton, L. I. He went to the Officers' Training Camp at Plattsburg last May and passed the engineering examination.

* * *

National Machine Tool Builders' Association will hold its sixteenth annual convention at the Hotel Astor, New York City, on Tuesday and Wednesday, October 30 and 31.

* * *

The Stanley Works, New Britain, Conn., will buy and outfit an ambulance for use with the American Expeditionary Forces. Employees in the main plant and the branches in Chicago, New York, Bridgewater, Mass. and Niles, Ohio, will be invited to subscribe.

* * *

National Paint, Oil and Varnish Association held its convention at the Congress Hotel, Chicago, Ill., October 7-11. George V. Horgan, 100 William street, Manhattan, is secretary.

* * *

The National Lime Manufacturers' Association has published in the form of bulletins addresses by Miss Frances Kellor on "The Americanization of Workmen Around the Lime Plants," and by H. J. Russell on "The Necessity for Lime Manufacturers to Stop Cutting Prices and Get More for Lime."

* * *

National Housing Association held its annual meeting at Chicago October 15-17, 1917. Headquarters, Hotel LaSalle. Lawrence Veiller, secretary, 105 East Twenty-second street, New York City.

* * *

Freling Foster, until recently advertising manager of Hughes Electric Heating Company, Chicago, has joined the advertising staff of the Society for Electrical Development. He will take the place made vacant by the resignation of E. M. Hunt, who has become connected with the "Review of Reviews."

* * *

National Municipal League will hold its twenty-third annual meeting in Detroit, Mich., November 21-24, with headquarters at Hotel Statler. For information address the secretary, Clinton Rogers Woodruff, 703 North American Building, Philadelphia, Pa.

* * *

John H. Barker, until recently chairman of the fan section of the Associated Manufacturers of Electrical Supplies, has resigned as sales manager of the Diehl Manufacturing Company, with which he has been connected for more than eight years, to go into business for himself as manufacturers' agent in New York City.

The National Hardware Association and the American Hardware Manufacturers' Association hold their annual joint convention at Atlantic City, N. J., October 17-19, with headquarters for both associations at the Marlborough-Blenheim.

* * *

The Columbia Steel and Shafting Company, Pittsburgh, has established a direct branch sales office in New York City at 295 Broadway, in charge of Tracy F. Manville as district manager of sales. Mr. Manville has been identified with the finished steel industry for a number of years and for the past three years has been associated with the company's Eastern sales department at Boston.

* * *

Charles A. Menk, formerly first vice-president of the Association of Iron and Steel Electrical Engineers, was elected president of the Association at the eleventh annual meeting, recently held at Philadelphia. Mr. Menk has been in the employ of the Carnegie Steel Company at Homestead, Pa., for the last twenty-five years, during the last twelve years as superintendent of the electrical department.

* * *

H. E. Hilts, formerly district engineer at San Francisco for the Portland Cement Association, has been elected by the Board of Directors of that body to succeed the late Mr. J. P. Beck as general manager.

Mr. Hilts was born in New York and obtained his technical and engineering education at the University of Pennsylvania. His first work was as rodman with the Mexican International Railroad. Later he was in the employ of the Philadelphia and Western Railroad. For two years he was instructor in the Engineering Department of the University of Pennsylvania, after which he entered the service of the New York Central Railroad, leaving that company to become associated with the Portland Cement Association as road engineer in 1913, for territory comprising the New England and Northeastern States, having been stationed at Albany and Easton, Pennsylvania. In 1915 he was appointed district engineer at San Francisco.

Mr. Hilts is an associate member of the American Society of Civil Engineers, member of American Society for Testing Materials, associate member of the American Railway Engineering Association and member of the American Concrete Institute.

* * *

Three years ago the total amount of money in circulation in the United States was \$3,480,000,000. This year it is \$4,742,000,000, an increase of a little more than 36 per cent.

* * *

According to a decision recently made by Supreme Court Justice Gavegan, of New York, the State Industrial Commission may direct

owners of buildings to make them "panic proof," even if they were previously fireproof. The court said: "The reasonableness of the commission's orders depends directly on the question, 'Is the building safe from the danger of panic?' Panic may result from causes not confined to a factory building itself nor affected by its fireproof character. It may be caused by smoke alone, or by fire in a building adjoining or in the immediate neighborhood, or by a conflagration, or by a hostile attack in time of war from land, sea or air, or by earthquake, or even by a false alarm."

* * *

Sixty-five manufacturers of tile have united in a widespread organization known as the Hollow Building Tile Association, the membership extending from the Atlantic Coast to Texas, and representing 2,200,000 tons of material. In percentage it is about 90 per cent. of the output of building tile.

The manufacturers united in the organization of this association because they realized the very great need for a central body which would do for the industry the things that needed to be done and which could not be done by the individual manufacturer.

The association has established a building code department and has employed Mr. John A. Ferguson, a trained engineer, to take charge of it. He will co-operate with building committees and building inspectors in all cities and States which are revising their codes.

Mr. E. R. Strutevant is secretary of the association, with offices in the Conway Building, Chicago.

* * *

The markets for building materials and supplies are considerably more hopeful than they have been during recent months. Gradually the depressing conditions are being eliminated, and the trades individually and collectively acquiring a more optimistic attitude toward the future. Material prices are rapidly being stabilized and before long this phase of anxiety to the building fraternity should be entirely eliminated.

* * *

The production of materials and supplies has progressed steadily in spite of numerous manufacturing difficulties but as a whole the material market is in a better position than it has been for many months. The elimination of the fuel problem, the improvement to the transportation situation and other factors have all contributed their part in changing the mental attitude of the manufacturers and dealers in structural commodities.

* * *

The labor situation is slowly adjusting itself, and although the normal is still far distant, the building interests are beginning to observe signs or easier conditions in the labor market. The industrial life of the United States has suffered greatly through labor difficulties during the past two years, but they have undoubtedly weathered the worst of the storm, and from now on the improvement should be marked.

At the present writing it is generally understood that architects and engineers of this city have completed plans for a large number of structures, including practically all classifications. These are being held in abeyance primarily for a recession of material prices to a level that would enable their owners to proceed with construction in confidence, that when the operation was completed a reasonable margin of profit could be obtained. For a long time past the prices of structural materials and supplies were so unsettled that builders contemplating improvements were simply forced to wait. Now there is an indication that market conditions are stabilizing, and undoubtedly this will considerably assist in relieving the tense building conditions.

* * *

For a long while, the building industry as a unit, has placed a large part of the responsibility for the recent marked recession of structural activity upon the steel interests.

The high prices of fabricated steel were undoubtedly an important factor in halting construction work, particularly that type of building dependent upon structural steel in any great quantity. Now that both production and price of steel have been brought under control by the proclamation of President Wilson the building industry does not seem to be much better off than it was prior to the announcement. Before conditions radically improve the entire building situation must undergo a complete readjustment to the new conditions that have been imposed upon it by governmental action. It is generally thought that this will require a considerable length of time. Certainly results could not be expected to immediately follow the price fixing announcement. A condition that was the outgrowth of a long list of depressing factors could not possibly be relieved by a spoken word or a signature upon a document, but will require a period of time in proportion to the value of the anticipated relief.

or through his representatives, on all questions arising between the office and the contractors, or between the office and constructing quartermasters stationed at the several cantonments.

The officer in charge selects assistants, each one to follow in detail the work located in the several cantonments as assigned.

Any correspondence originating in any part of the office other than the Construction Division is signed by the officer originating the correspondence, but goes out over the desk of one of these assistant construction officers, so that they can be familiar with all matters under discussion.

In the same way all correspondence coming in from constructing quartermasters, referring to engineering, material, or accounting matters, comes in over the desk of the proper assistant construction officer, to be noted and forwarded to the officer in charge of the department having jurisdiction.

In addition to the assistant construction officer located in this office and mentioned above, there are other assistant construction officers similarly assigned who act as field supervisors and circulate, each in his own territory, practically all the time, reporting to this office after each visit to a job.

Accounting Division.

The officer in charge supervises accounting matters and the general administration of the office.

Under his direction an accountant is chosen who handles the accounts of this office and supervises the work of the accountants stationed at the various cantonments, and also of the auditors. Each of these auditors covers a territory corresponding to the territory covered by one of the assistant construction officers and visits the jobs in his territory often enough to be sure that office routine and accounting matters are being handled satisfactorily.

The officer assigned to duty in this division for legal matters advises with all divisions of the office at any and all times, and every precaution is taken to comply with laws and regulations, with particular reference to matters involving expenditure of funds.

Constructing Quartermaster's Office.

Each Constructing Quartermaster reports to the office through one of the assistant construction officers outlined above. He has an assistant who is a civil engineer, and there is under him whatever force of surveyors, draftsmen, auditors, etc., is needed by particular circumstances.

The Constructing Quartermaster has the responsibility of adapting to the topographical conditions typical plans furnished by the office.

As outlined above, he has the assistance of civilian engineers in the planning of water supply, sewage disposal, etc. The contractor does such engineering work as is necessary to carry out the plans.

The conditions in various cantonments dif-

THE ORGANIZATION OF THE WAR DEPARTMENT FOR CONSTRUCTION WORK

(Furnished by the Government Committee on Public Information.)

Office of the Cantonment Construction Division of the Quartermaster's Department.

All work pertaining to the thirty-two cantonments for housing the National Guard and National Army, also embarkation depots, warehouses, etc., is handled by Colonel Littell through the organization which has just been set up for that purpose, with Captain Marshall as his Adjutant.

In order to carry out the work, the duties and responsibilities of the several divisions are defined as follows:

Engineering Division.

The officer in charge of the Engineering Division prepared the typical plans of cantonments, including water distribution, internal sewer and draining lines, lighting distribution, trucks, roads, etc. He secured, with Colonel Littell's approval in each case, the services of consulting engineers to do all the engineering involved in water supply and sewage disposal, as this is work which must be done in the field.

Designs prepared for such works are submitted, through Colonel Littell, to the consulting engineers of the Committee on Emergency Construction for approval or comment.

He determines and defines the requirements in the way of laundries, incinerators, refrigerating plants, and informs the Material Officer of the requirements, including any other information that he gets incidental to these investigations, and he and the Material Officer together discuss and recommend to Colonel Littell where these contracts and other similar contracts should be placed, the details of the purchasing being in the hands of the Material Officer.

Material Division.

The officer in charge of the Material Division makes recommendations as to placing all contracts for material to be purchased by this organization. He consults freely with the Engineering Office and with Colonel Littell in connection with the purchase of such equipment as power plants, pumping machinery, refrigerating plants, and similar items, and with the Constructing Officer on building materials and supplies.

He keeps in touch with the various supply committees of the National Munitions Board and works out with those committees the best method of handling supplies of material which they may control.

He also has charge of the inspection and expediting of materials and equipment, excepting such part of this work as may be turned over to the several contractors, and even in these cases is ready at all times to help the contractors in any way possible to secure the necessary materials.

The details of transportation from points of manufacture to the several cantonments are handled by the several contractors, but transportation requirements are worked out in advance and arrangements made with the railroad association and with the Transportation Committee of the Munitions Board so that cars are available and transportation expedited in every way possible.

Construction Division.

The officer in charge of the Construction Division is in charge of all operations in the field and handles the correspondence, directly

fer, and matters of this kind are left largely to the judgment of the Constructing Quartermaster to be decided for each cantonment on its own merits, after consulting with the office.

The theory of the field organization is to use the contractors' organization as far as possible for the field work required and for any engineering details.

The chief accountant is responsible for the administration of the job office of accounting, for all expenditures of the contracting officer direct, and for verifying and auditing the expenditures of the contractor, and payments to the contractor by the Constructing Quartermasters are made practically on the certificate of the chief accountant.

The office issues instructions for the chief accountant, who is a part of the Constructing Quartermaster's organization.

The number of clerks, stenographers and inspectors varies, of course, at the different jobs, depending on local conditions.

Assignments.

The following assignments in charge of divisions have been made:

Material Division, Major R. E. Hamilton.
Engineering Division, Major F. M. Gunby.
Construction Division, Major M. J. Whitson.
Accounting Division, Major W. A. Dempsey.

Office of the Signal Corps

Construction Division

Chief, Construction Division: Captain C. Goodloe Edgar, S. C. U. S. R.

Administration Division.

The duties of the Construction Division of the Signal Corps cover all activities relating to the design and construction of signal corps and aviation buildings, and maintenance and repair of all buildings, both temporary and permanent. It has charge of the railroad transportation of supplies, material and personnel of the corps.

The work of the division, under the direction of its chief, is divided into departments, each in charge of an officer detailed from the Signal Corps, with the single exception of the Engineering Division which is in charge of an officer detailed from the corps of engineers, U. S. Army, and the real estate division in charge of a trained real estate operator on a civil status.

(a) Administration.—This division has general supervision of all correspondence, organization, office methods, annual estimates, and co-ordination of division work, etc., and is in charge of an assistant chief, or acting chief in his absence.

(b) Transportation.—This division has charge of the movement of all supplies, material, and personnel of the corps.

(c) Records and Audits.—This division operates two sub-divisions, one having charge of records and audits at its offices in Washington, two in charge of records and audits in the field.

(d) Engineering.—This division operates through two sub-divisions. One is located in Washington in general charge of engineering

problems; plans, specifications, prices, and inspections. It arranges for the purchase of material and supplies for building operations. The second superintends building operations and engineering problems in the field, inspects material as delivered, and adjusts wages and labor disputes.

(e) Real Estate.—This division has charge of the inspection of proposed aviation training fields, the inspection of other proposed sites for signal corps buildings, preparing and renewal of leases, examination of titles, and it is charged with notification to the Finance Division of dates of payments on leases in advance of their maturity.

(f) General.—An advisory architect has been retained who furnishes the division with plans and specifications for the buildings used for aviation, both temporary and permanent, and whose opinion is secured on all material and supplies.

The work of the division, as will be seen from the above, is divided into work in Washington and work in the field. At each building operation an officer in charge is furnished by the Engineering Department with assistants who are trained by means of daily meetings at the work to complete familiarity with standard plans, specifications, and design of buildings for the Signal Corps. A chief auditor and sufficient assistants are furnished at each building operation to supervise the books of the contractor, to check pay rolls and material bills, to prepare for him the vouchers and papers necessary to be furnished to the Finance Division in Washington before payments can be made. In addition, inspections are regularly made by officers from the headquarters of the division in Washington during the course of the work.

THIS IS A BIG JOB.

"The North Carolina Pine Emergency Bureau, organized at the suggestion of the Council of National Defense, has completed the placing of orders for 6,800 carloads of lumber to be used in the construction of cantonments for the national army," said A. Mason Cooke, chairman of the bureau, at Washington. "Nearly all of this large quantity of North Carolina pine has already been shipped from mills in the States of Virginia, North and South Carolina, and has been used in the building of barracks and other quarters at Petersburg, Va.; Columbia, S. C.; Charlotte, N. C.; Admiral, Md.; Yaphank, N. Y.; Mineola, N. Y.; Gettysburg, Pa.; Syracuse, N. Y.; Ayer, Mass., and several other places 'somewhere' in the Eastern States."

Reports to the Lumber Committee of the Council of National Defense show that nearly 30,000 cars of lumber have been shipped to the 16 cantonment sites and other points of Government construction, and that during the two months ending the 1st of September there were constructed over 24,000 buildings for housing the new army for training subsequent to going to France. About 100,000 men have been employed on these construction jobs, which in itself is the greatest industrial

army ever recruited in the western hemisphere, and ample proof that democracy can equip itself for victory.

MILLIONS FOR JERSEY DEVELOPMENT.

Important Governmental projects are contemplated on the meadows at Newark, N. J., and along the Raritan River. On the Newark meadows the United States Government, represented by the Commanding General of the Eastern Department, Governor's Island, N. Y., and Colonel I. W. Littell, Adams Building, Washington, D. C., is having plans prepared by Major Wheaton, advisory architect, and Major Gunby, advisory engineer, Adams Building, Washington, for a group of storehouse, warehouse and terminal buildings, to cost approximately \$10,000,000. The structures will be of frame, stone and concrete construction. The project also involves the erection of docks and bulkheads, and railroad work. The Government also plans the creation of terminal facilities to cost about \$5,000,000, along the Raritan River. Plans will be prepared privately for Brigadier General W. C. Crozier, Chief of the Ordnance Department, State, War and Navy Building, Washington, D. C.

Philadelphia is one of the busiest building centers in the United States and "The Guide" is the only medium that touches this golden field.

For every "one" man you can mention who has succeeded without advertising we'll agree to name ten whose greater success has been due to advertising "direct." Moral Advertiser!

REAL GOLD UNMINED.

"I am here as the self-appointed representative of 900 trade and technical publications printed in the United States and circulated wherever the English language is spoken. How important they are in their relation to advertising may be understood when I tell you that they carry, in the aggregate, advertising to the amount of at least \$25,000,000 a year—one-eighth of all the advertising money that is spent for all forms of publicity in the country—and that these advertisers 'stick' year after year because it pays them to stick.

I have bought, sold and written all kinds of advertising—pasted and printed, indoor and outdoor, consumer and dealer, technical and commercial—and I have reached the conclusion that there is more real gold as yet unmined in the trade press field than in any other field of advertising endeavor."—Extract from address by R. R. Shuman, before the annual convention of the Associated Advertising Clubs at Omaha.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING; CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Elevator Shaft, Twelfth and Locust streets, Philadelphia. Architect, Robt. Rhodes McGoodwin, 1422 Walnut street, Philadelphia. Owners, S. S. White Dental Manufacturing Co., Twelfth and Chestnut streets. Brick, 8 stories, 8x6 feet, metal lath, hollow metal skylights, fire doors, roof ventilators (elevators reserved). Architect taking revised bids, due as soon as possible. Turner Concrete Steel Co., 1713 Sansom street, and Drehmann Paving Co., 2622 Parrish street, are figuring.

Recreation Pier, No. 57, Penn Treaty Park, Philadelphia. Architect, private plans. Owners, City of Philadelphia, Department of Wharves, Docks and Ferries, George S. Webster, Director, 550 Bourse Building, Philadelphia. Reinforced concrete, steel, timber and wood pilings, double deck, 70x295 feet, bulk head A. P. M. and concrete roof, asphalt paving, cement and pine floors, rolled steel sash, kalamein and steel rolling doors, ornamental iron work, metal lath, safety treads, waterproofing, wire work. Revised plans in progress. Owners will advertise for new bids shortly.

Manufacturing Building (alts.), 846 North Eighth street, Philadelphia. Architect, J. Ethan Fieldstein, Hale Building, Philadelphia. Owner's name withheld. Brick, 3 stories, 50x100 feet, elevator, fire tower. Preliminary plans in progress.

Factory (alt.), southwest corner of Eighth and Noble streets, Philadelphia. Architect, Mahlon H. Dickinson, Bellevue Court Building, Philadelphia. Owners, Thomas Cusack Co., 213 South Tenth street, Philadelphia. Brick, 1, 2 and 3 stories, 80x195 feet, cement and wood floors, steam heating, electric lighting, office partitions. Architect taking bids, due October 19th at noon. Freund Const. Co., Bulletin Building; Wark-Yardley Co., 1737 Filbert street; A. L. Pretz & Son, Heed Building; W. W. Anstine & Co., 1218 Filbert street, and John H. Ott, Real Estate Trust Building, are figuring.

Residence (alt. and add.), 1728 South Broad street, Philadelphia. \$7,500. Architects, Milligan & Pierson, 520 Walnut street, Philadelphia. Owners, Augustine Social and Beneficial Society, care of architects. Brick, rear addition, 2 stories, 20x21 feet, side addition, 2 stories, 32x8 feet, slag roof, electric lighting, hardwood floors, slate work, dumb waiters, bar fixtures, hollow metal skylights (plumbing and hot water heating reserved). Plans in progress. Architects will be ready for bids in a week.

Garage, Office and Stores (2) (alt. and add.), Twenty-sixth and Somerset streets, Philadelphia. Architect, R. H. Pepper, 1808 North Seventh street, Philadelphia. Owner's name withheld. Consists of remodeling present building, brick, new wall, 1 story, 101x56 feet, roof ventilators, flush bulks, electric lighting, pine floors, metal ceilings, plumbing, cement work, gasoline storage system. Architect taking

It's the Long Fire Travel in the Burnham Cosy Comfort Boiler That Makes the Short Coal Bill

IF you can keep the hot gases and smoke travelling back and forth inside a boiler long enough to extract the bulk of their heat, and still not make the draft sluggish; it's plain enough that less heat will go up chimney and more heat go into your radiators.

That back and forth action is what we call fire travel. It's this long fire travel in the BURNHAM Cosy Comfort Boilers that has a lot to do with making their short coal bills.

CONVENIENCES IN POPULAR DEMAND

Prospective tenants and buyers want to know how they are going to keep warm in the chilly mornings and evenings of the early Fall and late Spring, when it isn't practical to have the furnace going.

If you can point to a Baseboard Gas Outlet in each room to which Gas Heating Stoves can be readily connected your Prospect is then assured of a quick, clean and economical method of getting the desired auxiliary heat.

Advertiser! The minute you stop advertising you lose ground. You may not feel this loss right away. But you must feel it in the end. Advertising is the dynamo of modern business.

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

BE A "TRADE-MARKED" BUILDER

Why not be a "trade marked" contractor? There are—it is sad to relate—contractors to-day who are in the same position that a lot of manufacturers still occupy—doing business on a price basis only. But a trade mark means a reputation to sustain. It means a distinctiveness, an added touch, making the finished product "a little better than seems necessary."

If your name is Miller, make a feature of "Miller houses," or "Millerbuilt houses," or by some other easily remembered phrase impress upon the people of your territory that the houses you build have behind them a reliable individual, with a reputation to uphold, a record of worthy construction.

A trade mark means that you are not ashamed to have prospective clients go and see the work you have done for other people. The man who is making an article merely to sell, without regard to its value, never puts his name on it. Such a man puts up a house, gets his money before the "just as good" paint has commenced to scale and fade, and departs in such a way that the postmaster stamps his mail "Address unknown" and sends it to the dead letter office.

A "trade marked" contractor is entitled to a better price for his work, for he is doing better work, and he must keep the quality up or his advertising will not ring true and he will lose out entirely. A "trade marked" contractor will use materials that the average owner has heard about and is acquainted with. He will often get better prices than the contractor without a trade mark, because he has the reputation and the credit of being a bigger man and doing bigger things.

The "trade marked" contractor, by getting a better price for his work, can often put in some extras that will add to the comfort of the owner, making a friend and perhaps helping to get other jobs from the owner's friends.

The "trade marked" contractor should be, in his own home town, just as important a man as a banker and as big as any dealer. The better he advertises, without being boastful, the better he becomes known, and eventually the finest building jobs of the town will be his without half the effort that an irresponsible contractor will have to go through with.—"National Builder."

A NOVEL BUILDING SCHEME.

The Canton, Ohio, Chamber of Commerce "Build a Home" campaign has reached out of the city in an effort to secure home building information in other cities. Herbert H. Dow, millionaire chemical manufacturer, of Midland, Mich., a former Canton business man, has submitted a plan by which his company dealt with a situation similar to that now facing Canton.

Dow stated that his company had purchased a large tract of land, secured the service of an expert to lay it out, and also a welfare

man whose duties were to see that every family represented in his employ was properly housed and that no homes built by the company were sold to undesirable persons.

Houses costing from \$675, plus the price of the lot, to \$2,500 each, were erected and sold. On the low cost houses a cash payment of only 5 per cent. was required and a larger percentage on the higher priced homes. Monthly payments of \$10 in addition to taxes and interest at 6 per cent. were added.

As soon as sufficient money had been paid on a house so that a bank would undertake the loan, the Dow Chemical company closed its relations with the buyer and permitted the property owner to issue a mortgage and deal directly with the bank.

In this way a large tract of what was presumed to be swampy and unavailable land at Midland was properly drained and made into a building site for many homes and the home building and housing problem for the employees of this company was solved.

SKILL AND PATRIOTISM OF BOSTON BUILDERS LAUDABLE.

In these times of crucial tests of men's souls and patriotism, with delays in Congress, and

We Drill Wells and Get Water Test Borings and Soundings

LET US SUBMIT PRICES

RIDPATH & POTTER CO

587 Bourse Building
Philadelphia, Penna.

price fixing, and strikes, it is refreshing to know there are some splendid examples of heroic manhood that deserves a wreath in the Hall of Fame for loyalty. Beyond any doubt the nine thousand workmen who constructed Camp Devens at Ayer, Massachusetts, under the contract awarded Fred T. Lay & Co., Inc., of Boston, are entitled to all this and more, because they have completed this work for the United States Government ahead of time, and at a time when men were hard to get because of the large number enlisting in the army or navy.

To thoroughly appreciate these statements the reader must be informed there are 746 buildings that were finished in sixty days, or an average of one building every forty minutes for each working day in two months. Which means the delivery and handling of thirty million feet of lumber; unloading fifty carloads of materials daily; building a complete water supply system with twenty miles of pipe, and building a complete system of sewerage with twenty miles of pipe.

These buildings included a 1,000-bed hospital unit costing \$500,000, refrigerating plants, storehouses, bakeries and miscellaneous buildings, in addition to the quarters for soldiers involving an outlay of \$6,000,000.

HADDON HALL

Covered With

Merchant's Metal "SPANISH" Tiles

This popular seaside hostelry with its artistic red tiled roof has for years been a well known Atlantic City landmark.

The selection of Merchant's Metal "SPANISH" Tiles for roofing purposes has not only given it a distinctive appearance but has been the means of protection from the ever present fire hazard in that city of frame buildings.

Merchant's Metal Tiles and Shingles are
manufactured from galvanized steel, gal-
vanized iron and sheet copper.

Ready! Fire

—all the work you want at the "LITTLE GENERAL" MATERIAL ELEVATOR HOIST and it will handle it satisfactorily.

One man to load the elevator, one man to distribute the barrows and one man at the hoist will keep fifteen bricklayers hustling.

"LITTLE GENERALS" are used by dozens of bricklayers in Philadelphia, who used to rely on the hod carrier method, which was expensive and slow. Now they use a "LITTLE GENERAL" and save money.

Elevator operates in an opening 26" x 60". Easy to erect, easy to take down and move, convenient to store.

As The Editor Sees It

OPERATIVE building has renewed its activity to some extent in New York City, in various cities of the Middle West and throughout the Southern States. While conditions in the local field are still dull, and from present standards are likely to continue far from encouraging, there is a stirring, here and there, of new projects. There is no doubt whatsoever that the demand real estate men report for new houses exceeds anything of the kind ever known in the history of the trade. In many sections of Philadelphia it is not possible to buy with the usual range as to choice. The best real estate men are able to offer prospective purchasers—and these are insistent and numerous,—are isolated units for the most part held at a prohibitive premium over normal levels of value. Renting opportunities, in the modern dwelling line, have practically ceased to exist. Brokers report waiting lists of desirable tenants by the score whose wants they are utterly unable to supply.

One of the immediate results of this scarcity of new dwellings is a sharp and apparently progressive advance in renting and sale figures. Properties that lagged a few years back at \$3,500 are selling to-day with ease at from \$4,000 to \$4,200. The type of house that could be had a year or two back at \$4,000 sells readily to-day at \$4,500 to \$4,800. Rents have jumped in the newer and more attractive sections from an average level of a few years back of \$25 to an

average level of \$30 to \$35. The opportunity that exists for operative work in the \$4,000 to \$4,500 class of house surpasses anything the oldest builders in the trade are able to recall. It seems a pity that with a market waiting, a demand actually pounding for relief, the disposition should still assert itself to hang back and await developments. That the expected developments—a considerable drop in material prices with better conditions as to deliveries and labor—are not even a remote possibility seems now to be the settled conviction of men with knowledge of the general outlook.

* * *

IT is pointed out by men who have given study to contemporary conditions that should the war abroad come to a stop to-morrow there would be presented no sound argument upon which to base a hope that the price of materials and labor would undergo any considerable recession inside of three years. The local demands, an accumulative condition due to the stoppage of operative and investment activity over the past two years with the demand which is certain to deluge this country from the desolated district abroad make it reasonably certain that for years in the wake of the war itself there will be no marked recession in material or other structural costs. In New York City, where the builders have been for some weeks busy with an inquiry into the causes, real and imaginary, of the depression which has overtaken certain

lines of building, there is observable a renewed confidence which is finding expression in the breaking-ground on projects long held in abeyance. It is sincerely to be hoped that something of this spirit may communicate itself to local operators. The one factor necessary, at this time, to a complete restoration of confidence is a return to at least sporadic activity. Success is contagious. We feel absolutely confident that with the assistance of a few intrepid spirits the local operative field would find its way back to normal in no time.

* * *

READERS OF THE GUIDE will, I am sure, recall the strong, sane, helpful and informative articles dealing with various phases of the building game that have appeared in these pages from time to time from the pen of Mr. Theodore Starrett. These articles were written for *Architecture and Building*, a New York magazine of which Mr. Starrett has, for some years, been a contributing editor. Those of you who recall the articles will be as shocked, perhaps, as I am to learn of the sudden death of Mr. Starrett at his home in Prospect Plains, N. J. Mr. Starrett did not write the high-brow order of copy, he called a spade a spade and couched his opinions in blunt, everyday English, but he knew the building game as no other writer in American trade journalism ever pretended to know it and he wrote of it with a sureness of his subject that made his articles

as authoritative as to fact as they were readable and entertaining. A brief sketch of Mr. Starrett, for which I acknowledge my indebtedness to the *New York Record and Guide*, appears on another page. In the demise of Theodore Starrett the building industry of his country loses one of its bright and commanding minds, a master builder in the finest sense of the term and a citizen worthy of the high place he occupied in American affairs.

THE annual meeting of Philadelphia Chapter of the American Institute of Architects was held at the Meridian Club. The balloting for officers resulted in the selection of the following: J. P. S. Sinkler, president; Evelyn L. Stewardson, first vice-president; Horace Wells Sellers, second vice-president; Edward A. Crane, secretary; George I. Lovatt, treasurer, and H. Bartol, register, recorder and librarian. The election was followed by an informal luncheon.

Charles L. Borie has been designated chairman of a committee of ten to interest local architects in subscriptions to the second Liberty Loan. The architectural profession is, naturally, ambitious to make a creditable showing and will welcome the fullest co-operation on the part of local practitioners with the work of the committee.

UNDER the head "Build While We Fight," the *New York Record and Guide*, prints the following very timely and pertinent editorial:

"Since the entry of the United States into the conflict for 'World Democracy' there has been a growing attitude of hesitancy on the part of the building interests to postpone active construction until the conclusion of hostilities. A strong feeling has been generated and fostered that so long as the nation is engaged in warfare, other industrial activities, except those actually essential to the prosecution of the conflict be side-tracked, in a determined effort to bring the war to a speedy victory. The result is exactly what every patriotic citizen is interested in, but the means to the end, as planned by the exponents of a cessation of building endeavor until the war is ended, is, we think, open to impeachment.

"There is no legitimate reason why structural activities should be abruptly stopped for the period of the war. In fact, there are countless reasons why construction work should be speeded up to the ultimate of efficiency. This is true particularly at this moment when the future of the nation looms up so favorably in world commerce and politics.

"In order to keep abreast with the head of the procession in the march of world events it has become the bounden duty of the United States to add con-

siderably to its constructive efforts, both at home and abroad. National, we should be able to build as well as to fight. Both should be accomplished to simultaneously. The greatest opportunity of all time is unfolding to us as a world power, and we must not be lacking in conception or ambition to make the most of the present and prospective advantages.

TO this end let public and private building proceed in volume at least as great if not greater than before the entry into the war. The production and handling of structural commodities and building and engineering construction work of all descriptions are notably among the foremost of our national industries. Any tendency to halt or postpone building activities at the present time is plainly inconsistent with maintaining that prosperity that is our national birthright. Investors, speculative builders, architects and all other branches of the building fraternity should by no means permit of stagnation to an industry so important to their life, but should undoubtedly proceed with their contemplated structural improvements, and, by virtue of the exist-

ing demand in all sections of the country for additional structures, redouble their efforts to revive building activities. Commonwealths, municipalities, public utilities and private interests generally should inject life into the projects that have been held in abeyance since the outbreak of hostilities.

THE brick, cement, lime, lumber, structural steel and other building material industries are basic. Neither Federal regulation nor railroad or other transportation restrictions should be permitted to interfere with them. The progress and stability of these basic industries means protection to our entire national economic fabric, as all economic progress is dependent upon industrial and commercial expansion. As these phases of national prosperity are manifestly impossible without facilities for increasing the growth of the dependent interests, building operations must of necessity be allowed to proceed naturally and without obstruction. Without this effort, the result will possibly be a serious embarrassment to the United States in financing and prosecuting the war to a speedy and victorious conclusion."

EDITORIAL NOTES

Recently there has been noticeable a marked improvement in the speculative building situation. There are a number of projects of this character on the boards in the offices of prominent architects and some new operations have already been started. The intense demand for living accommodations that exists in practically all sections, coupled with an easier material market and generally improved building conditions, has undoubtedly influenced investors and speculative builders to return to life many of the projects that have been in abeyance since the outbreak of the war and prepare the preliminary plans for entirely new improvements.

The total production of petroleum in the United States in 1916, according to a report by the United States Geological Survey, amounted to 300,767,158 barrels of 42 gallons each, or approximately 65 per cent. of the world's production. Next in oil production was Russia, with 72,801,110 barrels, and Mexico was third, with 39,817,402 barrels.

Conditions in the building material markets are daily becoming more settled and this will have considerable to do with an increase in the volume of building work undertaken during the winter months. Practically all commodities are more stable than they have been for a period of months. Important fluctuations in prices during the past week were negligible and the building trade is working

around to a feeling of greater safety from the market situation. The dearth of new structural projects has undoubtedly had considerable influence on the material markets and the lack of demand is plainly reflected in the stabilized prices.

The American Civic Association will hold its thirteenth annual convention at St. Louis, Mo., on October 22-24. City planning and city development will be among the subjects considered, and there is to be a discussion on the subject of the best means of carrying on civic improvement work while the country is at war. The secretary of the association is R. B. Watrous, 914 Union Trust Building, St. Louis, Mo.

Hermann H. Klinsmann has been appointed as the Minneapolis, Minn., agent of the Bicalky Fan Co., Buffalo, N. Y., and will in the future take care of the interests of the Bicalky roof fan ventilators in that city and the surrounding territory.

H. J. Richardson, recently with the New England Westinghouse Co. as manager of its gauge department, has been appointed works engineer for the Berger Manufacturing Co. His work includes the power plant, new construction and maintenance and repair of manufacturing equipment and buildings.

Architects of Springfield, O., have announced

ed that they favor the adoption of a building code for the city which will prevent a recurrence of such accidents as that at the Columbia Theatre, when four lives were lost and eight others were injured. The general opinion among the architects is that care should be used in adopting the provisions in the code and that it should be so written as to conform to the conditions peculiar to this city. They say that the benefits of such an ordinance will be many, that it will provide a greater margin of safety and stimulate the building trade because of the rigid adherence to the best building practice, a closer supervision of plans and better inspection of jobs in course of construction. Contractors also favor its adoption, saying that it will benefit their business as well as operate to the advantage of persons planning new structures.

Electrical Supply Jobbers' Association will hold its semi-annual meeting at the Hotel Sinton, Cincinnati, O., November 13-15.

From November 28 to December 8, 1917, the Klingman Exhibition Building in Grand Rapids will be the scene of high class exposition, known as the First Annual Grand Rapids National Better Homes Show, presented under the auspices of the Grand Rapids Association of Commerce, the Greater Grand Rapids Association, the Grand Rapids Art Association and a score of other leading civic, industrial and social organizations. The special features of an educational nature will include the Art Extension Course of the Chicago Art Institute, Mr. Ross Crane in charge. It is also expected that Dr. C. L. Haney, of the New York Art Institute; Mr. C. R. Clifford, eminent in decorative circles; Mr. Henry W. Frohne, editor of "Good Furniture;" Mr. William A. Boring, Professor of Architecture of Columbia College, and other national experts and leaders in Better Homes movements will talk during the exposition.

American Iron and Steel Institute will hold its autumn meeting at the Hotel Sinton, Cincinnati, October 26 and 27.

The Engineer Company, New York City, is now the sole builder of the Turner Baffle Wall. The B. W. R. Company, which formerly handled this wall, has retired from business and its president, J. W. Putnam, has become manager of the Baffle Wall department of the Engineer Company, and the entire plant and organization of the B. W. R. Company has been taken by the Engineer Company.

The New Jersey Board of Boiler Rules, at a meeting held in Newark some time ago, adopted the A. S. M. E. Boiler Code for new installations of power boiler and heating boilers, to go into effect November 1, 1917. Provision is to be made by the board for special consideration of boiler contracts and constructions entered upon before that date. The board has held a number of public hearings, and at its next meeting is expected to take

final action in the adoption of a code for regulation of existing boiler installations.

National Machine Tool Builders' Association will hold its sixteenth annual convention at the Hotel Astor, New York City, on Tuesday and Wednesday, October 30 and 31.

Crane Packing Company of Chicago, manufacturers of the "John Crane" flexible metallic packing for all vapors and liquids, announces the establishment of their Eastern office in the Woolworth Building, New York City. Their engineer, A. W. Payne, has been placed in charge of this branch.

C. D. Cooley Company, architect, has moved from 37 East Twenty-eighth street, to 41 Park Row, New York City.

Kielely, Mueller Company, New York City, announces the appointment of F. J. Miller to their selling force. Mr. Miller has for many years been engaged in selling steam specialties and is well known in power plant circles.

Hopkins & McEntee, architects, have moved their offices from 37 East Twenty-eighth street, to 41 Park Row, New York City.

Climax Smoke Preventor Company, of Boston, Mass., announces through B. L. Ames, general manager, the taking over of the business and management of the Monarch Blower Company, Troy, N. Y. Improved facilities for the manufacture of Monarch blowers are being perfected and a large addition is being made to the Climax selling force.

To fill vacancies about to occur by reason of the expiration of the terms of seven members of its Board of Directors and two unexpired terms the Builders' Exchange of Philadelphia, at a meeting last week nominated the following: Joseph M. Steele, Pringle Borthwick, A. L. Carhart, John R. Wiggins, H. H. Burrell, J. W. Cowperthwait, John Sinn, Harold Smith, John F. T. Lewis, Harry Boon, W. F. McCarthy, Charles Fowier, R. F. Black, C. A. Kuehule, S. F. Reeves, C. S. French, P. S. Smith, F. M. Harris, Jr., A. G. Berwinger, James Pierce, W. F. Sullivan, Charles B. Kates, John C. Humphreys, C. Belfi, C. R. Watson, Louis S. DeLone, H. B. Auchy, Joseph E. Houseworth, and William Turner. The election will take place on the third Tuesday of November.

J. H. Purdy, of New York City, was re-elected president of the Pennsylvania Water Works Association for his third term at the opening of the 22nd annual convention at Atlantic City. Other officers are: First vice-president, J. B. Horn, of Vandergrift; second vice president, Harry Bolton, of Houtzdale; third vice-president, H. E. Ahrens, of Reading; secretary and treasurer, F. S. Purviance, of Pittsburgh; executive committee, W. C. Hawley, of Wilkesburg; C. Q. McWilliams, of Shamokin; W. J. Yeager, of Lewistown;

L. E. Smith, of Greensburg, and P. A. Small, of York.

In an order dismissing the suit attacking the contract for the Free Public Library building on the Parkway at Nineteenth street, Judge Audenried sustained ordinances of Councils, passed in 1894 and 1895, providing that all stone used in public buildings must be cut within the city limits. The suit was directed against Mayor Smith, Director Datesman, Councils, the trustees of the library and the contracting firm of Gill & Sons, who were the successful bidders for the work. The amount of the contract was \$2,535,000. In this suit it was alleged that the provisions of the ordinance with reference to cutting all stone used in the construction of public buildings within the city limits were in violation of the interstate laws and are against the Constitution.

It was further pointed out that the limestone and granite required for the new building could not be obtained in Philadelphia, and, therefore, would have to be shipped in the rough at an additional expense. It was stated in the bill of equity that the George A. Fuller Company was also a bidder for the work, and that this firm estimated on the stone cut in and outside of the city. Their bid was \$120,000 less than the price at which the contract was awarded to Gill & Sons. It was also declared that a number of outside firms were ready to bid and make the city an allowance, provided it were legally permissible to cut the stone without regard to the provisions of the two ordinances referred to. Judge Audenried, however, finds that the ordinances are valid and that the award of the contract to Gill & Sons must stand.

The building of public schools in this city by the Board of Education is at a standstill, save for three annexes, notwithstanding the number of pupils increases steadily and 20,000 pupils are on part time. One reason given for stopping building operations is the high cost of materials. It has been necessary for the Board to close ten of the elementary shops. The reason for closing is the lack of teachers, many of those who had charge of these classes having enlisted for military service. It is impossible to get substitute teachers for these schools, according to Secretary Dick, because of the fact that substitutes are paid only \$2 a day, and carpenters will not work for this sum.

It isn't enough to just advertise. There is competition these days in advertising, as in other things. You must make your advertising attractive. You must make it say something,—something definite, original and convincing. If you lack faith in your own ability to do this, let us do it for you. Give us the facts. Talk to us just as you would to a prospective buyer. That is the kind of talk that makes profitable advertising. We'll look after the verbal frills. That's our business.

HARDWARE MEN IN CONVENTION

American Hardware Manufacturers' Association in Convention at the Marlborough-Blenheim, at Atlantic City, Consider Topics of Trade Importance—Opposition Registered to Government Price-Fixing—Scarcity of Labor Presages Higher Prices in All Lines.

Warning was given to the hardware industry by President Fayette R. Plumb, of Philadelphia, in addressing the opening session of the American Hardware Manufacturers' Association convention at the Marlborough-Blenheim, at Atlantic City, that prices are going up all along the line, especially the cost of labor, as the war goes on, and that shortly it will be a matter of extreme difficulty to obtain raw materials. His message is likewise of special significance to the general public, which may look for a corresponding increase in the cost of its hardware necessities.

"We all know enough about conditions to realize that the situation is going to grow steadily worse," he declared. "The appropriations already made by Congress are to provide for another million men under arms by next June. It is proposed to raise the army to over four million as fast as the men can be supplied and trained. This will mean not only the men withdrawn from each factory, but the competition for labor to replace these men will arise. This shortage of labor will advance the price of labor, and this effect will be heightened by the advancing cost of living. Don't let any of us fool ourselves by thinking because the cost of labor is very high now that our employees are satisfied, that the top has been reached. It has not and will not as long as the war lasts."

Mr. Plumb declared that despite the voluntary fixing of the price of steel bars at \$2.90, they are as scarce at this price as \$2.00 coal. Before many months it will be impossible to secure steel for any purpose except war requirements, he stated, and it won't be a question of the price of steel or the price of hardware, but simply a question as to how the small amount can be distributed to the best advantage.

About 1,200 delegates from all sections of the country, representing the manufacturing and the wholesale parts of the hardware industry were in attendance at the convention, and they gave a unanimous pledge of support and co-operation to the Government. The committee on governmental activities, headed by C. W. Asbury, of Philadelphia, urged the appointment of a special war service committee of men thoroughly representative of the hardware industry who will give themselves, their talents and their knowledge to the single purpose of helpfulness to the Government. The committee is to form a point of contact between the Government and the hardware industry in the United States.

A plea for the cash discount premium was made by T. James T. Fernley, of Philadel-

phia, secretary-treasurer of the wholesalers' association, who declared that despite the agitation against it, the 2 per cent. for cash in ten days policy is rapidly becoming general. He also reported that trade acceptances are coming into more general use, and that the fear they would do away with cash payments is disappearing.

Under the influence of the economy campaign that is sweeping the country, there is apparent a noticeable reduction in the variety of hardware manufactured, Mr. Fernley stated. No products but those absolutely essential to the requirements of the consumer and the Government should be manufactured, he stated. Mr. Fernley also set forth the usefulness of the wholesaler as a middleman in the hardware industry by stating that when goods became scarce by virtue of the war's demands and the retailers had failed to anticipate the shortage, the wholesaler showed that without his foresight the public would have been unable to obtain his actual requirements.

Objection to Government regulation of prices was registered when the Hardware men refused to endorse the proposal of the United States Chamber of Commerce War Convention held at Atlantic City a month ago. The hardware industry is different from any other, it was maintained, in that its products run into the thousands. It was impossible to put it on the same plane with the steel, coal or meat industry.

Fear of a charge of lack of patriotism restrained the manufacturers for some little time, but after a strenuous debate the formal action was unanimously taken. The first vote was on the question of additional legislation to create authority to control prices during the war, and it was emphatically negative. The second was on the proposal for authority for control of prices to extend to all articles of importance in basic industry as well as in war, and which enter into the necessities of every-day life. This also was negated, the position being taken that the President already has such power.

Two other proposals in the group proposed the establishment of price control on raw material and finished products, and control of prices to the public as well as to the Government. Again the negative vote was registered, and, as was the case with the first proposition, the whole principle of control was objected to when the convention voted against the establishment of a small board to fix prices, which should be appointed by the President.

This action by the hardware manufacturers is said to be the first withdrawal from the advanced step taken by big business when it came out at the war convention recently in favor of full Federal control of all prices. Earlier in the day the creation of a Federal Industrial Reserve through Congressional enactment, which would have the same full and general powers provided in the selective draft

system for the army, to conscript men exempted from military service for service in the industrial work of the nation, was advocated.

The resolution urging this action upon Congress set forth that increased production to keep the military forces of the country supplied with the requirements of war, as well as to provide for home needs, was second only to the need for an army which the conscription provided for. The handling of the industrial reserve would be placed in the hands of a Federal employment commission. Voluntary enlistment in the industrial reserve would be permitted, but such volunteers should not be exempted from military call if they were of military availability. The whole principle underlying the plan is to organize industry as effectively as the military forces are organized, and the resolution emphasized the place that women must take in industry. Copies of the resolution were forwarded to President Wilson, the members of the Cabinet and to both houses of Congress.

The committee which offered the resolution admitted that organized labor is now strenuously opposed to such legislation, but declared that the weight of influence of representative business throughout the country should and could be brought to bear upon Congress at its convention in December to secure it. The measure would place labor as completely under government control as are the men in the army, it was stated. One manufacturer declared that "what we need is more labor leaders and fewer labor agitators."

The announcement that the industry in Pittsburgh was successful with the "open shop," made prior to the presentation of the resolution urging governing control of labor, drew from the convention a demonstrative expression of enthusiasm. The convention was to hear Dr. Joseph H. Willis of the University of Pennsylvania speak on labor problems and how to replace men drafted into the army, but he was unable to leave his duties with the Federal aviation department, and his paper was read by Dr. W. W. Williams of the Wharton School. Because of the confidential information from the English commission which it contained, it was impounded. It had to do especially with the part the women are playing in British industry, especially in munitions plants, and where unskilled labor is employed. Dr. Williams stated that the labor problem is more difficult here because the organization of labor is more complete in this country.

"As I see it, the one element falling down on the job at this time is labor," C. W. Asbury, of Philadelphia, declared. "I am not referring to organized labor, but to all labor. There is a general disposition to loaf apparent. There is current in Washington an inclination to create a labor industrial board. If we want to include all slackers we must go to the Waldorf-Astoria, the Bellevue-Stratford and the Ritz, and get them all. I am referring to that class as much as I am to the working man."

The manufacturers were visited by a delegation from the jobbers, who are also in con-

vention. The matter of more general use of the two per cent. cash discount privilege was

urged upon the manufacturers, but no action was taken on the question.

labor, which is denied him here, is terminated, crowned with his reward—although too soon removed from the bosom of his friends."

MR. THEODORE STARRETT, NATIONAL FIGURE IN BUILDING FIELD, DIES

Founder of the Thompson-Starrett Company, Nationally Recognized Authority on Every Phase of Building Construction and Widely-Known Writer on Topics of Structural Trade Interest.—An Expert on Skyscraper Construction.

With the death of Theodore Starrett, at his home in Prospect Plains, N. J., the building fraternity of this country lost a figure of national prominence and importance. Mr. Starrett was one of the founders of the Thompson-Starrett Company, building contractors, and was considered generally a one of the ablest engineers and constructors of modern office buildings and public structures in the United States. He had enjoyed excellent health until about one month ago, when he was stricken with opoplexy, which finally caused his death.

Mr. Starrett was born in Kansas, about fifty-three years ago, and received his education in the public schools, the University of Kansas and the Lake Forest University in Illinois. His mother is widely known as an educator and is the author of numerous books for girls. Mrs. Starrett was notable as the founder of the Kenwood Institute and also Mrs. Starrett's Classical School for Girls, in Chicago.

The early building experience of Mr. Starrett was obtained in the offices of Burnham & Root, builders, of Chicago, where he was placed in charge of important operations, involving immense expenditures. His first really notable work was as one of the engineers engaged in the construction of the World's Fair buildings in Chicago, after the completion of which he came to New York City imbued with ideas as to the future possibilities of skyscraper construction.

About twenty years ago he was instrumental in founding the firm of Thompson-Starrett Company, which since has made for itself a world-wide as well as national reputation in the erection of modern steel-skeleton skyscrapers and public and semi-public buildings in all parts of the country. He retired from this concern about seven years ago in order to undertake building construction independently.

During his active building career, Mr. Starrett erected more than one hundred and fifty fireproof structures and skyscrapers in New York and other large cities. Among these buildings are numbered some of the most interesting, artistic and elaborate of the notable tall structures of this country. He was particularly proud of his achievement in the construction of the railroad terminal at Washington, D. C.,

and the station for the Pennsylvania Railroad at Columbus, Ohio.

Considered as one of the leading authorities on the construction of skyscrapers, Mr. Starrett was frequently asked to contribute articles on this subject for publication in prominent newspapers and magazines. His writing was fluent and his style interesting to both lay interests and professional builders. Some of his papers have been published in two volumes under the titles, "Light on Dark Places" and "Skyscraper Building."

Mr. Starrett was a member of a large family of contractors and builders, all of whom have become prominent in their respective lines. He was the brother of Major William A. Starrett, Constructing Quartermaster General of the United States Army, in charge of the construction of army cantonments and the chairman of the Committee on Building Construction of the Council of National Defense. Another brother is Paul Starrett, president of the Geo. A. Fuller Company, builders. Goldwin Starrett, head of the architectural firm of Starrett & Van Vleck, and Ralph Starrett, of the firm of Starrett & Gross, builders, are other brothers.

He is survived by his widow, formerly Miss Elsie Ayers, of New York City, and two sons by an earlier marriage, Robert O. Starrett, of Nevada City, Nevada, and Sergeant Theodore Starrett, Jr., at present stationed at Fort Shelby.

The Executive Committee of the Hedden, Pearson, Starrett Corporation, on behalf of its directors, desires to express its sincere regret for the loss which the corporation sustains by the death of Mr. Theodore Starrett.

John B. Clermont, speaking on behalf of the Executive Committee of the corporation, said:

"Mr. Starrett's ongenial personality stood forth clearly in the wide circles of the building and engineering industries. In the field of his endeavors he has achieved an enviable reputation for activity, versatility and courage. He shared with his friends the full measure of his success. They and the entire community suffer a personal loss by his demise.

"Mr. Starrett had looked forward to a great future in combining forces with the Hedden, Pearson, Starrett Corporation. The

BUILDING STATISTICS.

Building and engineering contracts awarded in the section north of the Ohio and east of the Missouri Rivers—namely, New York, New Jersey, Pennsylvania, New England, Maryland, Delaware, and the District of Columbia, Virginia, West Virginia, Ohio, Illinois, Indiana, Iowa, Wisconsin, Michigan, Minnesota, North and South Dakota, and portions of Missouri and Eastern Kansas, from January 1 to October 1 totaled \$1,278,640,426, which is the greatest aggregate amount expended for operations of this character during the past eight years.

Building operations generally show a decline, and the increase already noted is due largely to the tremendous engineering projects now going on throughout the country, including Government and municipal work.

In Greater New York, during the month of September, 154 contracts were awarded for residential work, aggregating \$3,180,000, as compared with 166 residences in August, totaling \$3,973,000. During September 15 manufacturing buildings were projected, totaling \$179,000, as against 18 in August, involving \$760,000, and 104 miscellaneous buildings, \$4,196,000, as against 126 miscellaneous operations, involving \$4,478,000.

The contracts awarded for New York State during September comprise 350 residences, \$1,805,000; 46 manufacturing buildings, \$1,119,000, and 152 miscellaneous structures, \$16, mobilization construction. This latter work \$14,000. The above figures do not include New York State and New Jersey involves 22 operations, aggregating \$4,657,000.

The total amount of building and engineering operations in New York State and Northern New Jersey, for which contracts were awarded from January 1 to October 1, 1917, is \$247,355,000, as compared to \$180,803,500 in 1916, \$120,400,500 in 1915, and \$100,266,000 in 1914. This latter year reached the low mark since 1910.

COMBATS HOUSING NEEDS.

The Board of Trade of Easton, Pa., sets a good example in adopting a vigorous resolution and appointing a committee with power to act in regard to the problem of scarcity of housing accommodations in that city, coupled with increase in home rentals.

If every city in the country beset by a similar combination of circumstances would grapple squarely with the situation, they would soon discover the truth that building material price increases are no larger than similar appreciations in the cost of all commodities, and the value of individual home building as compared with the expensiveness of further extension of the landlord system could be pressed home with most effective emphasis.—"Building Supply News."

CONVENIENCES IN POPULAR DEMAND

Prospective tenants and buyers want to know how they are going to keep warm in the chilly mornings and evenings of the early Fall and late Spring, when it isn't practical to have the furnace going.

If you can point to a Baseboard Gas Outlet in each room to which Gas Heating Stoves can be readily connected your Prospect is then assured of a quick, clean and economical method of getting the desired auxiliary heat.

It's the Long Fire Travel in the Burnham Cosy Comfort Boiler That Makes the Short Coal Bill

IF you can keep the hot gases and smoke travelling back and forth inside a boiler long enough to extract the bulk of their heat, and still not make the draft sluggish; it's plain enough that less heat will go up chimney and more heat go into your radiators.

That back and forth action is what we call fire travel. It's this long fire travel in the BURNHAM Cosy Comfort Boilers that has a lot to do with making their short coal bills.

Our Engineering Department is at your service in solving Heating Problems

Proposals.

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposals" advertising. "The Builders' Guide" is the Only Medium in this Field.

SEALED PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C. October 12, 1917.—Sealed proposals will be opened in this office at 3 p. m., November 12, 1917, for the construction complete of two additional dolphins and the furnishing and installing complete of thirty-two spring buffers at the wharf of the Quarantine Station at Tampa Bay, Florida. Drawings and specifications may be obtained from the custodian at Tampa Bay, Florida, or at this office, in the discretion of the Acting Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C. October 12, 1917.—Sealed proposals will be opened at this office at 3 p. m., November 23, 1917, for the construction of the United States post office at Woodbury, N. J. Drawings and specifications may be obtained from the custodian of the site at Woodbury, N. J., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

WISCONSIN TO LICENSE ARCHITECTS AFTER JANUARY 1.

A law recently passed by the Legislature of the State of Wisconsin provides that on and after January 1, 1918, no person shall use the title "architect" in a business way, or in any way represent himself to be an architect, unless he has a certificate of registration.

The examining board is to consist of five members, including the State Architect, the Dean of the Engineering College of the State University and three architects appointed by the Wisconsin Industrial Commission, the body which administers the State building code. The commission has already appointed the members of the examining board as follows: Architects Alfred C. Clas, Milwaukee; A. C. Eschweiler, Milwaukee, and Henry A. Moeller, Green Bay. The ex-officio members of the examining board are F. E. Furneause, Dean of the Engineering College, Madison, and Arthur Peabody, State Architect, Madison.

The board is authorized to formulate the rules and regulations for the examination and registration of the architects. The applicant for license must present satisfactory evidences of a knowledge of sound construction, building hygiene, architectural history and mathematics, and, in addition, he must have had five years' experience in the practice of architecture. In lieu of the examination the board may accept the diploma of graduation from an architectural school of approved standard, followed by three years of experience in practice. Provision is also made to recognize registration obtained in another State having satisfactory standards. Any architects engaged in actual practice when the law was passed may receive a certificate without examination.

The industrial board issues the certificates to those certified by the board of examiners. This commission may revoke a certificate for cause. The registration law does not bar from the designing of buildings all persons who do not acquire a certificate. They are only barred from using the title of "architect."

"DENTAL WORK" ON OLD WINDOW SILLS.

In old houses one frequently finds oak or pine window sills instead of stone or cement. When the owners have been careless in keeping the same painted, it almost always happens that they become cracked and often decayed. Other parts of an old building may be quite sound—especially if it is a brick or stone structure—while the window sills seem quite ready to be taken out.

Unless the sills are very badly decayed the following method will restore them to an apparent condition of soundness, and will renew them for many additional years of service. With chisel cut away the decayed parts, much as a dentist grinds out the decayed parts

of a tooth. Cut well in until only bright wood is exposed. Dry the interior of such cavities with blow pipe flame until all moisture is removed.

Next prepare a mixture of fine sawdust and wood glue, crowding the same well into all parts of the cavities and cracks. Smooth the surface with putty knife.

After several days the surface of the sill should be scraped and sand papered until bright and smooth. If it is now painted it will appear perfectly sound and solid. Moreover, the filled cavities will remain intact permanently. Of course the sill will need to be kept carefully painted, for moisture will gradually disintegrate the sawdust and glue mixture if allowed to find entrance into it.

Builders who have contracts for repairing and painting old church buildings and similar structures should employ this method. It is not expensive, and will give results that greatly please. Door sills may be repaired in the same manner.

E. V. L.

THE QUEBEC BRIDGE—A SERMON IN DETAIL.

The completion of the Quebec bridge after two disasters marks a triumph in bridge engineering, yet the ultimate success of this project has rested not so much on a spectacular struggle with well-nigh insurmountable difficulties as in more or less prosaic effort to perfect the details of this great structure in all its parts. The story of this ill-fated project is a sermon on the importance of minute care in detail, since both of the disasters which befell it were brought about through oversight of seemingly minor features. In the first case it was carelessness in the revision of dead-load calculations and in the proportioning of the lacing bars of the compression members. In the second case the design of the saddles by which the span was supported from the elevator hangers was at fault. Bridge engineering is essentially a matter of minute, painstaking detail. Imagination and vision play but a small part in the successful completion of even the most wonderful structure. One of the best illustrations of the importance of detail can be found in the field of movable bridges. In most of the types the fundamental principle is implicitly itself, but ultimate success involved years of experimentation. In one of the first types developed a period of twenty years elapsed after the first structure was built before a second one was attempted. The first one was a most indifferent success, while a greater perfection of working parts in the second led to the repeated use of this design in subsequent structures. Bridges or ordinary proportions built to-day are better than those of years gone by, not so much because new types or designs have been evolved, but because greater care is taken in the proportioning of the details and closer attention is given to the perfection of the workmanship in the shop and in the field.—"Railway Age Gazette."

Our specialty is Portland Cement that will stick and pass the City Department. **DAVID FRANCE CO.,** Tasker Street Wharf, Delaware River, Philadelphia.

READJUSTMENT AT HAND.

One of the "natural consequences of the establishment of a fixed basic price for steel and iron products, coal, copper and other structural essentials will be a readjustment of the building trades to meet the new conditions arising from the Governmental action. In effect, this will be far-reaching, as it is but a small percentage of the structural interests that will not, in some form or other, feel the influence of the price fixing policy.

For a protracted period the building trade and its allied interests has suffered as a result of the highly inflated prices of structural materials. The excessive cost of fabricated steel was one of the principal factors in the prohibitive construction costs. The erection of new buildings, particularly that type involving a framework of fabricated steel, had practically ceased on account of the high prices and delayed deliveries of this important community. The industry as a whole was halted and its progress all but stopped by virtue of the unprecedented conditions that were combined in slowing down construction to the minimum.

With basic prices fixed by Governmental order the outlook for a marked improvement in the building situation is exceptionally bright. The improvement will not follow immediately, however, but will be the outgrowth of a gradual readjustment back to the conditions that maintained in normal times. Before the national or local building situations are able to emerge from the cloud of depression and uncertainty that has enveloped them for altogether too long a period, an indefinite time must elapse during which the building industry in all of its manifold phases must revise not only its mental attitude toward the future, but its actual working conditions will of necessity be forced to undergo a complete metamorphosis on account of the new influences that have been injected into the situation. Until this period has successfully passed progress will probably not be marked, but it is generally conceded throughout the industry that the transformation will not require more than a nominal space of time.

When the building industry is finally readjusted in accordance with the price fixing principle and the respective units have come to a complete realization of the importance of a comprehensive co-operative movement for the ultimate benefit of the industry, the commencement of the long predicted and hoped for building boom will be close at hand. From the existing indications the predicted activity will equal, if not exceed, any movement of recent times. Certainly there is ample opportunity for a greatly increased structural activity that will include practically all lines of structural endeavor. This fact is conceded by even the most pessimistic among the building interests. The demand

will necessitate an amplified production in all branches of construction work and through this activity the building business will return again to its former prominent position among the leading industries of the nation.—"New York Record and Guide."

PLAN HOMES FOR MUNITION WORKERS.

National Society for Defense Making Survey of Needs Throughout U. S.

As a measure of protection against inadequate housing of labor employed in munition manufacturing centers the National Society of Defense is making a national survey to ascertain the need for immediate construction of thousands of non-steel buildings, says the Dow Service Daily Building Reports of New York.

Henry Atterbury Smith, the architect, has been serving as an investigator for eastern centers, including Cleveland, Akron, Pittsburgh, Chester and the Naugatuck Valley, including Bridgeport, and asserts that some means must be found for providing cheap money for building proper dwellings for workers if Government war requirements are to be supplied at the pace the present stage of the war demands. The investigation so far has developed the fact that a wholesale shifting of industrial population is forcing a condition that will prove to be important in meeting at an early date the growing demand for housing and the present timidity of building money.

Sees Building Revival.

This fact, coupled with the belief of Walter T. Smith, vice-president of the George A. Fuller Company, who has his finger on more than \$25,000,000 worth of proposed new building construction the country over, that some time around the first of the year the building situation as a problem would substantially clear itself, an increasing number of persons interested in building construction are led to believe that a demand for construction is gradually developing that despite the present price levels construction work would again get under way.

In the building material price market a general stability of levels has prevailed during the last seven weeks. Increases that have occurred, such as, for instance, the change in the price of Indiana limestone from eighty-three cents to ninety-three cents a cubic foot to the present level quoted this week of eighty-nine cents to \$1.04, is due to the increase in freight rates that have become effective on some of the western railroads.

Readjustment Setting In.

In virtually every department of the building construction market there are increasing evidences that the period of readjustment is

setting in. Conferences, wage revisions, delivery agreements and similar negotiations apparently indicate general plans for getting ready for a return to normal conditions just as soon as the coming Liberty Loan campaign is over and the banks and lending companies ascertain definitely how much money depositors are going to patriotically withdraw in order to subscribe and how much of a strain the \$100,000,000 block that the local insurance section alone will absorb, will place upon the local money market. The great demand for construction at present is expected to force a quick recovery and an early passing of the building situation as a problem.

CONTRACT REFORM BEGINS BEFORE WAR.

"Contract reform traceable to the unusual conditions attending the war is being extended to Mississippi River work done under the direction of the Corps of Engineers, United States army," says the "Engineering News-Record."

"There has been adopted for this work a cost-plus-25-per-cent form of agreement under which bids are asked and contracts awarded on a field cost per cubic yard. If the contractor does the work for less than the bid price, he receives half the saving, in addition to his percentage of the bid cost. If the work costs more than the bid, the excess will be deducted from the 25 per cent. of the bid cost which the contractor would have received, up to the point where the amount deducted becomes 10 per cent. of the bid cost.

"A greater premium is thus put on saving than in the case with any private work of which this journal has been informed. Very economical work should result. On the other hand, the contractor cannot, in the event of unforeseen rises in labor and materials, receive less than field cost of the work, plus a fee equal to 15 per cent. of his bid. Thus, no work is apt to be thrown into the hands of a receiver, even as a result of unfortunate circumstances, which is also greatly to the Government's advantage.

"These percentages are not excessive when it is remembered that absolutely nothing except labor and materials consumed in doing the work is included in the field cost. Even freight and unloading charges on plant are paid for out of the fee. Furthermore, the Government reserves the right to place additional plant on the work at the contractor's expense if progress is not satisfactory.

"The experience to be gained with these contract provisions and with those adopted by the Bureau of Yards and Docks of the Navy Department ought to go a long way toward educating the public to the many urgently needed reforms in contract provisions on public work in general."

As The Editor Sees It

READERS of THE GUIDE will recall the remarkably inept statement, issued some time ago by Chairman Willard, of the Federal Transportation Commission, concerning curtailment of building activity as a step to the conservation of the nation's military resources. THE GUIDE took vigorous exceptions to Mr. Willard's stand, at the time, pointing out that building was quite as important to the welfare of the nation as to the individual. Dealing with this same subject the *New York Real Estate Record* remarks:

"It is possible that the several prominent financiers, extensively quoted recently in the press, have confused the building of skyscrapers, fine residences, etc., with the general building and engineering construction of the whole country, of which skyscrapers, fine residences, etc., have actually been for some time but a negligible percentage.

"When they discourage building they perhaps didn't intend to discourage necessary general building and engineering construction.

"Their remarks, however, are likely to be misinterpreted by banking houses and other institutions and to react in a disastrous way on the building organization.

"Our war problem is not that of the hundred yard dash variety, but rather that of a Marathon. Once started in this war, no man knows where or when we will finish.

"To-day we have three and a half

acres per capita under cultivation which can produce food enough for ourselves and even some for our allies. We should increase this.

To-day we have more than half the tools of industry of the world which can produce munitions and maintenance for ourselves and also some for our allies.

"We should, by construction and building, increase the plant and by organization, increase its efficiency.

"It may be desirable to change the character of the construction, but of necessity the plant must be maintained and increased.

"To stop work on the plant is to limit production as the war is prolonged, whereas we should be in a position to meet any eventualities by increasing the plant and its productivity.

* * *

DURING the past few years we have unintentionally allowed our shipbuilding industry to become disorganized and how we are now suffering for lack of shipping facilities! Shall we allow our building industry to likewise become demoralized?

"Shall we stop building bridges, piers and docks, mills, factories, power plants, railroads, freight terminals, warehouses, sewers, hospitals and institutions, training schools, fire and police stations and housing facilities, armories and cantonments?

"Have we no need for organized building trades with the support of the finan-

cial and transportation functions of the country to produce these tools of industry?

"May not the remarks of the gentlemen in question have a tendency to disorganize this industry, which has been capable of producing between two and three thousand million dollars worth of taxable and earning property each year and which will certainly be called upon to produce a large amount of construction of possibly a different kind during the coming year?

"While the above applies to war conditions, the fact must not be overlooked that all nations are preparing to protect their industrial status after the war is over. The demoralization of the building trades, at this time, will not only adversely affect the tools of industry necessary to the production of war supplies but also adversely affect the continuity and efficiency of industry when the war is over, at which time we will have serious industrial problems to meet. Nearly twenty years elapsed after the Civil War before conditions again became normal."

* * *

ON the subject of the growing demand for housing accommodations the same publication observes:

"Along with the speeding up of the numerous industries engaged in the manufacture of war munitions and supplies there has come a problem that is daily growing more acute. The produ-

**BLUE
PRINTS**

cers of these commodities have had occasion to vastly increase their working forces, making inducements to laborers, both skilled and unskilled, to come to them from other employments and from distant parts of the country. These workmen, many with their families, must be adequately housed in order that the maximum of working efficiency be maintained. The problem of housing them in commodious and sanitary structures is now a paramount issue in the eyes of both employers and Federal authorities and definite steps have been instituted to alleviate the present intolerable housing situation.

"In the cities of Bridgeport, Conn., Akron, Ohio, Norfolk, Va., Bayonne, N. J., and Chester, Pa., the conditions under which the laborers in the munition factories are living are such that immediate relief should be provided so that proper prosecution of the industries may be possible. The factory operatives in these cities have steadily increased in numbers since the commencement of the war. The housing facilities have not been extended in proportion, therefore the workers to-day are herded into quarters originally designed for a fewer number of occupants. The sanitary conditions are bad. They are the result of crowded conditions of the living quarters that call for relief measures on a large scale.

* * *

THE National Housing Association discussed this problem at its recent annual meeting in Chicago. The Federal Government is making a careful investigation into the situation with the prime idea of instituting prompt measures for effecting improved conditions in the living accommodations of these workers. The Government has held hearings before the Advisory Commission of the Council of National Defense to devise ways and means for adequately housing the thousands of munition factory operatives. Various plans have been suggested, one of which is that the Federal authorities advance funds to the producers of munitions for the erection of homes for their operatives. Another plan calls for the formation of housing associations in the afflicted cities, particularly those centers where the need is acute and have these bodies arrange for the financing and erection of the required number of accommodations. A third plan is to have the Government purchase the land in the cities and erect standardized homes which could be rented to the workers at moderate terms. This plan seems to be the least feasible of the three as the Government is manifestly not in the real estate or building business and at present has sufficient problems in its successful conduct of war activities.

"The solution will not be a matter that can be decided in a moment, but will only be arrived at after long and careful deliberation and consideration of all the conditions involved.

* * *

AN investigation, set afoot by the Material Men's Exchange of New York City, with a view to determining the causes for the depression in speculative building, now bids fair to go beyond the purely local confines to which, originally, it was limited and to become a national movement. Builders' Exchanges in the various cities are taking the matter up with a prospect that there may result a concerted and practically nation-wide drive to stimulate operative activity.

* * *

KEITH'S MAGAZINE, under the heading of "The Gospel of Better Homes," embodies some homely but sound philosophy on the subject of the community influence of good building. Says *Keith's Magazine*: "It is a generally conceded fact that the building of a beautiful home in a community, immediately increases the value of real estate in that vicinity. The result is apt to be like the story of the Japanese print in the garishly furnished home, which eventually brought the whole furnishings of that home to its own artistic level. Men who make their neighbors desire better things are an asset to their community; and just so, a beautiful home is a sermon in material form; not a thought expressed once and possibly forgotten, but enduring, just in proportion to the enduring equality of its own beauty.

"No point in the psychology of living is more insistent than the influence of the home on the development of the growing generation. We read, 'All children advertise the quality of the home from which they come.' And again, 'The home is the greatest manufacturing plant in the world, because in it, are created the bodies and brains of the men and women of the world.' 'Whatever enters the home, whether thoughts, or material substances, will be manifested sooner or later in the people who live in that home.'

"The nation can never be thoroughly true and wholesome, in living or in politics while the home is filled with insincerity either in its spirit or in its building construction. The living contact with and the tolerance of insincerity in its many forms bites deep into the character, and even more especially when it is in its formative stage. The funny sayings of children, 'the wisdom of babes,' comes from the childish insight which sees straight to the heart of things, for 'they do not understand' the traditions

and formalities in which we unconsciously wrap ourselves. Their standards are set and fixed indelibly by the casual things about them which beat in on the forming, subconscious mind, often more so than by the things conscientiously taught to them.

"Every man who is building either for himself or for others is coming to realize the actual cash value of all these palpable, almost indefinable, things which the commercial spirit disregarded. To realize that comfort, convenience and beauty will bring a higher rent and a bigger selling price, as well as secure a more satisfactory home.

"After the war it will be found that the country has so far outgrown its housing that it will be necessary for builders to turn away the work which will crowd their every facility. The house builder should realize that the cost of building cannot materially decrease in this country, for remember that Europe is to be rebuilt. There will be a foreign market ever increasing the demands for American-made products."

* * *

ONE result of the European war which will have a far-reaching effect will be the determination on the part of many of the manufacturing countries to require that all goods offered for sale, either domestic or export, shall carry a mark denoting the country of origin.

It is not generally known that the term "Made in Germany" was not a matter of choice on the part of German manufacturers, but was first required by England as a means of identification on all goods imported from Germany on account of the inferior goods competing in the English market. Improvement was immediate and marked when identification was required, until the mark came to stand for high-grade goods.

England has long had respect for the product of English factories, says the *Wall Paper News*, and the term "Made in England," as a distinguishing mark, has been promoted by patriotic pride rather than as a requirement of law. The same considerations are true of things made in Canada, and there have been many "Made in Canada" fairs, for the purpose of emphasizing the brands and qualities of home products.

France has now through the Union Nationale Inter-Syndicale Des Marques Collectives adopted the initials, U. N. I. S. and the word France, as a guarantee of French origin.

TO prove the building fireproof, Edward F. Croker, one time chief of the fire department of New York City, is said to have burned up the con-

tents of one room in his home at the housewarming recently. He deliberately set it on fire and then asked his 150 guests to sit down to an elaborate dinner without doing more than closing the door to the room in which the fire was raging.

Ex-Chief Croker did not call a fire department—he did not want any; in fact, he wouldn't allow anyone to try to stop

it, and, there is no insurance on his property.

One of Mr. Croker's hobbies is fire prevention. He has for some time insisted that fire in residences were things that could be controlled, if they could not be absolutely prevented, and built a house to prove it, and incidentally to live in. To demonstrate that the house is unburnable, he gave his housewarming.

EDITORIAL NOTES

The Hardware Manufacturers' Association at its recent convention at Atlantic City elected officers as follows: President, Charles W. Asbury, of Philadelphia; vice-presidents, Frederick H. Payne, of Greenfield, Mass.; A. W. Stanley, of New Britain, Conn., and Frank Baakes, of Chicago; members of the Executive Committee, George T. Bailey, of Pittsburgh; W. D. Biggers, of Detroit; D. A. Merriman, of Chicago; W. J. McCurdy, of Catasauqua, Pa.; J. C. Schmidt, of York, Pa.; J. I. Andrews, of Pittsburgh; Seneca G. Lewis, of Jeannette, Pa.; H. Sanborn Smith, of Birmingham, Ala., and secretary-treasurer, F. D. Mitchell, of New York, who was re-elected.

The National Hardware Association of the United States, composed of wholesalers and jobbers, elected the following officers: President, C. A. Knapp, of Sioux City, Ia.; first vice president, Bruce Hayden, of San Francisco; second vice-president, J. B. Silliman, of Atchison, Kan.; secretary-treasurer, T. James Fernley, of Philadelphia; members of the Executive Committee, Frederick F. Luecke, of Milwaukee; W. H. Dunlevy, of Philadelphia; F. A. Heitmann, of Houston, Texas; A. H. Decatur, of Boston, Mass.; members of Advisory Committee, W. S. Wright, of Omaha, Neb.; J. D. Moore, of Birmingham, Ala.; Robert M. Dudley, of Nashville; W. D. Taylor, of Cleveland, and A. J. Bihler, of Pittsburgh.

American Iron and Steel Institute held its autumn meeting at the Hotel Sinton, Cincinnati, Ohio, October 26-27. The entertainment committee consisted of the following: James I. Stephenson, Cincinnati Iron and Steel Co.; John E. Woods, Carnegie Steel Co.; B. W. Lamson, Bourne-Fuller Co.; Buckner Wallingford, Walter-Wallingford & Co.; D. B. Beacham, Rogers, Brown & Co.; George M. Verity, American Rolling Mill Co., and Thomas Quinlan, Cincinnati Chamber of Commerce.

Standard Concrete Steel Company, formerly of 413 East Thirty-first street, has opened new offices in the Tilden Building, 105 West Fortieth street, New York City. The company is represented by Mr. Mason, William C. Tobey, William R. Hughes and Frederick Selar.

Edgar I. Mills, who has been identified for a number of years with the export branch

of the steel industry, has joined the iron and steel department of the Federal Export Corporation. Mr. Mills resigned from the American Steel Export Company October 1 to assume his new duties.

The Vulcan Steel Products Company has opened an office in Havana under the management of G. O. Simpson. In connection with this office there will be maintained a permanent exhibition of machinery and steel and iron products, in which the company deals.

More than \$8,000,000 has been added to the 1918 budget of New York City on account of the imposition of the State direct tax. Property owners who have been watching with alarm the steadily advancing cost of municipal government should begin to realize that a goodly share of the city's financial burden is traceable to mandatory State requirements.

Government construction work continues to predominate this week in the building field. The activity is widely scattered and substantially all parts of the country will reap the benefit of the immense volume of work already under construction or contemplated for an early start. This phase of building endeavor is to-day more active than it has been since the entry of the nation into the war. Almost every day there are announcements of additional operations added to the already heavily loaded program. New projects are being presented to the trades for estimates, and appropriations granted by Congress for others. The work includes large additions to training stations and cantonments, base hospitals and the erection of vast storage and warehouses for military purposes. The building program of the Government might now well be said to be thoroughly under way. The more recently projected operations are for the most part permanent structures that will be a part of the enlarged regular army establishment.

The inability of obtaining prompt deliveries of fabricated steel for building purposes is responsible for withholding a number of important projects from active construction. The price situation is not so tense as is the question of deliveries. There have been fewer operations presented for estimates this week, architects and owners seeming willing to de-

lay their projects in the hope of considerably reduced material prices and a settlement of the labor difficulties.

The market for building materials and supplies with few exceptions is quiet, with prices holding firmly at the levels that have now maintained for some months. The structural steel situation is still unsatisfactory and it is mainly for this reason that the building situation is in the stagnant condition that it is. Brick, terra cotta, cement, lime, and other basic materials are easy, with deliveries practically assured and prices stabilized. There is no present indication of a marked price movement in any direction, although it is difficult to forecast exactly what would be the effect of a sudden increase of building activity.

One of the most encouraging features of the current situation is the fact that there seems to be a better feeling on the part of the speculative interests to commence the operations they have contemplated for many months. Architects interested in this class of work are hopeful for the future and many have advised their clients that the present time is an excellent one to make preparations for an early start. Material prices, with only a few exceptions, are not likely to be substantially lowered, and in view of the fact that the demand for housing accommodations is still unsatisfied the opportunity for the speculative builder seems to be close at hand.

As the result of the meetings recently held by the New York Committee on the Alleviation of Building Stagnation, and its various sub-committees, at least two important things have developed. In the first place, it has been established that the movement is one of vital importance not only to the building trades, but also to the community at large, and second that there is a field for a permanent organization which could care for questions of importance along these lines, as they might arise. The expansion of the campaign throughout the country has taken tangible shape. Austin L. Black, of the "American Contractor," stated that his paper has authorized his going to Chicago, Boston, Philadelphia, and other leading metropolises, in order to inaugurate the movement. It is proposed that the committees in the various cities will co-operate with the New York City Committee, and as the result have a convention which will be national in scope.

Secretary of the Interior Lane has authorized the establishment of a mining experiment station at Columbus, Ohio, under the jurisdiction of the Bureau of Mines, the station to represent the ceramic industry of the United States. Columbus was selected as the site for the station because it is the capital of the State recognized as the center of the clay-working and allied industries, and also because the Bureau can work in co-operation with the School of Ceramics at Ohio State University and also gain the expert advice of Prof. Edward Orton and Prof. Arthur S.

Watts, noted authorities of the subject of ceramics, who are connected with that school.

* * *

Manufacturing of building material in France is virtually paralyzed from the lack of labor, or diversion of labor to more warlike things. Therefore that country must look elsewhere for its brick, terra cotta, cement and specialties. The United States has already begun to supply the Frenchmen's needs. A large shipment of bricks was made last week, and it is undoubtedly the forerunner of shipments of other building products. Architectural terra cotta should make an especial appeal to the French esthetic taste, and the American manufacturer may find this a big field. But outside of its architectural possibilities, terra cotta will permit France to rebuild not only quickly but permanently.—Exchange.

* * *

The American Institute of Architects has

decided not to hold its usual convention this year on account of the war. Many members have joined the colors, while others report business so uncertain that they do not feel in a position to attend the convention with its accompanying expenses.

* * *

The plan to buy cement in bulk which is being advocated by the Cement Association, has many advantages. It is stated that a positive economy can be effected in almost all large concreting operations by purchasing cement in bulk when carload lots are required. It is estimated that the efficiency of handling bulk cement in wheelbarrows is fully 10 per cent. greater than in handling it in sacks. There is a considerable saving in cement lost in sacks and of time in emptying, examining, and packing sacks, beside the direct cost of sacks. On large jobs special conveyors are efficient for unloading the cars and delivering the cement to the concrete mixer.

crease the membership. The membership should shortly grow to several hundred, perhaps several thousand, depending on the sub-contractors, as to whether they will join. This organization will, in time, be one of the most powerful in this city. The business as conducted by the thousands of sub-contractors amounts to millions of dollars annually. The organization has almost unlimited power and control. The by-laws, business forms, books, etc., have been examined, necessary changes were made, now the aforesaid are in proper legal form, so the association can conduct the business in a perfectly legitimate and safe manner.

It is an admitted fact that the average man in business does not know how to handle limits of credits, proper way and time to make collections, sign contracts which are fair and equitable, nor is he in a position to demand arbitration, etc.

The wonderful corporations which we have in this country, the office is sub-divided into many departments, viz., general manager, assistant manager, purchasing agent, sales manager, credit manager, collection department, publicity department, legal department, etc. The average man in business must handle, himself, all of these many perplexing problems. The large mercantile agencies inform us that ninety per cent. of the failures each year are among small concerns that are rated five thousand dollars or less. This is evidence enough that the average business man has too many details to look after to make his business a success.

It is admitted that a credit association, in any one distinct line in the building trades, is not a complete success, owing to the fact that purchasers of building materials only make special efforts to pay promptly concerns who have a superior system of extending credit.

This association proposes drafting a uniform contract, which will eliminate many of the objectionable clauses which are now embodied in many of the so-called "uniform" contracts now in general use.

The material concerns furnish the materials and labor, why should they not state their own conditions and terms of sale. The manner of doing business, at present, is not conducted along the lines now in general use in other lines of business. The present manner of doing business is to receive fifty to ninety per cent. the 15th of the month for labor and material furnished during the preceding month, the balance is paid at some future time, after the building has been occupied and accepted by the owner, architect, and general contractor. The limited profits, in the respective lines, do not permit of extended terms of sale, as aforesaid.

This association proposes to make a speciality of collection of over due accounts. The cost of same will be nominal, and will be a material saving to the members.

Efforts will also be made to keep a close watch regarding the matter of mechanics' liens, transfers of real estate, judgments filed, mortgages recorded, etc.

CREDIT ASSOCIATION OF THE BUILDING TRADES ORGANIZED

New Association Meets a Long-felt Commercial Need and Will Keep Members Posted on Market Conditions and Place Philadelphia on an Equal Footing with the Building Industry of Other Large Cities.

A new organization of the Philadelphia building trades has been formed under the name of the Credit Association of the Building Trades of Philadelphia.

Officers have been elected as follows: A. D. Weber, president; William P. Thompson, treasurer, and M. G. Sellers, secretary. An executive committee has also been formed. The new association has established headquarters at 1518 Sansom street.

This association is incorporated under the laws of the State of Pennsylvania. Organized to foster the welfare, reform abuses and in all lawful ways promote and protect the business interest of the members. The monthly and special meetings featured by exchange of ideas and addresses on difficult problems in conducting business.

This association is the result of the untiring efforts of the president, A. D. Weber, who is connected with the Building Trades as treasurer of the O. M. Weber Co., Inc., manufacturers of wood work. This work has covered a period of twelve or more months of strenuous effort on the part of the president. Associated with him is the secretary, Mr. M. G. Sellers, with offices at 1518 Sansom street, who has had a wide experience in association work, and the association is very fortunate in securing so competent a man to take general charge of the compiling of records and the general management of the association during the daily course of business. The office of secretary (not a member of the association), being therefore appointive under the by-laws, Mr. M. G. Sellers was selected and duly sub-

scribed to the necessary oath of office in the discharge of his duties.

Also associated with the president is Mr. William P. Thompson as treasurer, a gentleman of wide experience and superior intelligence, who will also take an active interest in the general management.

In the first public official bulletin covering the activities of this organization, it is appropriate to announce that the charter was duly granted in the Court of Common Pleas, No. 1, on July 12th, the objects as expressed therein being:

"To encourage trade, receive and supply to the members information as to commerce, exchange, credits, markets, to compose differences, collect debts and in all lawful ways to conserve and advance the business interest of its members."

The by-laws, working and arbitration rules and various form letters specially designed for use in conducting the affairs of the association have been duly approved by counsel of recognized standing in corporation law.

The charter members are A. D. Weber, William P. Thompson, R. C. Williams, Jr., E. B. Newcomer, Daniel Adams, and E. P. Henry. These gentlemen's names will be framed and be recorded on the original minutes of this organization as benefactors for the successful continuance of the many respective kinds of business which are identified with the general construction business.

This association will soon be in active business. The present membership is growing. A strenuous effort will now be made to in-

The association also proposes to make every effort to arbitrate accounts in dispute, wherever possible, so as to eliminate the necessity of bringing suit, with the endless expenses for attorney's fees, court charges, delays in payment, etc.

The association also proposes to take an active interest in local, State and Federal legislation, so the members' best interests are properly taken care of.

The association therefore is covering a wonderfully broad field and should be one of the most powerful organizations in this State.

The association will operate over a radius of fifty or more miles from City Hall; in fact, will furnish reliable information throughout the territory as aforesaid.

The successful handling of credits, contracts, etc., has never been more important than right now, owing to the strenuous times which we are now experiencing, owing to the war.

The sole governing power of the association is vested in the Executive Committee, comprising the following, and representing the respective lines of business, viz.: A. D. Weber, wood work; William P. Thompson, steam heat-

ing; R. C. Williams, Jr., electric; E. P. Henry, tile; H. W. Geshwind, cement and asphalt.

This Executive Committee will be increased as the membership is increased and the respective lines of trade delegate an individual to represent their association.

This committee will exercise their skill to practice economies in credit granting that will tend to the reduction of unnecessary waste and losses. With the exercise of reasonable liberality, together with the exercise of reasonable prudence on commercial economy, so as to enable the members to give credit in such form and manner and under such conditions as to keep the channels of business at an even flow, but to discourage every form of credit gambling and mere chances that are wasteful to the giver and either harmful to the receiver or which encourage schemes of commercial deception and fraud.

This association proposes entering into an understanding or an agreement with a similar association operating in Manhattan, Bronx, Queens, Brooklyn and Harlem, New York City. This association has had ten years' experience, and has been wonderfully successful.

ber Trade Ass'n; F. S. Hanley, Eastern Supply Assoc.; G. Osgood Andrews, Plate Glass Mfrs. of America; Hurd, Portland Cement Ass'n; Arthur B. Pendleton, Nat. Terra Cotta Soc.; Herbert D. Lounsbury, Jos. Paterno, Col. John B. Rose, Arthur K. Mack, Record and Guide; Wm. K. Hammond; H. M. Keasbey, Hon. Ernest R. Ackerman, Michael Cohen, Geo. E. Gifford, Sec'y Bridge Builders and Struct. Soc.; Allen E. Beals, Herman Plaut, Lighting Fixture Assoc.; A. E. Davidson, Edward Margolies, Harry Alexander, S. J. Treat, Sec'y Assoc. Dealers in Bldg. Mtls., and Wm. H. Powell.

Committee on Supply and Price of Mortgage Money: C. J. Curtin, Audley Clarke, Vice-Pres., Credit Asso. of Building Trades of New York; Walter Stabler, Comptroller Metropolitan Life Insurance Co.; Walter Lindner, Solicitor Title Guarantee & Trust Co.; William E. Knox, Comptroller Bowery Savings Bank; Frederick A. Snow, Joseph Paterno, William H. Rockwood Mills, Edward Margolies, F. C. Zobel, Orin F. Perry, John F. Calhoun and Robert J. Grannis, Jr.

Committee on Building Laws: Franz Neilson, Sec'y Credit Ass'n of the Bldg. Trades; L. W. Harrington, Pres. Credit Ass'n of the Bldg. Trades; Orin F. Perry, F. C. Zobel, Frank E. Conover, Cass Gilbert and Robert D. Kohn.

Committee on Supply and Price of Labor: Walter T. Smith, Charles E. Cheney and Charles Burns.

It is a foregone conclusion that rentals will not recede, anyway for many years to come. One reason can be attributed to the fact that building costs have been advanced through the multitude of legislation which has forced builders to follow certain lines. While houses have been improved and are safer in many ways, still the question of cost comes up again.

The Committee has taken into consideration and approved of the policy of the Government as to deliveries of materials. Naturally the Government is the first to be supplied and then its Allies, and finally the private consumer. It is believed, however, that ways and means will be found by which there will be enough surplus left, after the Government has obtained its requirements, to fill the demand of the private consumer.

The next meeting of the Committee of the Whole was set for Tuesday October 16, at three o'clock, in the offices of the Building Materials Exchange, Room 1022, Woolworth Building, New York City.

The world is just chock full of men who failed because they expected buyers to romp right in and ask for goods. Modern business spends big money simply to get the buyer interested knowing that sales follow.

NEW YORK MATERIAL EXCHANGE INVESTIGATING BUILDING CONDITIONS

Committee Appointed to Examine into the Underlying Causes of Depression in Certain Structural Lines and to Promote a Return to Normal Activity.

The movement recently started to stimulate building construction, not only in New York City, but also in the surrounding territory, received impetus, through a meeting held at the office of the Borough President of Manhattan.

The Building Material Exchange, which was the inaugurator of the movement, is using every endeavor to examine into the conditions as they exist to-day, and what the immediate future will bring forth. To this end five sub-committees were appointed at the meeting, having for their provinces the following subjects:

First, whether a demand exists for new building construction, and to what extent; second, the supply and price of building materials; third, the supply and price of labor; fourth, the money situation, and fifth, legislation.

President Elliott Smith, of the Candee, Smith & Howland Company, was appointed chairman of the Committee of the Whole. He voiced as his opinion that small sub-committees were undesirable, inasmuch as the tendency would be to let one or two men do the work, and interest might flag. On the other hand, Mr. Smith contended that everyone on the Committee as a Whole should be represented on such sub-committees as he might be best fitted for,

and thus get a real expression of opinion and obtain a solution of the problem.

It is proposed that the sub-committees meet at stated times, and then report, say once a month or oftener, to the entire body, thus all will be conversant with what is going on and might be in a position to make helpful suggestions.

The following is the personnel of the various committees:

Committee on the Demand for Buildings: Laurence McGuire, Pres. U. S. Realty & Construction Co., and Real Estate Board of New York; H. H. Murdock, Real Estate Board; Henry Atterbury Smith, N. Y. Chapter Amer. Ins. of Architects; Thomas Rock, Central Federation Union; Arthur K. Mack, Record and Guide; Walter T. Smith, Geo. A. Fuller Co.; Roy Wingate, Cauldwell-Wingate Co.; Ernest L. Smith, Fred T. Ley Co.; Philip Hiss, Chairman of Housing Section, Council of National Defence; John J. Radley, Hugh Getty, Pres. Building Trades Employers' Asso., and R. A. Bartholomew.

Committee on Supply and Price of Materials: C. J. Curtin, W. C. Shultz, Audley Clarke, Vice-President Credit Assoc. of Bldg. Trades of New York; F. N. Howland, Pres. Assoc. Dealers in Bldg. Material; Russell Johnson Perrine, Pres. N. Y. Lum-

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Service Building, Erie avenue and Twentieth street, Philadelphia. Architects, The Watson Engineering Co., Cleveland, Ohio. Owners, The White Co., 216 North Broad street, Philadelphia. Reinforced concrete and stone, 1 story and mezzanine floor, 253x243 feet, slag roof, cement and pine floors, metal lath, hollow metal skylights (heating and lighting reserved). Owners, care of W. P. Brown, have received bids.

Bakery, 1229 Federal street, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, S. Sessinia, 1439 Wharton street, Philadelphia. Stone foundations, brick, 2 stories, 15x55 feet, slag roof, cement and yellow pine floors, electric lighting, tile work, hollow metal skylights, flush bulks, metal ceilings, concrete and steel subway, brick ovens. Owner will sub-let all contracts.

Store and Service Building, 1821 Chestnut street, Philadelphia. Architect, F. N. Greisler, Lafayette Building, Philadelphia. Owners, Willis-Winchester Co., 1001 Chestnut st., Philadelphia. Brick and ornamental terra cotta, 2 stories. Architect has received bids.

Store (alt. and add.), 3222 North Front st., Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, John M. Kennedy, Jr., 1001 Chestnut street, Philadelphia. Brick, 2 stories, 14x15 feet, slag roof, yellow pine floors, hot water heating, plumbing, electric lighting, tile and marble work, flush bulks, metal ceilings. Owners will be ready for bids in about one week.

Residence and Garage, Twelfth and Wyoming avenue, Philadelphia. Architect, private plans. Owner, Henry P. Schneider, 3717 Old York Road, Philadelphia. Brick, 2 stories, 16x56 feet, and 1 story, 12x20 feet, slag roof, hot water heating, electric lighting, hardwood and cement floors, tile work. Owner taking sub-bids.

Factory, Torresdale avenue and Orchid st., Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owners, Pechin Belting Co., care of Mr. Andrew MacAllister, on premises. Stone foundations, brick, 1 story, 33x100 feet and 62x75 feet, L shape, slag roof, concrete floors, steel work, millwork, roof ventilators. Plans in progress. Architect will take bids in about ten days.

Factory, Wayne and Roberts avenues, Germantown. Owners, The Brown Instrument Co., Wayne avenue and Windrim street, Philadelphia. Brick. Too early for details. Work contemplated.

Dispensary, Navy Yard, Philadelphia. Architect, private plans. Owners, U. S. Government, Bureau of Yards and Docks, F. R. Harris, Chief, Navy Department, Washington, D. C. Reinforced concrete and brick, 2 stories, 36x86 feet, slag roof, composition floors, steam heating, electric lighting, tile and marble work, metal lath, roof ventilators, waterproofing, wire work. Low bidders: McCloskey &

Bahls, lowest bidder; Evans Const. Co., second low bidder; Lam Building Co., third low bidder.

Store and Residence (alts.), 1231 Federal street, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, S. Sessinia, 1420 Wharton street, Philadelphia. Brick, 3 stories, consists of general interior and exterior alterations. Owner will sub-let all contracts.

Salvage Storage Building, Navy Yard, League Island, Philadelphia. Architect, private plans. Owners, U. S. Government, Bureau of Yards and Docks, F. R. Harris, Chief, Navy Department, Washington, D. C. Frame, 1 story, 90x80 feet, ready roofing, plan floors. Low bidders, McCloskey & Bahls, 1620 Thompson street, Philadelphia, \$4,375.

Store Building (alt. and add.), Moyamensing avenue and Clarion street. Architects, Louis Magaziner & Victor Eberhard, 603 Chestnut street. Owner, Wm. Bacharach, on premises. Brick, general interior and exterior alterations, slag roof, brick work, millwork, partitions, electric wiring, plastering and plumbing. Architects have received bids.

Building (fire repairs), 514 North American street, Philadelphia. Architect, private plans. Owners, City of Philadelphia, City Hall, Philadelphia. Consists of interior alterations, mill work, plastering, painting. Owners have received bids.

Marine Barracks, Navy Yard, League Island, Philadelphia. Architects, Rankin, Kellogg & Crane, 1012 Walnut street, Philadelphia. Owners, U. S. Government, Bureau of Yards and Docks, F. R. Harris, Chief, Navy Department, Washington, D. C. Reinforced concrete, brick and stone, 3 and 3½ stories, 280x54 feet, three wings 48x39 feet, slate roof, asphalt and composition floors, steam heating, electric lighting, waterproofing, iron stairs, ornamental iron work, fire doors. Owners taking bids, due November 15th. Cramp & Co., Denckla Building; Warren-Moore & Co., Colonel Trust Building; W. W. Anstine Co., 1218 Filbert street; Wm. R. Dougherty, 1610 Sansom st.; Roydhouse-Arey Co., 112 North Broad street; McCloskey & Bahls, 1620 Thompson street, and Chas. McCaul Co., 1713 Sansom street, are figuring.

Office Building, Frankford Arsenal, Philadelphia. Architect, private plans. Owners, U. S. Government, care of Col. George Montgomery, Frankford Arsenal, Philadelphia. Frame, 2 stories, 75x40 feet, Ready roofing, vacuum heating, roof ventilators, waterproofing. Owner has received bids.

Dwellings (27), Pelmetto and Estaugh sts., Philadelphia. Architect, private plans. Owners, Finestone & Mittleman, 1014 East Tioga street, Philadelphia. Brick, 2 stories, 16x39 feet, slag roof, pine floors, hot water heating, combination lighting. Owners taking sub-bids.

Office, Stable and Shed, Tulip and Almond streets, Philadelphia. Architect, Maurice

Golden, Crozer Building, Chester, Pa. Owner, Joseph Hymen, 2859 Tulip street, Philadelphia. Brick and metal, 1 story, 16x26 feet, 16x30 feet and 57x24 feet, slag roof, pine and cement floors, electric lighting, metal lath. Owner has received bids.

Manufacturing Building (alts.), 846 North Eighth street, Philadelphia. Architect, J. Ethan Fieldstein, Hale Building, Philadelphia. Owner's name withheld. Brick, 3 stories, 50x100 feet, elevator, fire towers. Plans in progress.

Mill Building (add.), Thirtieth and Reed streets, Philadelphia. Architects, Andrew J. Sauer & Co., 908 Chestnut street, Philadelphia. Owners, Murphy & Bro., Sixteenth and Fitzwater streets, Philadelphia. Brick, 1 story, 100x35 feet, slag roof, lantern top skylights (plumbing, heating and electric lighting reserved). Owners are sub-letting all contracts.

Residence (alt. and add.), 4140 Leidy avenue, Philadelphia. Architect, J. Ethan Fieldstein, Hale Building, Philadelphia. Owner, A. Levin, 526 South Thirteenth street, Philadelphia. Brick, 1 story, slag roof, hardwood floors, electric lighting, tile work, plumbing. Plans completed. Owner taking bids.

Boiler House and Connecting Bridge, Thirty-first and Jefferson streets, Philadelphia. Architect, Charles H. Caspar, 925 Chestnut street, Philadelphia. Owners, F. A. Poth & Sons, Inc., on premises. Brick, concrete and steel, 2 stories, 50x41 feet, slag roof, concrete floors, kalamein doors. Engineer taking sub-bids in all lines.

Store and Service Building, 1821 Chestnut street, Philadelphia. Architect, Fred N. Greisler, Lafayette Building, Philadelphia. Owners, Willis-Winchester Co., 1001 Chestnut st., Philadelphia. It's the Long Fire Travel in the Burnham Cosy Comfort Boiler That Makes the Short Coal Bill

IF you can keep the hot gases and smoke travelling back and forth inside a boiler long enough to extract the bulk of their heat, and still not make the draft s-ugghs; it's plain enough that less heat will go up chimney and more heat go into your radiators.

That back and forth action is what we call fire travel. It's this long fire travel in the BURNHAM Cosy Comfort Boilers that has a lot to do with making their short coal bills.

CONVENIENCES IN POPULAR DEMAND

Prospective tenants and buyers want to know how they are going to keep warm in the chilly mornings and evenings of the early Fall and late Spring, when it isn't practical to have the furnace going.

If you can point to a Baseboard Gas Outlet in each room to which Gas Heating Stoves can be readily connected your Prospect is then assured of a quick, clean and economical method of getting the desired auxiliary heat.

HOW THE JAPANESE DRAW PLANS.

The Japanese draw their plans on one sheet of paper and then they fold it all down so that it is flat, says William A. Boring. When it is shown to the client, who has no imagination about mechanical drawing, the architect lifts up the side walls and puts the roof over the top. It is all drawn out and the client can look in the window and see the inside, or put it on the table and see what it looks like on the outside. It appeals to the imagination of people who are not educated to the building plan.

CONCRETE BRICK.

The announcement has been made of a new concrete brick just being placed on the market which is expected to have its effect on building. With this pressed, machine made concrete brick, comes, we are told, the first radical change in the making of brick since the earliest times. While the product has been refined and the process improved, the basic material has always been clay. Reduction in weight is one of the first advantages claimed, weighing approximately 4½ pounds as against the standard 6-pound clay or shale brick—a saving of 1,500 pounds per thousand of brick. When completely cured, the bricks are several shades lighter than the usual "concrete gray."

HOME MIXED ROOF PAINT.

A good roof paint may be mixed as follows: Use 3½ gallons of boiled linseed oil, the same quantity of raw linseed oil and to these 7 gallons of oil add 100 pounds of Venetian red or red lead in oil. Be sure to have no sediment and stir frequently. When using the

We Drill Wells and Get Water Test Borings and Soundings

RIDPATH & POTTER CO

587 Bourse Building
Philadelphia, Penna.

paint in cold weather and it thickens add a little turpentine to thin it. Mix smaller quantities in the same proportion.

If the roof has already been painted several times no preparatory treatment is necessary except to loosen all cracked paint with a putty knife, touch up these spots with paint and when dry paint the entire surface.

WISCONSIN TO LICENSE ARCHITECTS AFTER JANUARY 1, 1918.

The recently adjourned State legislature of Wisconsin passed an architects' registration law, similar to the registration law of New York," says the "American Contractor." It becomes effective January 1, 1918, on and after which date it provides that no person shall use the title "architect" in a business way, or in any way represent himself to be an architect, unless he has a certificate of registration.

The examining board is to consist of five members, including the state architect, the dean of the engineering college of the state university and three architects appointed by the Wisconsin Industrial Commission, the body which administers the State building code. The commission has already appointed the members of the examining board as follows: Architects Alfred C. Clas, Milwaukee; A. C. Eschweiler, Milwaukee; and Henry A. Moeller, Green Bay. The ex-officio members of the examining board are F. E. Furneause, of the engineering college, Madison, and Arthur Peabody, State architect, Madison.

Architect to Formulate Rules.

"This board is authorized to formulate the rules and regulations for the examination and registration of the architects. The applicant for license must present satisfactory evidence of a knowledge of sound construction, building hygiene, architectural history and mathematics, and, in addition, he must have had five years' experience in the practice of architecture. In lieu of the examination the board may accept the diploma of graduation from an architectural school of approved standard, followed by three years of experience in practice. Provision is also made to recognize registration obtained in another state having satisfactory standards. Any architects engaged in actual practice when the law was passed may receive a certificate without examination.

"The industrial board issues the certificates to those certified by the board of examiners. This commission may revoke a certificate for cause. The registration law does not bar from the designing of buildings all persons who do not acquire a certificate. They are only barred from using the title of 'architect.'"

THE TREATMENT OF THE PERGOLA.

In our day a pergola seems to be regarded as a sign of artistic enlightenment. It is new, it is fashionable, it is even becoming obvious. Like such things, it is full of danger, the danger inherent in all similar formal affairs and in the machinery of formal gardens in particular. The chief trouble with Americans in this connection is that they have gone into formal layouts backwards, not realizing that such things are produced and made reasonable by certain ordered conditions and a long devotion to the ritual of life, and that apart from such conditions the mere apparatus can make very fools of its proud possessors. A formal garden is a test. It requires a certain amount of character to live in one, and a pergola is in a sense a spiritual thermometer which will accurately try the savoir faire of the man who builds it. No man should build a pergola more rashly than he buys a title or subscribes to the "London Spectator." All of these things are precious contributors to distinction if such already exists within; they can all take their revenge if it be lacking entirely.

However debatable the morality of a pergola, its material form is simple. The basic idea is a continuous semi-sheltered walk, useful in southern countries, like Italy, where the sun is unpleasantly hot for long periods of the year; the nature of the houses makes outdoor life of some sort inevitable. The usual terrace treatment of gardens led to long lines where sheltered passing was desirable. Architectural treatment of these lines with piers or columns supporting a slight vine-covered structure, produced the pergola. The terrace of the Cappucini at Amalfi is a well-known example. Where the structure was less emphasized a pleached walk fulfilled the requirements, as at the Villa Gori in Siena. In Italy, however, the architectural form has always been more usual, as it apparently better satisfies the Italian instinct for form and

Our specialty is Portland Cement that will stick and pass the City Department. **DAVID FRANCE CO.,**
Tasker Street Wharf, Delaware River, Philadelphia.

regularity. This works itself out in purely utilitarian situations. The festoon-like training of Tuscan grape vines is as beautiful as *t* s practical.

American pergolas have developed somewhat away from their Italian prototypes. Besides semi-sheltered walks, the term is applied to arbors and partly roofed piazzas. Short pergolas, properly arbors, are set about formal gardens like outdoor scenery, and sometimes the vines are omitted altogether, so satisfactory do the posts and lintels seem to their designers. The exotic appearance of sawed beams has become a cult. People enjoy pergolas of this sort because, apart from picturesqueness, they have the obvious qualities of structure that our more elaborate buildings lack; this pleasure is that of a child in a house of blocks. But our arbors without shelter, and piles of beams and columns which merely look forlorn in winter snow and wind. It was not without reason that the Gothic pergola, the cloister, had a stone vault. The logic of that age met conditions of northern climate with a solid and irrefutable answer.

—"Architectural Record."

BUILDING PROSPECTS BRIGHT

Prospects for an improvement in building operations were never brighter than they are to-day, labors scarcity and high prices notwithstanding. There are, of course, two factors which practically control the building situation. First, the degree of activity in general manufacturing and trading. Second, those influences which tend especially to stimulate construction. In forming his outlook, therefore, the reader should first inquire regarding the volume of business as a whole. On this point, certainly, all indications are most favorable. Except in the actual regions of combat, war invariably results in an enormous amount of business. The present war has an unusually strong tendency in this direction, because it is essentially an industrial war, to a degree never before equalled in history.

Not one business man in ten here in the United States has yet realized the prodigious demands which will be made upon our facilities of production and distribution. The only limiting factors are workmen and materials.

Some idea of the rush of industry in coming months is given by the fact that within the space of thirty days over half a billion dollars of capital were involved in the chartering of new concerns in the United States. This surpasses even the record-breaking boom of 1916. It is simply inconceivable that this immense production now in view will not be accompanied by a proportionate degree of activity in the building trades.

This second point to consider is whether there are specific causes operating to give a particular impetus to building lines as distinguished from industrial and commercial activity in general.

In regard to residential building, there will very likely be considerable hesitation in high-grade propositions, at least while the fashion for economy is at its height. It must be remembered, however, that within the ensuing months many people will make more money than ever before in their lives and will be elevated into the class of property owners. Besides these newly wealthy patrons of building, there will be thousands of workmen raised to the position of home owners by the steadily advancing pay roll to labor.

Finally, there must necessarily be new plants and construction to handle the requirements of the half billion dollars of new industrial capital which is monthly added to the already stupendous total of business investment.

In the case of municipal, institutional or endowed projects, the outlook is far from clear at the present time. Many observers feel that this class of buildings will be permanently stagnant until the ending of war brings prices more attractive to our city fathers, trustees and boards of directors. Other observers, however, anticipate that no class of buildings can fail to feel the influence of expansion which is in the air. They point out, for example, that never before has the country been more in need of good commercial highways for relieving by motor truck transportation, the railroad systems which for the past twelve months have been literally swamped with traffic demands.

On the whole, the prospective situation in the building industry can be summarized as distinctly optimistic. Even though we disregard as problematical the impetus which may come from the requirement for government cantonments and camps, there still remains enough purely commercial factors to warrant sound confidence in the future of building during the period of the war.—"Realty."

WHO OPENS YOUR MAIL?

Who opens the mail in your office? This question applies more particularly to large manufacturers, wholesalers and retailers who get a large volume of mail which is opened by perhaps the office boy, but the idea back of the query applies to all business men that get mail.

Not long ago a manufacturer whose goods are nationally known lost an advertising opportunity worth thousands to him which was presented in a circular destroyed by the office

boy who opened the mail of the concern in question. On the other hand, the head of a Chicago publishing house, whose time is just as valuable as the manufacturer's, opens every piece of mail coming into his office. Several times he has congratulated himself that he does take the trouble every day to go through his mail.

He believes that clerks and office boys are not necessarily incompetent or careless, but that they can't attain the executive's point of view. For instance, a clerk can not know that an ordinary looking postal card noting a slight reduction in the price of a certain iron pipe might mean the saving of thousands of dollars to the manufacturer of plumbing supplies.

The way to the waste basket is easy for the circular or letter which falls into the hands of the office boy. The bump of destructiveness is usually very well developed in the young man who dusts your desk and fills your ink wells. Not only this, but his judgment is hardly to be relied upon. Give orders for the boy to bring all the morning's mail in to your desk, or to distribute it among your department heads—no matter how many bushels of mail there are. It is the only safe way, the only profitable way.—"The Glovers' Review" (Gloversville).

Are you aware, Mr. Advertiser, that this paper circulates in 5,000 offices, reaches every architect of any prominence in the East and the Secretary of every architectural club and chapter in the country?

REAL GOLD UNMINED.

"I am here as the self-appointed representative of 900 trade and technical publications printed in the United States and circulated wherever the English language is spoken. How important they are in their relation to advertising may be understood when I tell you that they carry, in the aggregate, advertising to the amount of at least \$25,000,000 a year—one-eighth of all the advertising money that is spent for all forms of publicity in the country—and that these advertisers 'stick' year after year because it pays them to stick.

I have bought, sold and written all kinds of advertising—pasted and printed, indoor and outdoor, consumer and dealer, technical and commercial—and I have reached the conclusion that there is more real gold as yet unmined in the trade press field than in any other field of advertising endeavor."—Extract from address by R. R. Shuman, before the annual convention of the Associated Advertising Clubs at Omaha.

As The Editor Sees It

THAT the opinion of THE GUIDE, to the effect that nothing of advantage is to be gained by deferring structural projects at this time, is not exclusively an Eastern view of the logic of the building situation, is attested by the appended article on the subject from the pages of *The Architect and Engineer of California*. Under the caption, "The Building Situation," the Pacific Coast magazine remarks:

"Said a noted English lecturer the other day in regard to business in England: 'The business firms which kept everlastingly at it' gained prestige which they have profited by ever since. They soon found that their policy was more than justified; for instead of 'business as usual' it became 'business unusual.' And America will find it just the same. In weeks, rather than months, you will get a great reaction and business will enjoy greater prosperity than has ever been known in your history."

"And that's exactly the situation we're going to have in this country. Building is feeling it already.

"Still there are some people who talk about waiting to build until 'normal' times and prices are restored. If such people don't need their buildings for four or five years, well and good; but they must not fondly hope for such restoration in less time. We hear talk about things being in a more stable basis in four or five months.

UTTERLY farcical. Even if war stops to-morrow, it will take two years to disband the European armies, while meantime, and for long afterward, there will be demands upon us for machinery, materials, even food, equal to those of the present. And at the same time our stocks have been depleted and running low, so that our own wants must be met. And those wants are not modest. Money coming into the country and prosperous times here will make those wants many.

"Even when normal times are restored, it will be a new normality. Never again will building prices be where they were two or three years ago, any more than will beef ever be as cheap as it was when vast herds of cattle roamed the free pastures of the West.

"Our natural products are more rare, harder to get; our manufactured ones more costly to produce. It is a new era. Besides, with as much gold as has come into the country, a new standard of values is established. When a commodity is abundant it is cheap; when money is plentiful, it buys less; and there you are.

"No, if a man needs a building at all, there is absolutely no sense in waiting. Now is the time to build!"

AND by way of endorsing my view that the operator is missing an active demand, by adhering to his illogical policy of waiting for material costs to recede, I am pleased to quote

from the news columns of the *Philadelphia Evening Bulletin* of October 31 the following:

"Philadelphia is facing one of the most acute shortages of small dwelling houses ever experienced, conditions being attributed to an abnormal demand brought about by the war.

"Among the sections most seriously affected are West Philadelphia, downtown and the north central district. Houses are easy to buy—if one has the money—but structures renting from \$15 to \$30 a month are found to be at a premium. When a 'To Let' sign is hung out it is not allowed to remain for long. Low and moderate priced apartments are just as scarce as houses.

"Real estate men in various sections all have their pet explanations for the condition. What seems to be the most popular is that war industries have boosted wages and many families whose former incomes required them to share houses with others, have moved into independent homes.

"The influx of war workers, including many negroes from the South, who are offered good employment at local and nearby munition plants, is said to be a contributing cause. The section bounded by Spring Garden street and Girard avenue and by Ninth and Thirteenth streets, one real estate dealer declared, is becoming essentially a colored neighborhood, and houses there are hard to secure.

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.

125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086 KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

IN the district between Pine and Spring Garden streets and Thirteenth street and the Schuylkill river there are many vacant houses to be rented. These houses, however, are for the most part large, bringing rentals of from \$60 to \$350 a month, and the throng of house seekers at the present time cannot afford to pay such high rents. Many of the people who formerly occupied these houses have moved to the suburbs.

"In the section between Spring Garden street and Girard avenue there are a few of these large houses vacant in neighborhoods that were once fashionable. Some of the houses of this sort have been turned into tenements, but many owners are reluctant to build fire escapes and make changes in compliance with tenement house regulations.

"It is just as hard to get at moderate rental houses downtown and even in outlying districts, such as Germantown, the diminished building activity of the past year is reported to be having an effect.

"When asked about this, the head of a large real estate firm said: 'Our statistics show that during the past year 2,000 houses were built in Philadelphia, while 10,000 were constructed during the previous year. Building material is costly, its delivery uncertain and for the past two years building contractors have refused to undertake a job on any other but a sliding scale, subject to changing prices of material, labor and deliveries.'

"Nearly every Philadelphia real estate agent has a waiting list, longer than ever before. Many of those contentedly occupying houses have been forced to move after the sale of their homes to families anxious to occupy them at once.

"The houses most in demand are the small two-story designs, renting from \$18 to \$25 per month.

"Larger houses, renting from \$35 to \$50 a month are also in limited demand."

And the operative builder still waits, hoping that by intervention of some now unforeseen miracle the condition brought about by advancing material costs, labor scarcity and higher wage rates will undergo a remedial transformation. It won't, of course, because the present is not an age of miracles. And in the meantime the operator who accepts conditions as they are and pushes ahead with his project is cleaning up.

THE opinion, widely held, that material costs would drop simultaneously with the fixing by the government of a basic price for coal and steel has failed to justify itself. Federal action in the case of steel and coal has been without effect upon other lines of material. As the result of a survey of conditions undertaken by a New York news bureau the following statement has been given publication:

"In every department save that of structural steel, the tendency is toward decidedly higher levels than now prevail, especially if there should develop any difficulty in obtaining adequate supplies of coal. In the structural steel department the Government's fixed price policy is the subject of still further negotiation at the present moment and it may apply to tubular goods, affecting pipe and plumbers' tubing. The building trade looks for \$86 steel in the building, but even this price is far above normal levels ruling in ante-war days. The difference between \$140 a ton steel to-day and possible \$86 a ton steel next spring or summer, as applied to the builder and his investment, according to the Beals report, is that between a prohibited building operation and one of which the margin is little or nothing unless there is some protection by legislation, insurance or subsidy to insure the stability of values until the investor has had time to turn around.

ONE cause of the higher prices that now seem assured in the next five to ten years is the claim that devastated Europe will make upon American building material resources. Among the results of the survey conducted by the subcommittee on the supply and demand for building materials, of which C. J. Curtin is chairman, is a comment from Otto M. Eidlitz, of Marc Eidlitz & Son, builders, who is a member of the National Defense Society's committee investigating the demand for workmen's homes in this country of which there is a very appreciable shortage, in which Mr. Eidlitz says:

"There is no doubt that we will undergo an era of readjustment. The present situation has not so seriously affected many classes of workers, who, due to war conditions, are getting higher wages than they ever did, but even with the demands that devastated Europe will make upon us for rehabilitating her in different ways, the present situation is caused chiefly because enormous quantities of so many kinds of material are needed for carrying on the war and consequently interfering with the normal demand for civic purposes. When you see gilt-edged securities virtually unsalable, where the revenue derived from them is far in excess of anything that could be derived from investments in building operations, we cannot wonder that building, except for war purposes for some special purposes, should virtually disappear."

"Investing builders are guided to-day by two conditions. If they proceed with contemplated building operations it is because they are assured of an immediate sale, or complete rental, as in the case of special buildings. Projected buildings have been deferred because the investors

felt sure that building material prices would go down as soon as steel declined. In only one department is there any indication of that being the case within the next five years or more. Their hope, therefore, is that some means may be found to so stabilize really values that it they do proceed with construction at the present high prices, their investment will have reasonable protection against any lowering of construction costs."

INDIAN ENGINEERING, Calcutta, advances the novel thought that participation by architects, from various parts of the world, in the war in Europe must inevitably exert a certain influence for the "cosmopolitanizing" of architectural style. Says the publication quoted:

"Let us look a little at what the war is compelling builders and architects to do. Has it not always been an axiom of the artistic world that to develop the art instinct the artist must travel? He must see the work of other countries, must compare it with what he finds in his own; he must bring back with him sketches of what he finds beautiful and appropriate, and in designing for his own country substitute or combine as his judgment dictates. In the years when architecture was a living art this was an essential part of the architect's education, and the best architects were invariably those that had enriched their knowledge with a liberal study of the art of foreign countries. With the great increase in numbers in the profession the proportion of those that have studied outside their own country has fallen greatly; they are content with the study of sketches and photographs now so freely circulated; the time and expense of foreign study are saved; the result is a cramping of the art. But what the profession had ceased to do for itself the war is doing for the profession. It has caught up the profession bodily and carried it out to fight in France, in Belgium, in Italy, in Greece, in the Balkans, in Turkey in Egypt, in Mesopotamia, even in India.

"Architects in great numbers have now observed some of the works of these countries and cannot have seen them without learning something from them. They have lived among these works, have experienced the climate and seen the atmosphere in which they exist, and so have learned at first hand the why and wherefore of their specialties. Such men must naturally return home with a greatly widened view of their profession; their education in the fitness and appropriateness of features in design must be very much extended; they are not likely to slip into incongruity; nor will they be blind to opportunities of introducing forms and features in their work that have impressed themselves on the mind

abroad but could not be so much as seen at home. It is they who must be looked to break down the barriers that have circumscribed the art of home, just as we look to seasoned soldiers to storm the trenches.

"Why do we not get beyond the eternal round of Renaissance in our public buildings, of a bastard Gothic in our ecclesiastical architecture, and of a modified medieval style in our domestic building? It is because we are hide-bound by convention and lack the courage to break through. Courage comes from conviction; those who have seen, have experienced, and been convinced of new possibilities in architecture may now take the lead, and as there has sprung up a strong feeling that the after-war world must be more cosmopolitan, so, let us hope, that same world will see some more cosmopolitanism in architecture. For, after all the truest definition of architecture is that it is an expression in form of a people's feeling."

* * *

BY way of combatting the indifferent, if not hostile attitude of the national government toward the architectural profession, the suggestion is made that the architect get into politics.

The following is a synopsis of an address on the subject delivered by President W. G. Malcomson, of the Michigan Society of Architects, at the annual meeting of the Illinois Society:

"A large measure of interest has been manifested, and considerable feeling has been justly aroused on the part of some intelligent and progressive members of our profession, in regard to the continued unfavorable attitude of our National Government toward the architectural profession—and the lack of proper governmental provision for suitably locating and wisely planning important national structures to insure the best permanent results, all things considered. Time need not be taken on such an occasion as this to state in detail the situation as it actually exists. You are all familiar with it. It may be assumed here that a statement to the effect that the present condition is deplorable would not meet with a single objection nor an attempt at contradiction in this assembly. Notwithstanding the fact that much effort and expense have been devoted to making known the unfortunate conditions, and also in evident well intentioned improvement of them, it must be conceded that not much concrete advance has been made toward a satisfactory remedy for some time past.

"The *Institute Journal* and other publications referred to therein have done yeoman service in the respective fields of illustrative and other enlightenment,

pointed critical comment and recommendatory advice, all of which cannot be too highly appreciated by the architectural profession. Thus far, however, to the interested onlooker, no substantial progress has been made toward a much desired improvement. The fact that so much thought, labor and expense has been productive of so little apparent result is suggestive. May it not be that the methods thus far practicable have conducted as much to provoke a degree of concerted opposition as to produce enlightenment, and that the well intentioned efforts to favorably educate the national statesman en masse has resulted in a measure of solidified antagonism (which condition if true, would not be entirely unassisted by a combination of selfish local capital interests)?

"May it not be possible that Washington might not be the best place, or at least that the legislative period not the best time, for effective ethical propaganda? Let me not be understood as in any sense criticizing the volume of valuable, painstaking work which has been accomplished, and which no doubt continues to be done; but, as related to, and based upon such necessary and fundamental accomplishment, it may not be out of place to offer a few suggestions of a practical

and constructive nature, by the adoption of which, through organizations such as this, Illinois and other State Societies, the valuable material data already prepared and the recorded work now made available by the devotion, industry and foresight of some, may be intelligently used toward accomplishment of the ends so much desired by all."

* * *

THERE is no doubt that a considerable wing of Congress and at least one or two department heads at Washington are inclined to minimize and belittle the importance of placing the design of federal structures in the hands of architects of the highest competency. Whether this attitude is due to plain ignorance or to the foolish but tenacious idea that the American Institute is "a trust" it is not easy to say. To whatever cause it may be attributable there is reason to believe that it may be made to yield to treatment. The question is what form this treatment should take. If getting the architect into politics is going to help, by all means let us get the architect into politics. Politics can't hurt the architect materially; it is not beyond the bounds of the possible that the architect may, on the other hand, help politics.

EDITORIAL NOTES

J. S. Cornell & Son, contractors and builders, have moved their offices to 1412 Morris Building, Philadelphia.

* * *

C. H. Zanzinger, of Zanzinger, Borie & Medary, Otis Building, Philadelphia, has been appointed by the State Department, Washington, D. C., to serve in the Diplomatic Corps. Mr. Zanzinger has sailed for Sweden, where he will take up his duties at once.

* * *

"During this time of abnormal conditions in nearly all industries it is necessary that we be guided by sound fundamentals in forming our conclusions as to the outlook for any particular branch of industry," says the "American Contractor." "In the building business as well as any other the law of supply and demand must ultimately control. This law cannot be set aside. Although war results in the upsetting of normal conditions, the law of supply and demand is still the governing power. The nature of the demand may change as it has changed since our entrance into the war, and naturally the supply will tend to follow the demand. The thing pertinent to remember is that a permanent depression in a given line of trade occurs when the demand is less than the supply—not when the demand is greater than the supply, as at present."

Local Chapters of the American Association of Engineers have been established in St. Paul, Indianapolis and Milwaukee. This makes a total of seven chapters which have been organized since the formation of the association, two years ago. The total enrollment of the association is now over 2,200 members.

* * *

Among the first to get orders to report at the officers' training camp at Fort Niagara was Walter A. Smith, son of Treasurer Smith, of the Philadelphia Master Builders' Exchange. He was also the youngest of those who received commissions. Young Smith was sent to the instruction camp at Anniston, Ala. He is a graduate of Notre Dame University.

* * *

American Radiator Company, it is reported, has been negotiating with the Government with a view of turning over its plant at Bayonne, N. J., for the manufacture of guns. It is stated that this plant is at present engaged in filling Government orders for naval guns. These orders, it is added, approximate \$3,000,000, and will take from six to eight months to complete.

* * *

The nature of the building demand has changed, but the supply of buildings is far short of the number required to meet this

changed demand. While high-class residential building is considerably curtailed, on the other hand factory buildings are needed in excess of the supply, and activity in this class of building is on the increase despite high prices, labor scarcity, transportation difficulties and every other deterrent factor. A study of the figures for industrial building projected during September in 1916 shows that this class of buildings has increased in nearly every section.

* * *

Hudson Boiler Manufacturing Co., New York, has received an order from the War Department for a large number of hot water heaters for use in the army cantonments.

* * *

Industrial building projected in New England was \$4,296,000 for September, as compared with \$3,899,000 for September, 1916; for New York State, \$5,110,000, as compared with \$2,580,000 in 1916; for northern New Jersey, \$1,670,000, as compared with \$887,000 in 1916; for Philadelphia, \$894,000, as compared with \$856,000; for the Central West, \$3,820,000, as compared with \$2,815,000 in 1916; for Cook County, \$4,160,000, as compared with \$1,655,000 in 1916. These statistics include only the construction of mills, factories and other purely industrial buildings. Government work is not included. While these are very significant of the trend of building under war conditions, we have as added testimony the reports of men engaged directly in the building business. In nearly every important center these reports mention the demand for factory space, which continues to outgrow the supply of new buildings.

* * *

Kewanee Boiler Co., Kewanee, Ill., it is stated, has received orders from the Government for heaters, boilers, tanks and garbage burners, approximating in value \$912,000, with the prospect of more orders to come. These supplies will be used in the army cantonments, officers' training stations, aviation camps, etc.

* * *

Even the fire losses for the first eight months of 1917 in the United States and Canada tell a story of the war, since the total of \$180,500,000, as compared with \$111,500,000 in 1916, represents the losses in oil and munitions works, here and in Canada, not necessarily of an accidental character. At the same time the figures are appalling and the amount in round figures represents a property waste beyond all reason. It is almost criminal for August, 1917, to show losses of \$21,750,000, as compared with \$10,780,000 for the same month in 1916, since, as all know, even allowing for war plots, most of these losses are due to preventable causes.

* * *

Ilg Electric Ventilating Co., Chicago, Ill., has organized its office and factory employees into a military company. Drills are held every day at noon in front of the company's plant at 154 Whiting street. A uniform style of working clothes has been adopted consisting of a khaki-colored oversuit.

Coatesville is to lose one of its experts through the resignation of Allen Hoffer, superintendent of blast furnaces for the Worth Brothers Company. The resignation is effective November 15, when Mr. Hoffer will become superintendent of four blast furnaces for the Cliffs Iron Company, of Cleveland, and will also be associated with the sales department of that company. Mr. Hoffer became superintendent of the Worth blast furnaces about three years ago, when there were two furnaces. A third furnace has recently been built. Mr. Hoffer is a native of Pottstown and was with the Eastern Steel Company in that town for eight years.

* * *

The McClintic-Marshall Construction Company is working four shifts day and night filling orders for 30,000 tons of structural steel, mostly for work at the United States navy yards, including material for the electrical and machine shops at League Island, an electrical shop at Brooklyn and a machine shop at Newport. All these orders will be filled by March.

* * *

Much dissatisfaction on the part of manufacturers all over the country, vigorous criticism from many intelligent sources and the possibility of official expression in Congress against the prevailing purchasing system in the War Department are developing as the result of a recent order by Secretary Baker concealing all information concerning the military supply needs of the army and the awarding of contracts for the filling of these needs. Under the Secretary's order it is impossible for the public or any portion thereof, including bidders on Government proposals, to learn where the hundreds of millions of dollars which the various branches of the War Department are spending is being spent. It is impossible to discover what firms have received army contracts and it is equally impossible to ascertain what contract prices happen to be.

* * *

Real estate men are interested in the fight over an uncharted island in the Delaware River off Hog Island, which may interfere with the issuing of permits to the American International Shipbuilding Corporation for the construction of shipbuilding ways on Hog Island. The shipbuilding company has an insured title for all the property, but the Arcadia & Clifton Heights Railroad, which is contesting the granting of the permits to the shipbuilding company, claims the uncharted island, and declares that it has filed, by a prior application with the Commissioners of Navigation, a permit to construct four piers on the contested ground. The railroad claims that it has a deed for the right of way in the uncharted island, which Frank M. Zeller, president of the road, claims to have discovered in 1905 and which he named New Providence Island. In 1909, he claims, he applied for a patent for the new island, and which he says was found vacant by the land department. The case is such an unusual one that

real estate men are awaiting the decision next Wednesday with great interest.

* * *

The twenty-sixth annual edition of Hendricks' Commercial Register of the United States for Buyers and Sellers, has just been issued. This standard publication is especially devoted to the interests of the architectural, contracting, electrical, engineering, hardware, iron, mechanical, mill, mining, quarrying, railroad, steel and kindred industries. Full lists are included of producers, manufacturers, dealers and consumers, listing all products, from the raw material to the finished article, together with the concerns handling these products, from the producer to the consumer. There are 2,209 pages of text matter and the index to trade classifications numbers 151 pages, covering over 50,000 trade references. The list of trade names, brands, titles of identification, etc., numbering 1,212 pages, furnishes ready reference to distinctive products manufactured by concerns listed in the work. The alphabetical section is included for the first time and contains in one alphabetical list the name, trade description and address of every concern appearing in the book. S. E. Hendricks Company, Inc., 2 West Thirteenth street, New York.

* * *

Marmaduke Tilden and J. Bartol Register, architects, with offices in the Presser Building, Philadelphia, have received commissions as First Lieutenants in the Signal Corps, Construction Division of the United States Army, and will leave for France in a few days. Their offices will be closed and all unfinished business looked after by Messrs. Bissell & Sinkler, Otis Building.

You can't achieve anything worth while, whether it's peddling pills or discovering uncharted rivers, without advertising. If Columbus hadn't gone back and kicked up a racket about it, nobody in the Old World would have known yet that he had discovered anything.

STUDY THE ADVERTISING PAGES.

The average reader does not pay very close attention to the advertising pages unless he happens to be particularly interested in some product or is in the market for equipment or material. He is missing a part of scientific literature which offers suggestions as practical as the reading pages. He is also losing an opportunity of studying a subject which bears the most important relationship to every business on earth. No matter what line of work you may be engaged in, a knowledge of publicity and salesmanship is valuable. Every form of occupation to be made successful depends upon a degree of salesmanship. Study the advertising pages. They represent an expenditure of time, thought and money, which makes them well worthy of your attention.—"Municipal Engineering."

Don't lose your grip. Noah was 600 years old before he knew how to build an ark.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Residences (57), 45 both sides of Newkirk street, between Allegheny and Hunting Park avenues, and 12 on Allegheny avenue, between Newkirk and Dover streets. Architect, private plans. Owner, Morris L. Miller, 1202 Commonwealth Building, Philadelphia. Stone foundations, brick, 2 stories, size of lots, 15x60 feet, slag roof, hot water heating, electric lighting, hardwood floors, plumbing, tile and marble work. Owner is taking sub-bids on all lines.

Elevated Stations (4), Torresdale and Kensington avenue and Tioga street and Kensington avenue, Philadelphia. Architects, Department of City Transit, Bourse Building, Philadelphia. Owners, City of Philadelphia, Department of City Transit, Wm. S. Twining, Director, Bourse Building, Philadelphia. If your proposition is one that should appeal to architects, builders, building owners, decorators, material and supply concerns, "The Builders' Guide" is the right medium for your advertising and cannot fail to bring you profitable returns.

PLACE AND VALUE OF THE TRADE PAPER.

"Eloquent speakers who have preceded me have told of the greatness of our American industries, and have rightly given to advertising a large measure of credit for our industrial and commercial supremacy.

They have spoken of the daily and weekly newspapers, the agricultural press, the magazines, the billboards, the street cars, and even the advertising novelties, as the forces that have played an important part in this wonderful upbuilding, but they have wholly missed the greatest force of them all—the trade and technical press of the country."—R. R. Shuman before the annual convention of the Associated Advertising Clubs at Omaha.

America's Largest Dye Plant Is Covered with Barrett Specification Roofs—

THE National Aniline & Chemical Company, Inc., is the biggest concern in the new American dye industry.

It has plants in various parts of the country and today is turning out dyes equal in every way to those formerly produced in Germany.

Its most important plant is the Schoellkopf Works located at Buffalo, N. Y., illustrated here-with.

This plant was designed and constructed by The John W. Cowper Company, one of the largest firms of engineers in this country, and it represents the very best in building construction.

Quite naturally Barrett Specification Roofs were chosen to cover the various buildings in preference to any other type because the experience of many years has

demonstrated that these roofs have a longer life than any other and cost less per year of service. The reasons for their long life are:

First,

because they are constructed of Barrett Specification Pitch and Felt, the greatest waterproofing materials known.

Second,

because a greater amount of waterproofing is used in Barrett Specification Roofs than in any other kind of roof-covering, and the amount of waterproofing material in the roof largely determines its life.

Third,

because under the 20-Year Guaranty Plan the roofs must be constructed under the supervision of our inspectors, and we know, therefore, that they will be constructed right.

In view of all this, do you wonder that Barrett Specification Roofs are more popular than any other type for use on permanent buildings of all kinds?

The 20-Year Guaranty Bond

We are now prepared to give a 20-Year Surety Bond on all Barrett Specification Roofs of fifty squares and over, in all towns in the United States and Canada with a population of 25,000 and over, and in smaller places where our *Inspect on Service* is available.

Our only requirements are that The Barrett Specification dated May 1, 1916, shall be strictly followed and that the roofing contractor shall be approved by us.

Copies of the Barrett 20-Year Specification, with roofing diagrams, mailed free on request.

This is the Bond that guarantees your roof for 20 years.

CONVENIENCES IN POPULAR DEMAND

Prospective tenants and buyers want to know how they are going to keep warm in the chilly mornings and evenings of the early Fall and late Spring, when it isn't practical to have the furnace going.

If you can point to a Baseboard Gas Outlet in each room to which Gas Heating Stoves can be readily connected your Prospect is then assured of a quick, clean and economical method of getting the desired auxiliary heat.

It's the Long Fire Travel in the Burnham Cosy Comfort Boiler That Makes the Short Coal Bill

IF you can keep the hot gases and smoke travelling back and forth inside a boiler long enough to extract the bulk of their heat, and still not make the draft sluggish; it's plain enough that less heat will go up chimney and more heat go into your radiators.

That back and forth action is what we call fire travel. It's this long fire travel in the BURNHAM Cosy Comfort Boilers that has a lot to do with making their short coal bills.

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

You Don't Waste Time and Energy

Chasing "FALSE ALARMS" when you use DAILY BUILDING NEWS. Every item is carefully verified BEFORE PUBLISHED—you receive all necessary details. It costs a trifle more than the "slush" building news in the daily newspapers, but—

IT'S WORTH THE DIFFERENCE.

If you don't know—at the psychological moment, who's building—you lose the job. We "put you next" before the news becomes common property. Let us show you, by samples, just how thorough, accurate, and timely is our—

Daily Building News Service

One small job pays for the service for an entire year. "Get wise" to a good thing. Address

As The Editor Sees It

ONE of the notable addresses at the recent convention of the Ohio State Association of Builders' Exchanges, was that delivered by Ralph P. Stoddard, secretary of the Ohio Builders' Supply Association, dealing with "Present and Prospective Cost of Building Material." Said Mr. Stoddard:

"It has been assigned to me to talk about costs of materials, present and prospective. That's just another way to introduce the subject of 'Build Now,' and to my mind it is almost a patriotic duty to boost for this movement that aims to keep conditions normal in the great building industry.

"People outside of the building business have not awakened to the fact that building construction is about the biggest single industry in the United States. In 1915 there was reported from 24 cities \$600,000,000 in new construction. This does not include the other millions spent in smaller towns and rural communities where records are not compiled. Neither does it include the road, bridge, sewer, sidewalk, underground and landscaping work that always go with city improvement and public allotments.

"Yet a banker said to me less than two weeks ago—'We have money to loan for business and industry, but none for building—we class building as extensions and we feel it our first duty to keep the going enterprises on their feet through these uncertain times.

THIS banker will loan money on stocks of goods, upon the stock certificates of manufacturing companies, because he has them classified as going industries. He can see the wheels go round and if appealed to by the merchant or manufacturer he will provide money to keep them moving. This condition, more than the price of building material, affects present conditions in the building industry.

"I am not going to say that conditions are not good—especially am I not going to say such a thing while in Akron where everything is running 'in high' with the accelerator wide open. I am told that there are thousands of people begging for homes, so we do not have to explain any slump here.

"There are similar conditions in Cleveland. Homes are being occupied before they are finished—that is literally true. One builder, who puts up from 100 to 150 homes a year, told me he never saw such a demand for homes. People move into a home as soon as one floor is finished and don't mind the carpenters and decorators going on with the work.

"Practically every live factory in that city is building a new plant or an addition, yet there is a prospect of a sharp falling off of building work during the winter unless the banks and building and loan associations resume construction loans. I am positive that the money stringency, not high prices of materials and labor, are responsible for any slack-

ing that may appear in the figures for the later months of the year.

* * *

NOW we will get down to the prices, because that is what the contractor wants to know about. He is a fiend for low prices—no matter how low they are he wants them lower, they tell me. As a matter of fact I believe that a lot of this talk about high prices and its killing effect upon business is 'indoor sports' on the part of the contractor. The fellows who talk of the high cost of material remind me of the Mississippi river steamboat Lincoln told about. It had a 5-foot boiler and a 7-foot whistle and when it blew the whistle it stopped the boat.

"Let us not waste any steam blowing about the high prices, instead boost the business by encouraging building. A single house that could be built in 1914 for \$3,000 can be built to-day for \$3,500 or less—the prices I mention are for brick and stucco. I am sure, however, that there is no greater difference in frame construction during the same period.

"In buildings using steel and concrete the increase is greater, as you know better than I do. But don't let the owner forget that the earning power of the building has increased correspondingly. In fact by what law could the prices of building materials be kept down while every other community in the country is increasing in cost?

**DRAWING
MATERIALS**

CHARLES H. ROBBINS, JR.
125 S. 11th Street, Philadelphia
BELL PHONE, WALNUT 1086 KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

YOU know that from 1914 to the present time there has been an increase of 133 per cent. on coal; 115 per cent. on copper; 350 per cent. on steel products; 100 per cent. on canned goods; 3 4 per cent. on all labor; 100 per cent. on woollens; 68 per cent. on machinery; 61 per cent. on horses; 83 per cent. on feed; 100 per cent. on lard, and as much on butter and eggs; 93 per cent. on wheat.

"You now get for a dime a loaf of bread you can put in your vest pocket. The principal crops are 104 per cent. up. The paper the merchant wraps your groceries in and on which your newspaper is printed has advanced 82 per cent. since 1914. Beans—always standing on the cheap lunch counter now are way up among the luxuries and 75 per cent. higher than you ever heard of them being before. Booze is 200 per cent. up and the glass you drink it out of has been raised 80 per cent. The gasoline for your flivver costs you 70 per cent. to 100 per cent. more than it did when common brick were \$7 a thousand. Corn is up 50 per cent.; pork chops, 100 per cent.; coffee, 36 per cent. A dollar at market attracts about as much attention as a boy scout would at Chillicothe; and still there's a panic because builders' supplies show an average increase of about 30 per cent. The labor increase in the past year has been large and this enters into building costs in two ways—it is the basis for nearly all the advance in materials as it is the biggest item in manufacturing costs and it comes to bat again in construction work.

* * *

THERE have been advances in Cleveland ranging from 15 per cent. in builders' trade wages. Did you ever consider that practically every material that goes into building, especially the fire resisting materials, come out of the ground? Clay costs nothing per ton until labor is employed to dig it out, haul it to a mill, grind it, mould it, dry it, bake it and load it into wagons or trucks to be drawn to a job. The man who stands in his tracks and picks a brick and places it in a wall gets more for it than the manufacturer got for making that brick and hauling it to the job. And the ingredient of cement came out of the ground and was mixed with labor to produce the finished article. The same is true of lime, gypsum, stone, sand and all other building materials. As labor goes up, goods must go up—the manufacturer is not to blame; the dealer certainly is helpless in the matter.

* * *

WILL prices be lower? Can they be reduced unless the manufacturing and handling costs are reduced? In my opinion, nothing

less than a general panic will bring them back to old levels. The law of supply and demand unquestionably is at work as usual. If the demand falls off so sharply that there is an over-supply there will be reductions. The same has been the condition and is to-day. Plants that have an output of hundreds of carloads a day have been able to ship only a few or two cars a day on account of empty car shortage. The plants have their books covered with orders. They are under the same overhead and operating cost that there would be if they were shipping their capacity. Do you think they will reduce prices under these conditions? With a million men going to war, will labor be cheaper? What ground have we to look for lower prices for anything? Even government regulation doesn't seem to make living cheaper.

"Let us face the condition as it exists—the world is at war—every condition is unusual—wages never were so high before in the history of the country—there are no idlers.

"Bank resources are at the highest figure known—16 billion in the June report. Deposits in National banks are 18 billion, an increase of 2 billions in a year. All along the line, new records in every department of banking. The cities are prospering as never before. Look at Akron. It has the atmosphere of a Western town of the early gold days—it's bursting with growth. It is the same to greater or less degree wherever there is manufacturing.

"Farms are prospering beyond their expectations, with big crops to cash in at the highest prices they ever drew.

"These conditions will last while the war lasts and then think of the rebuilding and the enormous demand abroad for all materials.

"Don't waste time thinking about high prices—compared with all other things, building prices are not high. Get that idea in your mind. Tell it to the fellow with money to invest—talk up—not down. Don't waste brain making a big noise that you ought to be using to go ahead with."

* * *

JUDGE LOVETT'S "priority order," issued recently, prohibiting mill shipment of certain building materials serves to still further complicate a muddled situation. This order was intended, it is supposed, to give a freight preference to coal, which constitutes about 35 per cent. of all freight carried by railroads and in the Eastern districts to about 43 per cent. of the gross tonnage. Dr. George Adam, of Montreal, pointed out in the course of a recent address that while we have undoubtedly made great progress in munition making it is a fact that we are fur-

nishing but 8 per cent. of the munitions used by the Allies and that Great Britain is supplying 50 per cent., although dependent extensively upon woman labor.

* * *

WAGES are reaching a point at which there can be no complaint that the skilled mechanic is not getting his hire. The rates paid in the building trades in three cities are as follows:

RATE PER HOUR.

Philadelphia, Pa.—Masons, 60c; Bricklayers, 70c; Structural Iron, 70c; Plasterers, 70c; Lathers, 62½-70c; Tile Setters, 65-70c; Plumbers, 56¼c; Steam Fitters, 56¼c; Carpenters, 60c; Stone Cutters, 60-65c; Painters, 45c; Roofers, 56¼-50c; Cement Finishers, 50-55c; Pipe Coverers, 53¼c; Laborers, 25-37¼c.

Providence, R. I.—Masons, 65c; Bricklayers, 70c; Structural Iron, 67½c; Plasterers, 71¼c; Lathers, 50c; Tile Setters, 70c; Plumbers, 65c; Steam Fitters, 50c; Carpenters, 60c; Stone Cutters, 65c; Painters, 50c; Roofers, 50c; Cement Finishers, 65c; Pipe Coverers, 50c; Laborers, 35c.

Hartford, Conn.—Masons, 75c; Bricklayers, 75c; Structural Iron, 68¼c; Plasterers, 75c; Lathers, 62½c; Tile Setters, 75c; Plumbers, 62½c; Steam Fitters, 62½c; Carpenters, 62½c; Stone Cutters, 65c; Painters, 65c; Roofers, 68¼c; Cement Finishers, 75c; Pipe Coverers, 62½c; Laborers, 37¼c.

THE GREATEST COUNTRY.

(From the Ohio State Journal.)

According to an exchange, "Judicious Advertising," the United States is the greatest country in the world, and here are the figures: This country has—

- Six per cent. of the world's area.
- Five per cent. of its population.
- Thirty-three per cent. of its wealth, and produces:
- Seventy-six per cent. of the corn grown in the world.
- Seventy per cent. of the cotton.
- Fifty-nine per cent. of the copper.
- Forty-three per cent. of the pig iron.
- Thirty-seven per cent. of the coal.
- Thirty-five per cent. of the tobacco.
- Twenty-six per cent. of the silver.
- Twenty-four per cent. of the wheat.
- Twenty-one per cent. of the gold.

This is not boasting; it is statistics, which simply show what we are and not what we pretend to be.

Do you get "The Guide" regularly? You should. Better subscribe now, while you think of it, and keep in touch. The man who fails to get and to read carefully the trade paper of his chosen line, is missing a while lot of valuable data that should be at his command.

EDITORIAL NOTES

A conference was held recently in the Association of Commerce rooms, Chicago, to consider the advisability of organizing several local committees, to determine the facts regarding the present depressed building situation and to discuss ways and means for co-operation among the units of the construction industry and with the National Government, during the war and the period immediately following.

* * *

The movement for the alleviation of stagnation in building which is on foot in Chicago, under the auspices of the Chicago Association of Commerce, similar in character to that of the Marks committee of New York, together with like movements under consideration in other large industrial centers, may lead to a National Construction Advisory Board to co-ordinate the efforts of the various trade organizations.

* * *

The convention of the Ohio State Association of Builders' Exchanges, held in Akron, elected the following officers: Scott Porter, Akron, president; R. L. Watson, Columbus, first vice-president; V. D. Wolf, Mansfield, second vice-president; David Burnett, Cincinnati, third vice-president; Edward A. Roberts, Cleveland, secretary-treasurer; Clarence Metters, Columbia, assistant secretary.

* * *

Secretary E. A. Roberts, of the Ohio State Association of Builders' Exchanges, has been secretary-treasurer of the Cleveland Builders' Exchange for the past seventeen years. When he took hold of it the Exchange had a membership not exceeding 100; it now has 450 active and interested members, working in complete harmony and close co-operation.

* * *

One of the questions which has recently been taken up by the Michigan Society of Architects is a uniform cost and accounting system. At the October meeting the committee appointed to consider this question reported progress. Inquiries have been made to the licensed architects throughout the States as to the methods employed by them in estimating costs and keeping records. The committee believes that the adoption of a uniform system would raise the standard of the profession in the State and tend to establish better prices for services rendered.

* * *

Aside from Government work and factory construction new building is decidedly less active than at this time last year, says the "American Contractor." There is a disposition to defer speculative building for various reasons. Some of these reasons are founded on unwarranted conclusions regarding the future, while others are in the nature of very real difficulties of the present situation. Among the latter may be mentioned the diversion of a tremendous amount of capital into

strictly war channels. This is becoming increasingly apparent as the nation bends every effort toward financing the greatest war ever known. Another very potent influence for hesitation in launching new projects is the uncertainty of obtaining the necessary materials within a reasonable period of time. This condition prevails more in some sections of the country than in others.

* * *

After the war Europe will be obliged to execute the enormous work of restoration. With her normal peace-time industries demoralized, as they are, she will be obliged to secure American products for restoring her devastated country, until European industries have had time to regain their normal production. Europe has been devoting all her manufacturing energy toward the making of war supplies, and has abandoned during the war, the making of materials for building. It will be America's part to supply these materials. This added drain upon our supply will, through the operation of the law of supply and demand, tend to keep prices up for a considerable period after the war.

* * *

The history of previous wars has been that shortly after hostilities ceased there came a peace "boom" in business. Commodity prices advanced in accordance with general business. The Napoleonic wars are probably more comparable to the present conflict than any others, because of their widespread destruction of property and because of the large number of nations involved. Industrial conditions have changed since that time, but in spite of this the same fundamental economic laws were in operation then as now. During the 20 years of the Napoleonic wars, beginning in 1793 and lasting until 1814 with intermittent breathing spells, the price of English commodities advanced almost 100 per cent. Although political and economic factors intervened to influence business and depress prices temporarily during this period, the general trend was toward higher levels.

Shortly after the defeat of Napoleon at Waterloo in 1815 and the cessation of hostilities, a temporary decline in prices was checked by an upward movement. Business activity improved throughout the year 1816 and 1817 and prices held up well until the close of 1818, or three years after the war had ceased.

* * *

Carelessness in the design of its small homes is the charge recently made against St. Paul by an architect of that city. He emphasizes the need of more attention to the artistic and beautiful in the construction of city homes, and particularly of the smaller residences. In spite of the fact that artistic design does not necessarily mean expensive construction, the majority of our small homes continue to be built along hit-or-miss lines.

This man says that travelers returning from

Europe invariably bring with them glowing descriptions of the attractive small homes occupied even by the poorer classes, particularly in the country districts of France and England, by the side of which the small American home makes a sorry showing.

This difference is explained by the fact that people of the working class in European countries are willing to live in a few larger rooms, and by omitting many of the furbelows demanded by those in a similar condition here, can afford good, substantial, artistic construction.

* * *

That better co-operation between builders and insurance men would work to the advantage of all concerned, would reduce risks and produce more satisfactory structures, is the opinion of Clarence S. Pellet, of Chicago, chairman of the Executive Committee of the National Association of Insurance Agents, who spoke before the Minnesota agents, assembled in annual convention in St. Paul.

"It is already quite an accepted custom," he said, "for a builder to take his plans to the local rating office, where in most cases the insurance rate can be set before work has been started. In this way suggestions as to changes which will reduce the rate can be acted upon without additional expense.

"Too often, however, an architect is confident that he has provided for all contingencies, and on his advice the conference with the insurance men is omitted," said Mr. Pellet. "As a consequence, when the time comes to fix the insurance rate, it may be higher than necessary, or expensive changes may be required.

"The insurance agent has a definite service which he can render, and the local underwriter, as well as the rating board, should be given an opportunity to assist the builder."

* * *

Statistics just compiled by the National Lumber Manufacturers' Association show that during the 12 months ending July 31 the mills reporting to the association cut 155,602,000 feet of lumber and shipped 15,741,000,000 feet, of 8.9 per cent. more than production. Shipments the first 7 months of this year were 7.7 per cent. more than last year, with no increase in cut. During July this year 732 mills in all parts of the country and operating in all kinds of timber, cut 1,389,000,000 feet and shipped 1,566,000,000 feet, or 12.7 per cent. more than production. The cut in July this year was 1.3 per cent. less than July last year, with shipments 19.6 per cent. greater. During the four weeks just closed 320 Southern and Western mills have cut 606,000,000 feet of lumber, shipped 778,000,000 feet and accepted orders for 613,000,000 feet.

* * *

The war needs of the Nation must come first. The industrial life of the Nation must proceed without being excessively hampered. Let's not tie a ball and chain to American enterprise, and say, "Stay quiet until the war is over." Which is preferable—a surplus of railway cars or a shortage? Which do we want—soup kitchens or a shortage of labor? Which

do we want—plenty of money in circulation, or do we want the money withdrawn from the arteries of trade and hidden away in safe deposit boxes?

Neither Paris nor Berlin has suspended building operations during the war. Why should we?—'Improvement Bulletin.'

Temporary scaffolds are responsible for an astonishing number of accidents. The fact that as a rule they are only to be used for a short space of time seems to be responsible in many cases for their being rather carelessly put together. Too great care cannot be exercised in erecting scaffolds. Only material in perfect condition should be used and before men are allowed to work upon any scaffold it should be thoroughly inspected and, if possible, tested in some manner in order to make sure that it is perfectly safe for men to work upon and that it will safely carry any load which may be imposed upon it.—'Accident Prevention Bulletin.'

The Aborn Steel Company is now occupying its new warehouse and office building at 22 Clark street, New York, where stocks of cold drawn and rolled steel products, shafting, drill rods, music wire, high-speed carbon tool and alloy steels, etc., will be carried. Branch offices are also maintained at Rochester, N. Y., and Philadelphia. J. T. Slingsby is president and treasurer; H. Ross Slinsby, vice-president; J. Ciegerich, secretary, and R. W. Pilger, assistant secretary of the company.

Louis J. Horowitz, president of the Thomp-

son-Starrett Company, of New York, has been appointed Director of Foreign Relief of the American Red Cross. Mr. Horowitz, who has volunteered to serve the Red Cross without compensation, will make his long experience available to the country in this way in acting as a connecting link between the American Red Cross Commission abroad and the organization in the United States.

D. J. Murphy, formerly in the New York sales office of the American Steel and Wire Company, has resigned to become manager of sales of the West Leechburg Steel Company, of Pittsburgh, in charge of New York and New England territory, and will have his offices at 50 Church street, New York.

Charles Proner has severed his connection with the Smith & Hemenway Company, tool manufacturers, at 261 Broad way, New York City, to join the staff of the Wales Advertising Company, 110 West Fortieth street. In his new position, Mr. Proner will continue to personally handle the advertising of Smith & Hemenway.

The Empire State Steel Products Company, Park Row Building, New York, has been reorganized to conduct a general business in iron and steel products, scrap iron and metals, rails, pipe and new and used machinery. M. D. Adelson is president; James P. Tounhill, vice-president and general manager; Robert G. Jeffery, secretary and treasurer, and Albert R. Bergstrom, assistant manager.

the greatest opening possible for ventilating purposes; when closed, it must have good weathering qualities without the use of weather strips; it must be easily opened and closed by those who must live with it; it must be so well designed and so substantially built that it will be largely depreciation-proof and capable of fulfilling its many functions for an indefinite period, with the minimum of attention and upkeep.

Prior to 1906 the Underwriters' rulings on fire retardant windows were largely arbitrary and based on assumptions rather than on known facts. But in 1906 a more definite standard was created, based on actual performances under the fire test. Without going too much into the detail of these Label Service tests, it may be said stand without failure, exposure for one hour in a gas combustion chamber at 1,800 degrees Fahr.; after which it must withstand the effects of a stream of water at 60 lbs. pressure from a ¾-inch nozzle.

Label Service deals with a window only as a fire retardant, and has nothing to do with its functions as a window. It is simply a guarantee that one window of the type purchased by a buyer has been approved by the Underwriters' Laboratory after certain fire retardant tests, and that every window of that same type which bears the label has been locally inspected and found to conform with the window tested, as to design, construction and weight of metal.

Each label has its individual number, which is recorded at Chicago, with the description and location of the window to which it is attached. And in case of failure of one of these windows, this record can be looked up and responsibility placed. The Label Service is an excellent thing, but by no means infallible. For instance, while it requires a construction giving

1-inch bearing for the glass, it leaves it to local inspectors to see that this demand is fulfilled. It is a safe guide to fire protection, because a window which cannot pass the tests of the Label Service cannot be considered as a dependable fire retardant. But while it is a guarantee of good fire retarding qualities, it is no guarantee of a good window.

It is to be regretted that there is no explicit definition of a fire retardant window. In a sense and up to a certain point, a window of slow-burning wood carrying wire glass is a fire retardant. Going up a little in quality, we come to the metal-kalameined (metal-covered wood) window with wire glass, which is still more of a fire retardant. Next in order comes the window of structural steel members carrying wire glass—also fire retardant up to a certain point. Last comes the hollow metal window with wire glass, which has proved to have a fire resistant of the other types.

WHAT "WINDOW EFFICIENCY" MEANS

Character of Window Work May Be a Deciding Factor in Sale of Building

By S. H. Pomeroy*

Fire prevention is not a question of getting something that is simply better than no protection at all. It is getting the utmost in the way of fire protection. And, in the case of fire retardant windows, that means wire glass carried in hollow metal sash and frames of sound and substantial construction.

Wire glass, with all its virtues, is effective as a fire barrier only so long as it is intact and in place. Then the window construction is seen in its proper light—not as a thing secondary to the glass, but as something of more importance even than the quality of the glass. Sash and frames must have a resistance to fire at least equal to that of the glass, if the window is to be considered as a fire retardant—which

statement determines what we may call the lower limit of window quality.

The efficient fire retardant window is both a window and a fire retardant, and that it must not fail of its functions as a window simply because it is a fire retardant—and vice versa.

As a fire retardant, the window must offer the maximum resistance to the passage of fire through the opening it protects; it must maintain this fire resistant quality up to the point of physical destruction; without being structurally weak, it must still permit a fireman, in emergency, to make a passage through it; it must be so devised or equipped as to close automatically, should the outbreak of a fire find it open; its hardware must be of a character and quality that it will not deteriorate with time.

Considered now as a window, this fire retardant must afford the largest possible percentage of lighting area; it must afford

*Excerpts of paper presented at the June, 1917, meeting of the New York Chapter of the National Fire Prevention Association.

Structural Steel Windows.

About the best that can be said of the slow-burning wood construction with wire glass is that it is better than a window of untreated wood carrying wire glass. Just how much better can be determined only when the adjuster fixes the damages—at which time the information is of little value to the one who bears the loss.

The metal-kalamein window goes a step further in its fire qualities. It is dependent for its mechanical strength upon the wood structure underlying the veneer of metal—and no one knows at any time just what the condition of that wood is.

The structural steel window deserves more serious consideration. There never was a better window made for the particular purposes for which it was originally intended, viz., to provide the maximum of lighting area in factory construction. This use of a lattice of light stock structural shapes carrying a multitude of small panes of plain glass, permitted a strong and durable construction to be made at a remarkably reasonable cost. And ventilation was easily provided by making a portion of this lattice work movable.

So successfully did this structural window fulfill the conditions for which it was designed that it really brought about a new form of factory construction in which the wall area is practically all window area. But, like a number of good things, it has been overdone and burdened with responsibilities for which it was never intended or adapted.

Substitution Not Effective.

Merely to substitute wire glass for plain glass in a structural window will not make it an effective and dependable fire retardant. True, it will be composed of non-burning materials; but it by no means follows that it will, as a unit structure, maintain its integrity under fire temperatures and fire streams.

Merely to substitute wire glass for plain glass in a structural window will not make it an effective and dependable fire retardant. True, it will be composed of non-burning materials; but it by no means follows that it will, as a unit structure, maintain its integrity under fire temperatures and fire streams.

The insurance rules require that the mullions between adjoining approved fire retardant windows shall be of heavy steel encased in a fire-proofing material. Contrast this, from the standpoint of safety and dependability, with the common practice in structural window work where great elevation areas are composed entirely of this flimsy steel-and-glass structure. There is, indeed, grave danger that over-enthusiasm on the merits of the structural window may lead to its use in such large areas that the safe relation between window space and pierage-and-curtain-wall space may be lost, and a building designed

which, when the windows fail under fire, will be not only gutted, but actually destroyed.

Furthermore, the structural window offers no opportunity for the passage of a fireman when necessity demands. Its movable portion is usually high up and out of reach. Its individual glass openings are too small to give passage to a man. And the metal structure is too solid for a fireman to smash an opening through with his axe.

The action of the hollow metal wire glass window, as a fire retardant, is that of a heat insulator preventing the transmission of a destructive heat from the fire-exposed side to the side not so exposed. Its dependability as a fire retardant rests upon two things, viz., its heat-insulating qualities, and its ability to maintain its physical integrity under the fire test.

The factors involved in the tests prescribed by the Underwriters' Laboratory to secure Label Service are: thickness of metal; method of securing members in place; provision for expansion and contraction; bearing of glass in sash; rigidity of structure in resistance to distortion under heat.

It will be evident from this that the insurance authorities concern themselves only with the fire protective properties of the window and that—so long as Laboratory requirements are satisfied—"any old thing" in the way of a window can pass. And this is most unfortunate.

It is commercially possible to make a fire retardant window that is to all practical intents perfect both as a fire barrier and as a window. But until recently it was quite impossible to sell a window—the market for it did not exist, except in the visions of the best window makers.

The obstacle which window manufacturers formerly encountered, that which delayed progress in window making, was the apathy of the architects and engineers and owners having to do with the specifications and purchase of fire retardant windows. To these benighted dwellers in darkness, all Label windows looked alike. So long as the Underwriters' Laboratory had taken responsibility for fire retardant quality, why worry about the merely incidental features of window quality?

And, be it sadly confessed, most window manufacturers acquiesced in this apathetic state of affairs, and made windows no better than they need be, to "get by." A few, however, had broader visions of window efficiency. And to-day manufacturers can furnish windows just as good as architects and engineers and owners are willing to pay for. And architects and engineers and owners are more and more recognizing the fact that there are degrees of quality in fire retardant windows as in other items of building equipment.

I cannot resist the temptation here to pay my respects to the practice of weather-

stripping. It is, beyond question, useful as a corrective to bad conditions already existing. But no greater mistake can be made than to install cheap or inefficient windows with the idea of weather-stripping them later. The fact is that the cost of a cheap window plus the cost of any effective weather strip is greater than the cost of a good window that will not need weather-stripping.

Let us, at this point, give a little further thought to the effect of window efficiency on the rental value of a building. For, of course, the ideal of every landlord is to keep his building filled with contented tenants, and to keep down the expense of operating and maintaining his building. Window efficiency is a big factor in all this, which architect or engineer is expected to consider in the plans and specifications.

As contributing to the contentment of tenants consider what we may call the "comfort capacity" of the windows. This covers: easy manipulation and freedom of opening and closing; silence, as contrasted with the rattle and squeak of poor construction; comparative dust-tightness, as contributing to cleanliness inside; comparative weather-tightness, as preventing coldness and draughts. Tenants appreciate these good qualities—are willing to pay for them—and will go where they can be had.

LESS MARBLE FROM ITALY.

Consul B. H. Carroll, located at Venice, Italy, reports to the Department of Commerce that the marble quarries of Italy have heretofore made large shipments of marble to the United States, but that shipments to this and other countries are diminishing because of high freight rates and "high customs duties." We are glad to know this. We have been sending about a million dollars a year to Italy to pay for marble, and went under that amount only after the war began. Mr. Carroll says that the wages of marble sawyers run from 558 to 68 cents and of finishers from 87 to 97 cents per day. Perhaps that accounts in part for the importation of Italian marble. At any rate, says an exchange, we are thoroughly convinced that anyone who wishes to buy marble "made in Italy" can afford to pay a stiff import duty. The Democratic administration cut the import duty a little—about 15 per cent.—but the war prevented our learning by experience just what the effect of that cut would be. In 1914, while the reduced rates were in effect, all building operations were at a standstill and people were not buying marble produced in either Italy or America. This is shown by the report of Secretary Redfield on the marble industries of Vermont. That report shows that the number of wage earners in the marble industry in that State increased 73 per cent. from 1899 to 1904, and 28 per cent. from 1904 to 1909, but fell off 13 per cent. in 1914 as compared with 1909.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Engine House and Machine Shop, Erie avenue yard, Philadelphia. Architect, Samuel T. Wagner, Reading Terminal, Philadelphia. Owners, Philadelphia and Reading Railway Co., Twelfth and Market streets, Philadelphia. Reinforced concrete, steel and brick, 1 story, 16 stalls, 200 feet circumference; machine shop, 1 story, 156x216 feet, J-M roof, cement and pine floors, rolled steel sash and skylights, fire doors, iron stairs, ornamental iron work, hollow tile, roof ventilators, waterproofing, stone foundations, wire work (heating and lighting reserved). Owners taking bids, due November 26th. Roydhouse-Arey Co., 112 N. Broad street; W. W. Anstine & Co., 1218 Filbert street; J. Sims Wilson Co., 1125 Brown street; F. W. Van Loon, Denckla Building; Wark-Yardley Co., 1237 Filbert street; E. A. Havens & Co., 845 North Nineteenth street; Irwin & Leighton, 126 North Twelfth street; A. L. Carhart, Hale Building; Wm. R. Dougherty, 1608 Sansom street; Standard Construction Co., 1713 Sansom street; H. E. Baton, 1713 Sansom street; Mitchell Bros., 2125 Race street, are figuring.

Sheds (2), Highland avenue, Chestnut Hill, Pa. Architect, Wm. H. Cookman, Broad Street Station, Philadelphia. Owners, Pennsylvania Railroad Co., Broad Street Station, Philadelphia. Frame, slate roof, plank floors, 350 feet each. Plans in progress. Owners will be ready for bids in about one month.

Stores and Apartments (7), 5301-03-05-07-09-11-13 Germantown avenue, Architect, I. W. Levin, 2434 South Eighth street, Philadelphia. Owners, Bashavsky & Winegrad, care of I. Seidman, 1324 South Fourth street, Philadelphia. Stone foundations, brick, 3 stories, 17x73 feet, slag roof, hot water heating, electric lighting, tile work, metal lath, hardwood, maple and composition floors, hollow metal skylights, tile work, flush bulks, ornamental iron work, roof ventilators, metal ceilings. Plans about completed. Owners, care of I. Seidman, will take sub-bids in a few days.

Store and Dwelling (alts. and add.), changing to club house southwest corner Sixth and Wilder streets, Philadelphia. Architect, I. W. Levin, 2434 South Eighth street, Philadelphia. Owners, Brotherhood of Carpenters, 1134 South Fifth street. Brick, 3 stories, 17x60 feet, consists of general alterations for club house, slag roof, hot water heating, electric lighting, marble work, fire escapes, maple floors, hollow tile, office partitions. Plans about completed. Owners will take bids in a few days.

Laboratory, Tacony, Philadelphia. Archi-

tect, Thos. B. Lippincott, 1505 Arch street, Philadelphia. Owners, Tacony Ordnance Corporation, Tacony, Philadelphia. Brick, stone foundations, 2 stories and basement, 25x32 feet, slag roof, steam heating, electric lighting, cement and wood floors. Plans in progress. Architect will take bids in a few days.

Time, Office and Dispensary Building, Tacony, Philadelphia. Architect, Thos. B. Lippincott, 1505 Arch street, Philadelphia. Owners, Tacony Ordnance Corporation, Tacony, Philadelphia. Brick, stone foundations, 1½ stories, 73x32 feet, slag roof, steam heating, electric lighting, tile work, cement and wood floors. Plans in progress. Architect will take bids in a few days.

Kiln and Lumber Shed, Venango and Penna. RR., Philadelphia. Architects, Ballinger & Perrot, Seventeenth and Arch streets, Philadelphia. Owners, A. Schoenut Co., Alams and Sepviva streets, Philadelphia. Brick, steel and concrete, 1 story, 41x58 feet; shed, 53x112 feet, slag roof, cement floors, rolled steel sash (electric lighting and sprinklers reserved). Architect taking new bids. Geo. Kessler Cont. Co., Drexel Building, and Philip Haibach Cont. Co., Twenty-sixth and Thompson streets, are figuring.

Warehouse (add.), 710-14 South Second st., Philadelphia. Architect, Frank E. Hahn, 1112 Chestnut street, Philadelphia. Owners, S. Sklaroff & Sons, on premises. Brick, steel and concrete, 6 stories, 22x100 feet, slag roof, steam heating, electric lighting, rolled steel sash, fire doors, concrete and composition floors, metal lath, waterproofing. Architect taking bids, due November 19th. Doyle & Co., 1519 Sansom street; H. E. Baton, 1713 Sansom street; Wm. R. Dougherty, 1610 Sansom street; Irwin & Leighton, 126 N. Twelfth street, are figuring.

Store, Apartment and Garage (alts.), Lindenwood and Market street. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, Wm. H. York, Fifty-third and Ludlow streets, Philadelphia. Brick, 2 stories, addition 10x16 feet, slag roof, cement floor, hot water heating, combination lighting, metal ceilings, and general changes from present store and apartments. Owners will sub-let.

Store and Dwelling, southeast corner Hancock and South streets, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin sts., Philadelphia. Owner, Alexander Lieberman, Widener Building, Philadelphia. Stone foundation, brick, 3 stories; 25x74 feet, slag roof,

yellow pine and hardwood floors, hot water heating, electric lighting, tile work, marble trimming, flush bulks, metal ceilings, metal lath, plate glass. Plans in progress. Owner will be ready for bids in about one week.

Garage, 1526-28-30 Passyunk avenue, Philadelphia. Architects, Milligan & Pierson, 520 Walnut street, Philadelphia. Owner, John Flaherty, care of architects. Brick, 1 story, 45x147 feet, slag roof, steam heating, electric lighting, cement floors. Plans completed. Architects will take bids in a few days.

Store Building, 1526-30 Vine street, Philadelphia. Architect, J. Ethan Fieldstein, Hale Building, Philadelphia. Owner, name withheld. Brick, 2 stories, 55x80 feet, slag roof, electric lighting. Architect has received bids.

Marine Barracks, Navy Yard, League Island, Philadelphia. Architects, Rankin, Kellogg & Crane, 1012 Walnut street, Philadelphia. Owners, U. S. Govt., Bureau of Yards & Docks, F. R. Harris, Chief, Navy Department, Washington, D. C. Reinforced concrete, brick and stone, 3 and 3½ stories, 280x54 feet, (3) wings, 48x39 feet, slate roof, asphalt and composition floors, steam heating, electric lighting, waterproofing, iron stairs, ornamental iron work, fire doors. Low bidders: Price Cont. Co., Baltimore, Md., \$227,000, time, 325 days; W. W. Anstine & Co., 1218 Filbert st., Philadelphia, \$237,314, time 360 days; Wm. R. Dougherty, 1610 Sansom street, Philadelphia, \$238,441, time 270 days.

Reservoir, Navy Yard, League Island, Philadelphia. Architect, private plans. Owners, U. S. Government, Bureau of Yards and Docks, F. R. Harris, Chief, Navy Department, Washington, D. C. Reinforced concrete and steel, 2,000,000 gallons capacity. Plans and specifications may be secured from Navy Yard, League Island, Philadelphia, or from Chief of Bureau, Washington, D. C. Owners ready for bids, due November 26th at 11 A. M.

Officers' Quarters and Fuse Shop, Frankford Arsenal, Philadelphia. Architect, private plans. Owners, U. S. Government, care of Col. Geo. Montgomery, Frankford Arsenal. Reinforced concrete, brick and stone, 3 stories, 57x19 feet, and 3 stories, 61x22 feet, slate roof, vacuum heating, electric lighting, tile work, rolled steel sash, hollow metal skylights, fire and kaamein doors, cement, oak and maple floors, metal lath, roof ventilators, stone foundations, waterproofing. Owners taking bids, due November 20th. Wm. R. Dougherty, 1610 Sansom street; W. W. Anstine Co., 1218 Filbert street, and Ketcham & McQuade, 1029 Brown street, are figuring.

*Resolution Adopted by Chamber of Commerce of the United
States in Convention at Atlantic City, September 21, 1917:*

WHEREAS, It is essential that all the transportation facilities of the nation should be brought to the highest state of efficiency in order that foodstuffs may be moved most economically from the farm to the market, that manufactured products be moved at the lowest cost from the factory to the consumer, and

WHEREAS, The Public Highways offer a good, prompt and economical means to supplement transportation by rail and water, therefore

BE IT RESOLVED, That the prompt improvement of our Public Highways is important and should be forwarded in every proper way.

Realizing the transportation congestion crisis, this was one of the most important resolutions passed by the Chamber of Commerce of the United States.

Motor trucks are ready at hand; the roads of the nation must be immediately developed and improved.

A Federal Highway Board is urgently needed.

This resolution deserves wide publicity—and to help we are publishing it throughout the country in place of our scheduled advertisements.

It's the Long Fire Travel in the Burnham Cosy Comfort Boiler That Makes the Short Coal Bill

IF you can keep the hot gases and smoke travelling back and forth inside a boiler long enough to extract the bulk of their heat, and still not make the draft sluggish; it's plain enough that less heat will go up chimney and more heat go into your radiators.

That back and forth action is what we call fire travel. It's this long fire travel in the BURNHAM Cosy Comfort Boilers that has a lot to do with making their short coal bills.

Our Engineering Department is at your service in solving Heating Problems

For every "one" man you can mention who has succeeded without advertising we'll agree to name ten whose greater success has been due to advertising "direct." Moral Advertiser!

The man who is "going to do some advertising next year—maybe" gets his advertising in the end in the shape of an obituary.

Learn to advertise. If you feel unequal to the task of preparing the kind of copy you ought to have, let us prepare it for you. Advertising is our business. We are always glad to help men who are honest enough to concede that they do not know it all. And the service won't cost you a penny if you contemplate joining the army of "Guide" advertisers.

A retailer may fool himself by failing to charge all of his expenses into his cost of doing business, but his expenses will come out of his gross profits just the same.—Ex.

We have pebbles all sizes. Cost less than what you are using. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

SUGGESTIONS ON PRACTICE.

The following report of the committee appointed to prepare recommendations to the National Association of Builders' Exchanges on ethical practice at the Atlantic convention in February, 1917, was submitted by Charles W. Bernhardt, chairman, Committee on Ethical Practice.

Report.

The purpose of these recommendations it is hoped will bring into general practice better co-operation, and the better understanding of relations toward each other. We therefore submit the following:

No. 1. We recommend that bids only be filed when a time and place has been set, and they are to be opened in the presence of bidders or their representatives; and shall be open to inspection by any contractor bidding on the work.

No. 2. When the general contractor places his bid with the architect, he shall also place a copy of the bid with the proper officer in the exchange or association to be opened and tabulated within one hour, after the set time.

No. 3. We recommend that at the time the general contractor submits his bid to the architect, the sub-contractors on the same work shall file with the proper officers at the exchange or association a copy of their bids, said bids shall be opened and tabulated within one hour, and shall be open to inspection by any sub-contractor bidding on that work, in its particular line.

No. 4. Sub-contractors should not submit estimates to general contractors unless invited to do so.

No. 5. We discourage the practice of making a deposit for the use of plans in making estimates.

No. 6. We recommend that all contracts be placed with and through the general contractor.

No. 7. We recommend the elimination of the preliminary bond and certified checks with bids.

No. 8. We recommend that the architect award the contract to the lowest bidder.

No. 9. Where bids are asked and no award is made, a compensation should be paid to the lowest bidder.

No. 10. We discourage the practice of contractors making preliminary plans for prospective builders.

No. 11. We discourage the practice of asking for alternate bids.

No. 12. We recommend the fullest publicity in the handling of our business.

ABSOLUTELY NECESSARY.

BEFORE A MAN BUILDS.

Is it true that the average individual who builds is more to be censured than pitied? And, if so, why? Offhand, this seems a radical and revolutionary precept: it reverses and supersedes the true and time-tried philosophy of the Save-me-child-melodrama, and the charity that stirs the heart sympathy for the erring. For, 'tis only human to err.

Perhaps that solves it, because, as may be recalled, "To err is human, to forgive divine," and when we view the well-known human race erring to-day in the business relationships of building as it erred last week, and last year, and on back beyond that for quite some time, it appears that a little less of forgiving syrup and a bit more corrective bitters is in order.

Mr. C. Matlack Price is largely responsible for the penning of the above and foregoing paragraphic vagaries. In his interesting volume, "The Practical Book of Architecture," is found this comment: "It is a strange and inexplicable circumstance that so many business men, punctilious to a degree in their every-day business dealings, and in the enforcement of system and routine in their offices, are flagrantly un-businesslike in their dealings with the architect."

"Perhaps no one thing is more important for the client to remember throughout the building of his house than the fact that, after engaging an architect, he has entered upon a business relationship, and that the more businesslike this relationship is kept the better for both parties.

"The building of a house, even a small house, calls for the expenditure of too much money on the one hand and too much skilled professional work on the other to be regarded as a 'mere transaction between friends.'"

Without energetic effort a man must remain in a rut and can never expect to share with his hustling, up-to-date competitor. Quoting the words of a gifted scribe: "Health attends the man who acts. Wisdom guides him. Hope frees him. Joy helps him. Power moves him. Progress marks him. Fame follows him. Wealth rewards him. Love chooses him. Fate obeys him. God blesses him. Immortality crowns him."

OLD MEN INSTEAD OF BOYS IN FACTORY WORK.

By E. I. Du Brul.

President, The Miller, Du Brul & N. Peters Manufacturing Co., Cincinnati, Ohio.

Beginning with January of this year, as it was extremely difficult to keep boys on certain work that was in the nature of "blind alley" jobs, to which there was no future and where the work was light, we began the employment of older men. The results have been so good that we want to pass the word along to all members of the Association, believing that great benefit will be derived from our experience.

The sort of work we are putting these men at is the kind that a boy soon tires of. It is not arduous, but requires steady application, and the monotony wears on the ordinary young boy of from sixteen to eighteen, and as the job has no future at all he very soon gets tired of it, no matter what rate of wages is paid. Therefore we decided that probably the use of men without a future, on these jobs without a future, would be more logical.

Through the free labor bureau operated jointly by the state and municipal authorities, we have gathered a force of elderly men, fifty years or more of age, practically all of whom had been unskilled workers in their younger days. They are physically sound but not strong enough to do hard work. Most of them are men who have been dependent on their families for support, and a chance to do work that will support them is greatly appreciated by them as well as their families.

Quite a number of such men can be found who are adaptable. They are serious, and the discipline in the departments using them is decidedly better than it was when we had boys on the job. Furthermore, as present day boys are very uncertain and irregular in their attendance as well as in the quantity of work they do during the day, we find a decided increase in output.

We really believe that manufacturers generally have gone to an extreme in confining such work heretofore to boy labor, and we find the old men are so much better that we never will go back to the employment of boys except in positions where the boy has a future and where the more vigorous type of employe is required.

We do not doubt that many a member of the Association is to-day overlooking an unsuspected source of labor supply, just as we did for years, and that for their own benefit, to say nothing of the good they do such men, it would be well for them to adopt a policy similar to ours whenever possible.

No one suffers from a mean disposition like the fellow who has one.

As The Editor Sees It

IN the face of general concurrence in the proposition that structural steel is going to be an uncertain quantity for some time to come, architects are beginning to figure the possibilities of meeting existing demands with structural types in which the steel frame is not an integral necessity. Discussing given phases of this subject in a recent number of the *New York Real Estate Record*, Mr. H. H. Murdock, of the architectural firm of Jardine, Hill & Murdock, writes:

"At a time when building materials are at a higher level than formerly, and one's calculations, based on previous standards of cost of construction, are upset, it is interesting and instructive to figure out what means can be employed to offset these higher prices of materials by substituting other methods of construction.

"An analysis of the cost of a large, high-grade loft and show-room building, built in the usual fireproof fashion, with structural steel frame and brick enclosing walls, with limestone for the lower three stories and terra cotta for the upper two stories, shows that if this building were duplicated to-day exactly as it was built in 1915-1916, the increase in cost would be approximately 40%; based on structural steel costing \$100 per ton erected. This analysis also shows that if structural steel could be procured at what it cost in 1915-1916 that the increase in cost, if the building were duplicated, would be approximately 21%. In other words, the rise in cost of struc-

tural steel erected represents approximately one-half of the total increase. Here, then, we have a good opportunity to study the possible substitutes.

"Formerly cast iron was used almost universally for columns and with good results. There have been very few, if any, cases of failures and even in a fire cast iron has stood the test, if properly fireproofed. The usual construction formerly was cast iron columns and steel or iron beams and independent walls. Many of our older office buildings are constructed in this way.

* * *

THE use of reinforced concrete has been growing more general. It has practically supplanted mill construction. It is used even in fireproof structural steel frame buildings to a greater or less extent. For floor construction the usual construction is reinforced concrete or terra cotta blocks or a combination of reinforced concrete and block. It has been used with satisfactory results, not only for the floor slabs, but for beams and girders with structural steel or cast-iron columns. The interesting question is how much further can the use of reinforced concrete go toward reduction in cost of building.

"To ascertain what the difference in cost would be at to-day's prices between structural steel and reinforced concrete for the frame work and rough floor construction only, an analysis has been made, using the known costs of a ten-story, high-grade loft and office build-

ing now being erected. This building has approximately 11,000 sq. ft. per floor, with regular column spacing, and throughout 120 pounds per square foot live load.

* * *

THE counterpart of the steel frame and rough floor construction, maintaining the same column spacing and height of stories, has been estimated in reinforced concrete. No attention has been given to the walls, plastering, finished floors, mechanical equipment, etc., it being desired to make the comparison on the main frame work and rough construction only. Every consideration has been given, however, to be sure that if the building were duplicated in reinforced concrete construction the same architectural results would be obtained. Manifestly, if liberties were taken in order to make use of adopted standards simply to cut the cost the comparison would be of no value.

"This comparison shows a considerable saving in favor of the reinforced concrete frame work over structural steel at to-day's prices, i. e., assuming steel at \$100 per ton erected. It shows that at to-day's prices of cement and bars that the reinforced concrete frame can be built as cheaply as structural steel frame, even if the price of structural steel should drop to \$.70 per ton erected, not to mention the fact that if structural steel dropped to this price reinforcing bars would also undoubtedly drop, too, giving

**BLUE
PRINTS**

the reinforced concrete frame a still further advantage.

"The cost of reinforced concrete frame and rough floors of this particular building would be \$149,000, against a total of \$190,000 for structural steel and rough concrete floors, with structural steel figured at \$100 per ton erected, a saving of \$41,000 at present market prices."

* * *

IT must not be assumed that this same saying would work out on every building. To show the best comparative results floor area should be large, column spacing regular and the height not exceeding ten or twelve stories. On two or three, or even five or six, story buildings, the familiar wall bearing construction, with perhaps reinforced concrete girders and beams and cast iron or steel columns, will probably figure out more economically than all reinforced concrete. Apartment houses that are likely to have irregular column spacing and light floor loads will not, as a rule, show a saving in reinforced concrete.

"Every one is familiar with the large reinforced concrete buildings that have been built in Brooklyn, Long Island City and the Bronx, and a visit to other cities impresses one with the larger use that is made of reinforced concrete for loft and show-room buildings and often for office buildings and hotels. For some reason there is an absence of such buildings of reinforced concrete on Manhattan Island. This may be due to the fact that the large buildings have been too high to build in reinforced concrete. It may be that the loaning institutions have hesitated to make loans on reinforced concrete buildings for fear they may collapse. It may be that the Building Code was not favorable to this type of construction. (Since October 6, 1915, article 16 of the Building Code has been in effect, setting forth the present requirements for reinforced concrete.) And it may be that no one has thought of the substitution or partial substitutions."

* * *

IT is unquestionably true that there has been a natural hesitancy to use reinforced concrete because of failures that have occurred just as there are still people who are opposed to sprinkler systems for fear of an unexpected—perhaps they would say expected—shower. These same people, however, more than likely have their offices in buildings with reinforced concrete floor construction and stand beside their safes with no thought of a hurried trip to the basement. If the prejudice against using reinforced concrete horizontally has been overcome, why should a similar prejudice remain against using it vertically?

"On any proposed building of the general type suggested above, which can be suitably constructed of reinforced concrete, it would pay, at to-day's prices, to have it figured both ways. To accomplish this it is essential to have plans worked out for each type of construction, and no one should allow himself to be persuaded that this is not necessary."

"The purpose of this article is not to boom reinforced concrete, but only to point out wherein savings by substitution of materials may be made. Undoubtedly this comparison could be carried further and, in other items in a building, savings shown by using reinforced concrete in place of brick, etc. Consideration must also necessarily be given to column sizes and depth of girders and beams as to whether the reinforced concrete requires heightening of the building and reduction of floor space."

* * *

ON the floor construction itself it is possible and, in fact, common practice to use monolithic slab construction, that is, casting the rough slab and applying the finished wearing surface directly to it, instead of introducing the usual cinder fill on a cushion under the wearing surface. While this does not provide a space to receive piping and conduits, these can be cast into the slab. The saving in this monolithic construction is quite an item.

"The possibilities of a combination of materials offer plenty of opportunity for savings, especially along the line of use of cast iron for interior columns and reinforced concrete exterior columns and walls. These uses can only be suggested here, but were an architect to approach a given problem with an open mind unprejudiced against cast iron or reinforced concrete unquestionably economical adaptations could be worked out."

"Consideration can also well be given to the obtaining of materials as well as their cost. Delays cost money. If cement, gravel and bars can be obtained promptly and structural fabricated steel cannot, this is an important item to take into account."

"Progress is continually being made toward improvement of building materials and methods, and in the substitution of materials and construction to reduce the cost of building. At this time with the changes that have taken place in the prices of materials relatively, and on account of the price and scarcity of labor, especially unskilled labor, there is greater opportunity than ever for constructive work along the line of substituting other types of construction and materials, and especially by the introduction in every branch of labor saving methods."

I HAVE quoted at some length from Mr. Murdock's article, because the subject is one that, to my mind, is of paramount importance in the present crisis. Buildings we must have to meet the normal and extra-normal demands of industrial expansion growing out of war conditions. If structural steel may not be had it is obviously the logical thing to turn to some substitute type of building from which structural steel may be omitted. Whether this is to be slow-burning construction, reinforced concrete or some new combination as yet undiscovered, it is up to the ingenuity of the architect to determine. We have the utmost faith that, granted the necessary stimulus, the American inventive faculty will find a way to overcome such obstacles as are now asserting themselves.

* * *

JOHAN N. MCGARVEY, a well-known West Philadelphia operative builder, is putting up a block of three-story, individual garage homes, on Forty-fifth street at Baltimore avenue. The houses are of a better type than the average operative dwelling, contain two baths and inclosed porches and sell at a figure just beyond the means of the average investment home buyer. Although the houses are not yet completed nearly half of the block has been sold. I am making this little reference to the fact to bring into relief two outstanding points that I feel should come in for especial emphasis in this season of gloom and pessimism in the building trades. One of the two points is that it pays, now as always, to build a good type of house; the other, that operative dwellings may be built, as readily, to-day, as two years ago, and sold perhaps with a trifle less of effort. The moral would seem to be that the operative builder who is holding back in the hope of easier conditions missing an opportunity.

* * *

YOU have noticed, I amagine, the custom more or less popular among architects of employing in inscriptions upon buildings, monuments and similar works, the letter V as a substitute for U. *Printers' Ink*, the spicy, little New York advertising magazine, pokes some good-natured fun at the custom in the following verses:

Why do some modern architects assume
that U is V,
And carve in stone that palpable and
bold absvrdity?
Now that we possess the U with soft
and gracefvl crvve,
Of vnexcelled docility and willingness to
serve;
Why do they carve *United States* and
Public School and svch
And make the English language look as
fvnny as the Dvutch;

With *Restaurant and Pullman Car and University*,
And other marks of educational perversity;
That V impresses some of vs as cheap
and gaudy stuff,
Which parvenies may pvll in place of
more svbstantial stuff;
Bvt people who are fashioned ovt of vn-
pretentions dvst
View all svch affection with an vnas-
svmed disgvst,
Svch exhibitions always make vs glvm
and sore and blve.
Now honest Injvn, don't they have the
same effect on yov?

A RCHITECTURE AND BUILD-
ING, the New York magazine,
of which the late Theodore Star-

rett was for many years the chief contributing editor has this brief but eloquent tribute to his memory in the October number:

"To those who were fortunate enough to have enjoyed the companionship of Theodore Starrett, to have known him in his varying moods and to have appreciated his brilliant mentality and many talents, the shock of his death is an enduring one. Seldom in a lifetime is it given to one to know ntimately a man of such attainment. His career was one of action and vast production and there are great monuments to proclaim his energy."

Architecture and Building promises an extended appreciation of Theodore Starrett and his work to appear in an early issue.

Chicago Cement Machinery and Building Material Show will be held in the Coliseum, Chicago, February 6-13. The show will be held under the auspices of the National Exhibition Co., 123 Madison street, Chicago.

A. J. Neff, who has had about eighteen years' experience in the operation, maintenance and construction of public utilities, has recently become a member of the engineering force of the General Engineering and Management Corporation, New York City, as efficiency engineer. Mr. Neff has devoted the last four years to efficiency work, having been efficiency engineer for the American Public Service Company, operating properties in Texas and Oklahoma, for the last two years. He also had charge of all improvements and construction pertaining to the power plants for this company the last year.

* * *

American Wire Fabrics Company, Chicago, Ill., has opened an Eastern office at 160 Broadway, New York, in charge of Thomas E. Richards, who was formerly in charge of the local office of the New Jersey Wire Cloth Company, of Trenton, N. J.

* * *

George T. Fonda, safety engineer for the Bethlehem Steel Company, at South Bethlehem, Pa., has been appointed director of labor and safety of all the plants of the company.

* * *

Empire Veneer Company, 14 East Jackson Boulevard, Chicago, Ill., has opened a New York office in the Marbridge Building, 47 West Thirty-fourth street. Victor H. Mendler is in charge.

* * *

C. J. Weller is now representing the Graff Furnace Company, of New York City, and Union Radiator Company in Newark, N. J., with headquarters at 44 Hazlewood avenue, Newark.

* * *

T. B. Shertzer has become affiliated with the Hydrated Lime Bureau of the National Lime Manufacturers' Association in the capacity of Eastern District Engineer, with headquarters in New York.

* * *

Department of Architecture of the University of Washington, Seattle, desires to obtain catalogues of building materials. Please address communications to Carl F. Gould, head of the department.

* * *

T. H. Letson, formerly New York manager for the American Hoist and Derrick Company, has opened an office for the sale of hoisting, power and general contractors' equipment at 50 Church street.

* * *

James P. McNichol, one of Philadelphia's leading contractors, head of the firm of D. J. McNichol & Bro., the Keystone Construction Company and other widely known contracting concerns, died suddenly of heart failure last week. Mr. McNichol, who was a member of the State Senate, was the builder of Philadelphia's Filtration Plant, the Market Street Subway and other large engineering works.

EDITORIAL NOTES

George B. Post & Sons, architects, and Ernest P. Goodrich, engineer, have recently announced their association in the practice of architecture, engineering and city planning. The architectural force is represented by Wm. S. Post, J. Otis Post and George B. Ford, with offices at 101 Park avenue, and the engineering force by Ernest P. Goodrich and A. Pearson Hoover, with offices at 261 Broadway, New York.

* * *

The National Paving Brick Manufacturers Association held its annual meeting in Cleveland, Ohio, November 19 and 20.

* * *

The Youmans Electric Company, Inc., electric contractors, 45 Main street, Yonkers, N. Y., announce their entrance into the New York City field and have just opened offices at 17 West Forty-second street. They have a very capable staff and are very desirous of furnishing estimates to New York architects.

* * *

The Electrical Supply Jobbers' Association held its semi-annual meeting at the Hotel Cincinnati, Cincinnati, O., November 13-15.

* * *

The firm of Buchman & Fox, well known for many years in the practice of architecture, has been dissolved and a new co-partnership formed under the name of Buchman & Kahn, the partners being Albert Buchman and Ely Jacques Kahn. John M. Montfort is associated with the firm as general manager and the business is being conducted at the former offices, 30 East Forty-second street, New York City.

* * *

The American Society of Mechanical Engineers will hold its annual meeting at the Engineering Societies Building, New York City, December 4-7, 1917.

* * *

The new partnership known as Frainie Brothers & Haigley is engaged in the busi-

ness of builders and general contractors with offices at 18 Clay street, Baltimore, Md. The members of this partnership, Frank H. Frainie, Charles R. Frainie and Walter Leo Haigley, were formerly associated with the firm of Edward Brady & Son. With the retirement from that firm of Frank P. Brady the new partnership was organized.

* * *

The North Carolina Pine Association held its meeting in the North Carolina Pine Bungalow, Grand Central Terminal, New York City, Tuesday, November 22.

* * *

An invitation is extended to American sculptors to enter the competition for the monument to General Maximo Gomez, upon which the government of Cuba is planning to spend \$175,000. Proposals will be received up to noon of March 31, 1918. First prize, \$10,000; second prize, \$5,000; third prize, \$2,000. Brochures giving 'complete' details, illustrations, plans, etc., may be obtained by competitors at the Consulate General of Cuba, 44 Whitehall street, New York.

* * *

The Paint Manufacturers' Association of the United States held its convention at the Blackstone Hotel, Chicago, Ill., November 15 and 16. George B. Heckel, 636 The Bourse, Philadelphia, is the secretary.

* * *

Roy B. Woolley, formerly sales and advertising manager Standard Electric Stove Company, Toledo, and late of the American Ambulance Field Service at the Verdun front in France, having served his enlistment, has returned to America. He is now with the Society for Electrical Development, New York, as an executive in its advertising department. Mr. Woolley was with the McManus-Kelley Advertising Agency for some years, and is well known in advertising and electric circles.

Pennsylvania and Atlantic Seaboard Hardware Association and the New York State Retail Hardware Association will hold a joint annual convention and exhibition in New York City, February 12, 13, 14, 15, 1918. Headquarters at the Hotel Astor.

* * *

Newman-Cavallon Co., Inc., 8 West Fortieth street, New York, announce the opening of its new plant at Bayonne, N. J. This factory, covering an area of approximately 40,000 square feet, is equipped with the latest machinery for the manufacture of concrete hardener and is capable of turning out about 8,000,000 pounds of finished product a year.

* * *

Prominent among the noteworthy Governmental contracts awarded this week were the five groups of barracks, mess halls, latrines, etc., to be erected at various army posts in the Metropolitan district. These contracts were all obtained by the Turner Construction Company, 244 Madison avenue, Manhattan. An unusual feature in connection with these awards is the fact that while the Turner Construction Company has for years been a specialist in the erection of reinforced concrete structures, these contracts involve only one and two-story frame buildings, and demonstrates conclusively to what extent prominent building contractors are willing to co-operate with the Government at the expense of personal interests. The projects include groups at Sandy Hook, N. J., costing \$400,000; Fort Hamilton, N. Y., \$160,000; Fort Totten, N. Y., \$100,000; Rockaway Beach, L. I., \$20,000; Fort Schuyler, N. Y., \$20,000. All of these buildings will be erected by the United States Government, General I. W. Littell, Construction Quartermaster, from plans prepared by Major F. B. Wheaton, Washington, D. C., advisory architect.

* * *

Bay Ridge Specialty Company, Brooklyn and Trenton, N. J., manufacturers of bath room fixtures, has acquired the plant of the Royal Rubber Company, on Stokes avenue, which it will equip for manufacturing. A one-story building will also be erected. J. O. Hunt, 114 North Montgomery street, Trenton, N. J., is the architect.

* * *

During the past week the Detroit Board of Commerce considered starting a "Boost Building" movement similar to that inaugurated in New York and taken up subsequently in Chicago. The Board of Directors met on Friday and referred the matter to their Industrial Division, which will carry on the movement by organizing committees representative of all interests in the city of Detroit.

Allen Pendleton, president of the Board, and Stephen Hoyt, its vice-president, expressed their interest and desire that Detroit should take its place with other prominent cities in the consideration of matters having so great a bearing on the common welfare of the units of the building industry, and in furthering the efforts of this industry to aid in the national defense.

R. J. Morgan has been appointed supervisor of sales for the American Steel Export Company, New York. Mr. Morgan formerly was connected with the Midvale Steel and Ordnance Company. Prior to his association with the Midvale Company he was connected for thirteen years with the Carnegie Steel Company.

* * *

Republic Iron and Steel Company has opened an office in the Munsey Building, Washington, D. C., in charge of W. H. Oliver, Philadelphia manager of sales.

TO REVIVE BUILDING.

That the building situation is acute and is in need of readjustment is acknowledged by all who are in touch with present-day conditions. The increased cost of producing a structure has reached such a point that the market, so far as private and speculative work is concerned, is practically stagnant. Times have changed. Former prices can no longer hold good, and the sooner it is realized that a higher level has been reached and provisions made along these lines the better for the entire community. Even were the war to terminate within a short time, it is doubtful whether former prices would maintain until Europe was rebuilt.

A movement was recently inaugurated through Elliott Smith, President of the Building Material Exchange, having as its object the finding of a solution to better the present difficulties which beset the building field. At a meeting last Tuesday, in the offices of the President of the Borough of Manhattan, the recently appointed Committee of the Whole, which comprises leaders in various lines affiliated with the building industry, took action, and appointed five sub-committees, which will investigate and report on the following phases of the situation: (1) whether a demand for new buildings exists, and to what extent; (2) supply and price of building materials; (3) supply and price of labor; (4) the money situation, and (5) legislation. It is proposed that these committees make independent investigations and report regularly to the Committee of the Whole for final action.

The movement is a good one, and deserves the support of all interested in the present and future growth of the city. There is every reason to believe that it will not be confined to the local field alone, but because of its national importance, will be expanded until the principal municipalities throughout the country will be included within its scope.

That the movement is sincere is guaranteed by the personnel of those who are its supporters. The policy is not of the "star chamber" variety, but is open, and views of those in touch with the market are eagerly sought after so that a true and equitable solution may be reached. This policy is a correct and proper one, and should do much toward making the movement a success.

The question is an exhaustive one, for there

are many angles from which it must be considered. Buildings cannot be satisfactorily erected unless the returns show a profitable investment. Were any other premises taken, sooner or later would come a crash which would be felt throughout the country. The old order of things cannot longer remain in force. Rents must advance, or a new form of construction devised, which will make the present methods seem obsolete, and bring the new space within the present means of tenants.

The Committee realizes that the Government has the right to obtain first deliveries on all materials. This stand is the only proper one to take. Then come our Allies, for we are fighting for the same cause. After these two interests have been taken care of, then, and only then, private work can be considered. These unavoidable obstacles add to the difficulty in finding a solution, but the situation is not so bad as it might be, for every one knows the conditions.

A statement is credited to one of the authorities at Washington, in which he said that all private work should cease, and no new operations started. Without disloyalty we maintain that this is a wrong stand to take, for to successfully wage war home industries must be fostered and encouraged, otherwise the country will become stagnated and its economic structure undermined. The slogan, "Business as Usual," does not go far enough. Business speeded up to its utmost point should be the axiom, for by this means alone can the country prosper and obtain the wherewithal with which to combat its enemies. —"New York Record and Guide."

TO STANDARDIZE BUILDING METHODS AND SAVE WASTE.

At the recent convention of Real Estate men in Milwaukee models of houses and other buildings were exhibited to show how the use of standardized materials were an aid to building efficiency and especially, how costs could be reduced by saving unnecessary waste.

Plans along this line were discussed by Real Estate men from all parts of the country and are believed to be practicable. The idea would revolutionize the building business by manufacturing all building materials, every part and parcel which goes into houses, skyscrapers in uniform dimensions and sizes. Confusion and waste would then be very largely eliminated.

The same thing applies in the automobile industry as in building. If every car was made from raw material regardless of standard the waste would be enormous. On the contrary, autos are assembled from standardized units. If this were not the case many original designs would be the result and no uniformity.

In building why should not the same rules apply? Could not all parts be made and then assembled by the builder similar to the small boy playing with his blocks?

There is not as much waste, however, in the skyscraper as there is in building the small wooden structures and dwelling houses. A skyscraper is practically constructed and finished before the cellar is dug for the foundation. To those not of the architect's profession, it is interesting to watch a large skyscraper being delivered on endless processions of trucks and being erected and fitted together and never a mistake in calculation being made. Every girder, every pillar and every piece of stone-work has its place and fits it to the quarter inch. This feature could be accomplished throughout the building profession.

DEMOLITION OF BUILDINGS SHOWS WELL PRESERVED IRON

The Building Department of New York City made some interesting notes of value to the building world in their report of the demolition of the Hoffman House and Albemarle Hotel. Tall commercial buildings have since taken the place of these old landmarks.

Commenting on the conditions of the buildings, the report says: The building was located on the northwesterly corner of Broadway and Twenty-fourth street and consisted of a seven-story and cellar non-fireproof structure. Adjoining and surrounding the same was a twelve-story fireproof building used in connection with the hotel. This latter structure occupied an L-shaped lot with frontage on both Broadway and West Twenty-fourth street. Records in the bureau show construction to have been commenced in October, 1906, and completed in December, 1907.

In July, 1915, a permit was issued for the demolition of the building, making in all seven and a half years as the extreme age of the structure. The walls were of the skeleton type, twelve inches thick for the uppermost seventy-five feet of height and thence increased four inches in thickness for each lower sixty feet or fraction thereof. For floors, nine and ten inch terra cotta flat arches, sprung between steel beams, were used, with the usual two-inch cinder fill between the sleepers and a double wood flooring. The partition walls throughout the building were of terra cotta blocks plastered on both sides. All interior columns were incased in two-inch terra cotta block, while the customary four and eight inches of brickwork was used for exterior and wall columns.

The foundation consisted of concrete piers in open caissons carried down to rock at a depth of about thirty-seven feet below curb. It appears that during the construction of the foundation considerable ground water was encountered, necessitating the use of steel sheet piling.

A great deal of this sheeting has been uncovered, especially where the same interfered with new work now in progress.

The sheeting for the most part was intact and showed very little corrosion. In fact, in many places the smooth, even surface of the black iron was plainly visible. Whether the absence of rust was due to the comparatively short period that the sheeting was in place (a little over seven years) or whether it was due to the drawing away of the ground water by the new subway construction is hard to say. Evidently both contributed toward the preservation of the metal.

There's one variety of advertiser who gets our Angora. This is the chap who can't afford a large space and doesn't advertise, as a regular thing, because a small space "isn't seen." Some of the biggest advertisers we have started out with small space. Ask them whether the small space is seen. If advertisers had to wait until their businesses developed to full page stature before advertising, there'd be mighty few advertisers. The big man becomes big by growth. And growth starts with the seed.

MADE IN AMERICA.

To-day the air is surcharged with the spirit of American loyalty spreading broadcast over this great republic and it is in the heart and on the tongue of rich and poor alike. Let us turn our thoughts for a brief moment to the question of consistency in applying our loyalty. Do we find a bend in our line where perchance it has not occurred to us that a consistent expression of our loyalty called for its application in just that direction? What, for instance, about "Made in America?" Are we recognizing the necessity of our loyal support to American manufacturers and our industrial independence? Should this not mean as much to each of us as any branch of service to American welfare?

It has been easier to buy from foreign countries—special products like dyes and chemicals from Germany,—finished products from France and England. This state of affairs has grown up, not so much because of American inability to produce the goods as because so many people have not been willing to accept the American-made product. Let our loyalty make the stamp—MADE IN AMERICA—supreme to any foreign label. A wall paper house, for instance, which has hesitated to show their patrons anything but "imported" papers and textiles are now placing American made goods beside those which are imported.

As far as possible, use American-made products. With all the shipping trouble, French factories turned into Red Cross stations or munition plants, do not ask that goods be brought over the seas. If we are to have freedom it should be a real freedom. Industrial democracy is a power vastly greater than any political power, be-

cause it is closer to the real needs of the people.

Business must be kept going as usual, but back of the business must be kept uppermost the thought of the young American lives which are being offered, and how every protection and every safeguard which the power of America can effect, either political or industrial, must be thrown about them. The arm of Uncle Sam is strong and his reach is long, but it will be magnified a thousand fold if the individual thought of the people is back of that strong arm in supplying the principle of loyalty in every direction.

Every obstacle to industry puts a hardship on your boy in khaki. Every threatened strike or labor agitation may keep from him the shoes or the coat or the gun on which his life may depend.

It is the business of the patriotic man who is not called to the colors to keep a sane, stable balance at home which shall give the man at the front every assistance and protection: "Business as Usual" to stand back of the boy at the front.—"Keith's Magazine."

Few persons appreciate the enormous cost of advertising a popular product before it obtains popularity. One of the most successful advertisers in the country, whose income reaches hundreds of thousands of dollars annually, told *Leslie's Weekly* that he wasted at least a quarter of a million dollars "before he learned the advertising game." He estimates that he spent this amount on circulars, gaudy lithographs, sign boards, and street car advertising, out of which he received so little benefit, as far as he could trace it, that he regarded the expenditure as money pretty nearly wasted.

BE PROGRESSIVE.

The best is the cheapest on both ends and in the center. Improvement does not impose a tax, as efficiency pays for itself. The penny scrimper cannot possibly hold out against as much as the gloomy, ugly, and unobliging progress. The best equipped shop never asks establishment. Be progressive.

There never was, never will be, a better medium for the man who has something to sell to a given class of buyers than the trade paper whose circulation is limited to that class. Newspapers with their swollen circulations strike at best but a chance target here and there. The trade paper carries your rifle fire to targets exclusively. You can't miss,—if your ammunition's right.

Once-in-a-while advertising is like once-in-a-while eating. Good in its way, but decidedly not nourishing.

The prosperous, the great, the wise,
You may have noticed, advertise!

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

CONVENIENCES IN POPULAR DEMAND

Prospective tenants and buyers want to know how they are going to keep warm in the chilly mornings and evenings of the early Fall and late Spring, when it isn't practical to have the furnace going.

If you can point to a Baseboard Gas Outlet in each room to which Gas Heating Stoves can be readily connected your Prospect is then assured of a quick, clean and economical method of getting the desired auxiliary heat.

City, N. J. Owner, G. J. Costello, Ventnor, N. J. Stucco, 3 stories, 30x50 feet, slate roof, hardwood floors, hot water heating, electric lighting, tile work gasoline storage system. Contract awarded to Wesley B. Porch, Atlantic City, N. J.

Factory, Yardville, N. J., \$20,000. Architect, J. O. Hunt, 114 North Montgomery st., Trenton, N. J. Owners, Zee Zee Tire and Rubber Co., Trenton, N. J. Brick and concrete, 1 story, 50x83 feet, slag roof, concrete floors, steam heating, electric lighting, rolled steel

sash and skylights, fire doors. Contract awarded to Martin Bros., Yardville, N. J.

Signal Bridges (5) and Repairing (3), New York Branch, between Delaware River and Stillman, N. J. Engineer, Samuel T. Wagner, Reading Terminal, Philadelphia. Owners, Philadelphia and Reading Railroad Co., Reading Terminal, Philadelphia. Consists of erecting new signal bridges and reconstruction 3 old signal bridges. Contract awarded to Belmont Iron Works, Twenty-second and Washington avenue, Philadelphia.

Miscellaneous Construction News

Pay Office, Wilmington, Del. Architect, private plans. Owners, Harlan & Hollingsworth, Wilmington, Del. Brick, 1 story, 57x30 feet, slag roof, pine floors, electric lighting. Owners have received bids.

Factory, Vandevere avenue and Jessup st., Wilmington, Del. Architect, Leon W. Crawford, Wilmington, Del. Owners, Diamond Ice and Coal Co., Wilmington, Del. Brick, 1 story, 100x250 feet, composition roof, concrete floors, electric lighting. Architect taking bids, due as soon as possible. H. D. Haddock & Co., Chas. Bryce, J. A. Bader, and F. E. Healy & Son, all of Wilmington, Del., are figuring.

Residence, Warrenton, Va. Architects, McIlvaine & Roberts, Otis Building, Philadelphia. Owner, Mrs. F. E. Bowman, Warrenton, Va. Stone, brick and stucco, 2 stories, 68x28 feet, shingle roof, vapor heating, electric lighting, tile work, oak and pine floors, hollow tile, dampproofing. Revised plans in progress. Architects will take bids in about one week.

Residence, Stable, Garage and Farmer's Cottage, Warrenton, Va. Architects, McIlvaine & Roberts, Otis Building, Philadelphia. Owner, S. S. Preston, Otis Building, Philadelphia. Stone and brick, 3 stories, 30x84 feet, 1½ stories, 36x44 feet, 1½ stories, 21x34 feet, and 2 stories, 23x37 feet, slate and tin roof, oak, pine and cement floors, vapor heating, electric

lighting, tile and marble work. Revised plans in progress. Architects will take bids in about one week.

Machine Shop, Navy Yard, Washington, D. C. Architect, private plans. Owners, U. S. Government, F. R. Harris, Chief, Navy Department, Bureau of Yards and Docks, Washington, D. C. Reinforced concrete and brick, 5 stories, 502x162 feet, gypsum composition roof, steam heating, electric lighting, pine floors, hollow tile, elevators, rolled steel sash, fire doors, hollow metal doors, ornamental iron work, wire work. Contract awarded to the Industrial Engineering Co., 30 Church street, New York City.

Garage and Sales Building, Second and French streets, Wilmington, Del., \$30,000. Architect, J. J. Kennedy, Ford Building, Wilmington, Del. Owner, John P. Cahill, Wilmington, Del. Brick (slow burning construction), 3 stories, 66x65 feet, slag roof, steam heating, electric lighting, rolled steel sash, fire doors, elevators, metal ceilings. Contract awarded to Joyce & Kerrigan, 116 North Broome street, Wilmington, Del.

Building No. 105, Brass Foundry and Optical Shop, Navy Yard, Washington, D. C. Architect, private plans. Owners, U. S. Government, Bureau of Yards and Docks, F. R. Harris, Chief, Navy Department, Washington,

D. C. Brick, steel and reinforced concrete. Brass foundry, 1 story, 7 bays, 54x280 feet; optical shop, 5 stories, 60x34 feet, and fifth story addition to present building, 64x52 feet, slag roof, concrete and maple floors, heating extension, electric lighting, hollow metal sash, hollow metal doors, hollow tile, metal lath, roof ventilators, iron stairs, ornamental iron work, wire work. Owners taking bids, due November 26th. Warren-Moore Co., Colonial Trust Building, Philadelphia, are figuring.

Bank, New Castle, Del. Architect, Charles R. Peddle, 134 South Fourth street, Philadelphia. Owners, New Castle Trust Co., New Castle, Del. Brick and marble, fireproof, 1 story and mezzanine, 24x80 feet, slag roof, marble and composition floors, hot air heating, electric lighting, tile and marble work, bank fixtures, metal lath. Architect taking bids, due November 27th. Metzger & Fisher, Otis Building; Wills-Ludwick Co., 34 South Seventeenth street, and James H. Wells, Otis Building, Philadelphia, and A. S. Reed Bros. Co., Wilmington, Del.; W. D. Haddock & Co., Wilmington, Del., and J. E. Healy & Son, Wilmington, Del., are figuring.

It's the Long Fire Travel in the Burnham Cosy Comfort Boiler That Makes the Short Coal Bill

If you can keep the hot gases and smoke travelling back and forth inside a boiler long enough to extract the bulk of their heat, and still not make the draft sluggish; it's plain enough that less heat will go up chimney and more heat go into your radiators.

That back and forth action is what we call fire travel. It's this long fire travel in the BURNHAM Cosy Comfort Boilers that has a lot to do with making their short coal bills.

Division prepares the typical plans of the cantonments, including water distribution, internal sewer and draining lines, lighting distribution, roads and minor utilities. The Material Division makes recommendations as to placing all contracts for material to be purchased by this organization. The officer in charge is in close touch with the supply committees of the National Munition Board and the Transportation Committee, doing everything to facilitate rapid delivery of material to the contractors. The Construction Division is in charge of all operations in the field, the officer in charge being in constant communication with the Constructing Quartermaster in charge of each cantonment and with the contractors. The Accounting Division supervises accounting matters and general administration of the office, the accountants at each cantonment who handled all payments eing under the officer in charge. All legal matters are handled by this division.

The ideal plans for cantonments as originally laid out by the ar Department, known as the straight line arrangement of units and the U-shape arrangement of units, were not used, as it was found necessary to alter these schemes to fit the topography and special conditions that developed in each camp. The unit scheme, the elemental principle on which the camps were developed, comprising a principal street with a parallel service street with connecting streets between, was adhered to. In general, the unit consists of a central block between the principal street and service street and two cross streets. This contains barracks, lavatories, in some cases wagon sheds and some minor buildings. On the opposite side of the principal street are located the officers' quarters of the various divisions of the service, administration quarters, etc. To the other side of the service street are placed stables, wagon sheds, hangars, shops, stores, etc. As long as the units are joined so that the principal street and the service street are continuous and at the easiest possible grade, the arrangement and the grouping of the units is entirely flexible and could generally be adapted to the most difficult conditions of site without excessive cost. The units are grouped in small divisions with fire brakes between. The Constructing Quartermaster had the responsibility of adapting the plans to the topographical conditions of the cite. The impossibility of using the ideal arrangement of the units was one big reason for letting the contracts for the cantonments on the percentage basis and because of the varying conditions in different cantonments, the cost of the construction is reported to have varied from \$5,200,000 the lowest figure, to \$7,800,000, the highest.

Wood is the principal material entering into the construction of the 30,000 cantonment buildings. Of Southern pine alone, 300,000,000 feet were used, and this was bought by the Government at an average price of \$20.00

NATIONAL ARMY CANTONMENTS

The organization of the War Department for construction work pertaining to the 32 cantonments for housing the National Guard and National Army, also emarkation depots, warehouses and other buildings, is handled by

the office of the cantonment construction division of the Quartermaster's Department. Brigadier-General Littell is the head of this organization, the work of which is divided among several divisions. The Engineering

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

per thousand. It took 100,000 carpenters to put the buildings up in the required time.

Camp Pike.

"Too marvelous for comprehension," said Major General Samuel E. Sturgis, after his first inspection of the Camp Pike. There the contractors broke ground on July 9th. Then the reservation near Little Rock, Arkansas, was a wilderness of rocks and scrub oak, the nearest railroad was seven miles away, and it was not until July 16th that tracks of the Missouri Pacific, blasting their way through the rocks, reached the cantonment. Now its 1,663 buildings furnish accommodations for 43,900 men and 17,800 horses.

The work was accomplished in spite of unusual difficulties in engineering and construction. Contrary to the general rule of selecting level sites for cantonments, Camp Pike is on a series of hills, and full of steep grades. Almost every foot of land had to be cleared of a comparatively heavy growth of forest. The excavating averaged seventy-five per cent. rock, and was of the most difficult kind. Cuts ran as deep as 27 feet, and in one section the excavating for sewers averaged a depth of 18 feet for over a mile. There was no natural water supply, not even a spring on the reservation—the nearest artificial supply being eight miles away. There was no railroad, and for weeks all material and all labor had to be hauled from Little Rock, eight miles away. Government work at Fort Riley and Louisville had started, in June, and had drained the territory of both labor and material, and the supply of the former especially was scarce and poor.

The contractors, James Stewart & Co., Inc., of New York, immediately summoned to Camp Pike their experts from that city, from St. Louis, Salt Lake City, Chicago and Toronto, and within a week had a highly organized staff of specialists in every branch of the work on the reservation.

Wells were driven, and a water supply was established that was entirely adequate for the needs of the camp; a temporary electric light and power system was installed at once. The lumbermen of Little Rock and Arkansas rallied loyally to the support of the contractors, and within a short time lumber was flowing in at the rate of a million feet a day, later at the rate of a million and a half feet daily. The country was combed for labor until the force of workmen approached 10,000 men and the payroll \$375,000 weekly.

Nothing was overlooked that would save or gain time. The work of unloading the nearly one hundred cars that soon were arriving daily went on without intermission; night shifts worked under powerful search lights. Whenever possible, machinery or fittings needed at once, sometimes weighing several thousand pounds, were shipped by express, and passenger trains were held that quick connections might be made. From the very start, work that could be done after dark was taken

up by night shifts when the day gangs quit. Trench digging, drilling and lasting went on under search lights, and pipe laying was done under traveling lines of incandescents which were moved ahead as the work progressed. Night was found to be an especially favorable time for the operations of the powder men, as they did not then interfere with the work of others, and as the depth of the cuts practically reduced much of the tunneling to mining operations, this could be done at night as effectively as in the daytime. The air compressors and the sewer digging machines worked twenty-four hours a day. Work on the concrete septic tank went on night and day, and pouring of concrete never stopped after it once began.

No saving of time was too small to be looked after. Delivery of material and the output of the mills were closely watched all the time, and at the least sign of delay, or scarcity in the special kind of lumber needed for a particular building or unit, this material was expedited. Buildings were roofed out of the usual order of construction, that the men might continue work on the interior and under shelter if rain came up. By laying the joist, putting on the floors, then laying down the studding, covering these with the outside sheathing and shiplap, and then raising and fastening the sides in place, speed was made. Some idea of what this meant in quick construction may be gained from the fact that on August 16th a 43x140-foot two-story barracks was erected, sheathed, roofed, floors laid, doors hung, stairs up, windows in and even screened, and scaffolding removed, in two hours and 55 minutes.

Water is supplied from the water works at Little Rock through a 16-inch main, 8 miles in length, at which point there is a booster station, consisting of three 3-stage centrifugal pumps operated by 100-H. P. motors. These pump the water, to the elevation of the cantonment site, a total lift of 400 feet, into five storage tanks having a total capacity of one million gallons. From this point the water is distributed by four motor-driven pumps throughout the reservation, in 30 miles of redwood and cast iron mains.

The sewer system consists of a septic tank, three main trunks, with a length of about six miles, and about twenty-one miles of laterals. The septic tank is of concrete 50 by 100 feet in size and ten feet deep, and divided into eight compartments having a capacity of 350,000 gallons.

Plumbing is provided in almost 50% of the 1,663 buildings comprising this cantonment, the installation of which required the employment of from 300 to 400 plumbers for weeks. The electric energy for the permanent electric light and power system of 3 phase at 13,200 volts is furnished from Little Rock through a seven-mile transmission line to the cantonment transformer station. The installation for the outside wiring required 1,150 poles, 103 transformers and 30 miles of main line, with

170 miles of primary and secondary lines to provide electric current for 278 street lighting fixtures. The inside wiring required the installation of 200 miles of wire for 30,000 outlets.

Transporting to and from work, and feeding and caring for the big army of workmen employed at Camp Pike was one of the incidental but very important problems the contractors had to solve along with their actual construction. Every morning half a dozen trains, in addition to other conveyances, brought thousands of men to the cantonment from Little Rock, and carried them back at night. Other thousands never leave the reservation. Meals were provided for all and sleeping quarters for at least half of the laborers. To do this, the barracks, to be occupied later by the soldiers, were fitted by the Company as mess houses, and in these the employees were fed and housed. Twenty of these great dining halls, each feeding from 200 to 300 men at a meal, have been opened. This required the serving of an average of 15,000 meals per day, requiring the following supplies: Beef, 3,500 pounds; butter, 500 pounds; ham, 600 pounds; bacon, 700 pounds; potatoes, 2,250 pounds; onions, 225 pounds; beans, 300 pounds; cabbage, 750 pounds; cheese, 125 pounds; sugar, 1,500 pounds; eggs, 300 dozen; bread, 4,500 loaves; coffee, 600 gallons.

The original cantonment provided for 667 buildings, to which additions have been made from time to time until it now comprises 1,663 buildings, of which 337 are barracks, most of them two stories in height, 103 officers' quarters and 75 base hospital buildings, giving a capacity of 1,000 beds.

The total number of cars of material of all sorts unloaded up to October 21st was 4,331, and among the main items of materials required in the construction were the following:

- 48,000,000 feet of lumber
- 4,400,000 square feet of roofing
- 4,600,000 square feet of floors
- 500,000 square feet of wall board
- 82,000 door and window openings
- 12,000 kegs of nails
- 10,450 plumbing fixtures

The base hospital, regimental medical buildings and officers' quarters were heated by steam, an innovation in cantonment building in the southeast, which required oilers having a capacity of 8,200 horse power, providing steam distributed through 25 miles of steam pipes into 3,890 radiators, having a total capacity of 124,000 square feet of radiation.

Camp Funston.

The George A. Fuller Construction Company, of Missouri, a subsidiary of the George A. Fuller Company of New York, was selected for the work of building the regular army structures, numbering 371 buildings, at Fort Riley, Kansas, with the understanding that the cantonment order for Camp Funston was to follow. Their force landed at Fort Riley on May 17, 1917, with instruction to build these

371 buildings as early as possible. 6,011 men and 5,768 animals were to be accommodated here. In forty-two days elapsed time every one of these substantial frame buildings was turned over completed to the Government and the troops moved in. And completion meant everything—barracks, mess buildings, lavatories, post exchanges, blacksmith shops, 22,000 lineal feet of water supply line, ranging from 12 inches to 4 inches in diameter, and a sewerage system composed of 34,261 lineal feet of vitrified pipe ranging from 24 inches down to 4 inches in diameter.

They were formally notified on June 20th that the contract for the building of Camp Funston was their. They were not allowed to proceed, however, as the actual site had not yet been selected. The Government owned some 36 square miles of land surrounding Fort Riley and the board of experts appointed to mark out the actual site did not reach a conclusion until July 5th. They then announced their selection, an irregular piece of ground on Ogden Flats, between the Kansas River and the foothills, about a mile wide and two miles long. This site is on the main line of the Union Pacific Railroad, about 4 miles northeast of Fort Riley proper and 7 miles from Junction City.

On July 5th, then, the contractor got down to work. He found the site was a huge hay field from which the Government had been feeding part of its stock for years, very nearly level in topography and comparatively easy to dig. The immediate problem to be solved was that of securing necessary labor. The only towns nearby, Junction City and Manhattan, had less than 5,000 population apiece. Hurry calls for all kinds of labor were sent throughout the Middle West and a squad of some sixty automobiles was organized to scour the surrounding country and bring men into the camp. Regular barracks, designed for the use of soldiers later, were constructed for the temporary use of the workmen. As these barracks were completed the force of men was correspondingly increased.

It was a big order to fill. 1,598 buildings and structures with a floor area of about 130 acres. If they were placed end to end they would extend 25 miles. With a few exceptions they are of frame construction, the outside walls and ceilings being lined with paper and wainscoted and lined inside with wall board. They are all built on concrete posts except the lavatory buildings, which have concrete foundations and concrete floors.

The Government schedule called for the completion and delivery on September 18th of 900 of these buildings. And on that day, 75 elapsed days from the time they started to work, the George A. Fuller Construction Company turned over 900 completed buildings. It had taken them 2½ months to turn a hay field into a city with structures to house 40,000 men. The buildings completed subsequently,

comprise stables, wagon sheds and buildings for the remount station.

Here are some of the things they had done in those 75 days:

They had completed buildings at the rate of 12 a day.

They had built six wells, each 36 inches in diameter by 50 feet deep, equipped with pumping machinery and filtration plants.

They had distributed this water throughout the camp through 84,000 lineal feet of pipe, and had arranged to carry away the sewerage through 133,000 lineal feet of vitrified sewer pipe.

The Union Pacific Railroad had laid 67,000 feet of single track sidings within the camp. 3,965 cars of all kinds of material, or an average of 53 cars per day, had been received by the contractors.

They had employed, housed, and fed at 30 cents per meal as many as 9,377 men in a single week without one fatal accident.

They had paid as much as \$346,000 for labor, in a week.

They had no strikes, lockouts or other forms of labor difficulties.

And above everything they showed what an American industrial organization, backed by patriotic American labor and all under the supervision of the democratic American Government, can do to help win the world war.

Camp Devens.

At Camp Devens, Ayer, Mass., 746 buildings were completed by September 1st, 124 more than required by schedule. The total number of buildings erected at Ayer is 1,242, and to finish these on time the contractors, Fred T. Ley & Co., Inc., employed a force of 9,000 men. There were twenty miles of pipe in the water supply system and a like amount for sewerage disposal. To vary the story of construction something of the work involved in this installation done by the W. G. Cornell Company is interesting.

Previous to the starting of work by these contractors the Government had ordered materials supposedly sufficient in quantity to supply the needs of the entire cantonment. The first move was to schedule the material on order so as to assure a sufficient and continuous supply for the work and keep the force of plumbers, 500 in number, engaged. This scheduling of material required the services of 10 experienced plumbing installation engineers. The second step was to make working lay-outs of the plumbing installation based on the building plans. Individual drawings were made for each type of building, thus subdividing the work into groups, and there were sketches giving the measurements for every bit of the work.

A workshop was built at the railroad siding where raw materials were delivered. It was the duty of the purchasing organization to maintain the supply and to follow up material

in transit. For delivery of material about the cantonment site from the railroad 8 automobile trucks were employed.

Working from the drawings, a shop crew of 150 men caulked together all small sections of soil pipe in accordance with the sketches and cut it in proper lengths for setting up. In an erection shop provided with power-driven pipe-cutters and threading machines, all the supply pipe was similarly handled. An installation crew of 50 men was used for installing soil pipe and a like number for installing supply pipe, after it had been all fitted and set up in the shop in accordance with the measured drawings. This system made it possible to keep the installation going at all times and frequently the rough plumbing was installed before the concreting in the lavatory buildings. Further, the organization was flexible, as the force could be doubled up in the pipe shop on the fitting work when work for the outside crew was slack.

The work involved the setting up of electrically-driven pumps at the supply well which pumped water eight miles to four 50,000-gallon receiving tanks. 48,000 feet of 12, 10 and 8-inch water pipe were laid from the pumps to the tanks. For service lines there were 28,000 feet of 2-inch pipe, 30,000 feet of 1½-inch pipe, 138,000 feet of 1-inch pipe and 110,000 feet of ¾-inch pipe with the necessary corporation cocks, service boxes and valves. There were installed 2,650 water closets, 5,800 showers, 750 ten-foot metal basin troughs, 738 six-foot urinal troughs, and within buildings, 32,000 feet of 4-inch cast iron soil pipe, 28,000 feet 2-inch cast iron soil pipe, 228,000 feet 1½-inch, 150,000 feet 1-inch, 72,000 feet ¾-inch and 9,000 feet ½-inch galvanized iron pipe.—"Architect and Building."

STUDY THE ADVERTISING PAGES.

The average reader does not pay very close attention to the advertising pages unless he happens to be particularly interested in some product or is in the market for equipment or material. He is missing a part of scientific literature which offers suggestions as practical as the reading pages. He is also losing an opportunity of studying a subject which bears the most important relationship to every business on earth. No matter what line of work you may be engaged in, a knowledge of publicity and salesmanship is valuable. Every form of occupation to be made successful depends upon a degree of salesmanship. Study the advertising pages. They represent an expenditure of time, thought and money, which makes them well worthy of your attention.—"Municipal Engineering."

We know lots of men who have made money without the aid of advertising, but— they haven't made it since 1876.

As The Editor Sees It

CORROBORATIVE testimony in support of the view taken by THE GUIDE to the effect that a not inconsiderable proportion of the existing stagnation in the building trades is fairly chargeable to a lack of confidence rather than to any real difficulty presented by the situation, reaches us from Washington, D. C. Writing to the *American Contractor* from the capitol city, Mr. Frank P. Milburn, of Milburn, Heisler & Co., architects, observes:

"The investing public, in a measure, has been misled, or is under the impression that it is impossible to get building materials such as steel, lumber, etc., at reasonable prices. This conclusion, no doubt, has been formed from the published statements that the Government was taking over all classes of building material and that private owners would have to pay considerably more for any material that they contemplated using.

"We have recently let the contract for the District National Bank building and the office building for the Potomac Electric Power Company, and we found that the figures from the general contractors are little higher than they were last year. We do not believe that prices will ever be as low as they were from 1911 to 1913, and there is nothing to be gained by delay in construction of buildings. The building business for the year 1917 has fallen off about 75 per cent., due largely to the false impression of the high cost materials and labor.

WE have reliable information on the steel situation as follows:

Some of the largest mills are to-day accepting orders for steel from two to four months delivery at the Government price, which is \$60 a ton Pittsburgh on structural steel and \$65 a ton on plates.

"Class A is used for only shipbuilding and Government needs.

"Class B is material for the Government, such as buildings built by private concerns for the making of ammunition and other Government needs.

"Class C covers all material not included in the other two classes for general building in open market.

"The Government need for shipbuilding, etc., will not exceed 40 per cent. of the output of the larger mills. Some of the larger mills are rolling heavier building sections, such as beams and columns that are not suitable for the Government and are used outside by private owners. There is no demand for this class of material by the Government.

"There has been a scarcity of skilled and common labor, but with the finishing up of the cantonments there will be ample labor to take care of the building situation. It is the duty of every business man to encourage business in every line, so as to maintain normal conditions. If we fail to do this, from what source will the Government receive its taxes?"

AN interesting survey of the building situation appeared in a recent number of the *New York Real Estate Record*.

"The optimistic feature of the building outlook is the growing realization that many forms of building and construction work are and must be recognized as absolutely essential to the industrial efficiency of the nation," says the survey in question. "The leaders of the country state in straightforward terms that upon the production of American industry depends the ultimate success of our country in the war. Everywhere the word is being passed to 'speed up necessary production'.

"Naturally the possibilities of increased production are limited by the available 'plant.' Construction of the tools of industry must continue if the output of industry is to be increased. Gradually the country is awakening to the vital fact that without construction production cannot be 'speeded up' to its fullest capacity; nor can this increased production be maintained after the war unless adequate construction takes place in the meantime.

"The movement, which is gaining headway for the temporary mobilization of construction interests, has the same objects in view that are common to other war-time measures for the "pooling of resources," such as have been accomplished by the copper, steel, coal, lumber, and other vital war-time industries. American business to-day is directed

**DRAWING

PRINTS**

toward one single aim, namely, to win the war. This war has taught business the world over that without organization and co-operation nothing can be accomplished.

"It is therefore highly desirable that the building and construction interests should mobilize their forces, and through an organized identity in Washington, consisting of a small national advisory board, to suggest, advise and direct these forces along the lines that will help most in the war, and prepare best for the restoration subsequent to the war."

* * *

THE building business, if temporarily organized, can do a great service to this country in preventing the conduction which befell England and which now threatens this country. Having allowed her building industry to become disorganized during the war, England is at last obliged to attempt to provide, through governmental action, proper housing accommodations for about two millions of her population. Her housing shortage is impairing England's industrial efficiency at a time when in all her history she can least afford to have it impaired. Had England not made the mistake of regarding the whole building industry as non-essential she would have saved millions of dollars and a great amount of industrial discontent. Had England mobilized her reconstruction interests as she did her other industries at the beginning of the war attention would long ago have been drawn to the need or increased housing and factory construction, and effective steps long since taken to meet the situation.

"A recent survey made showed that from nearly every important center comes a demand for more factories, warehouses, workmen's homes and apartment houses. The shortage of workmen's homes is too well known to be stated again. And yet because of apparent high costs, uncertainty, timidity, and sometimes a mistaken idea that building is unnecessary to the conduct of the war, private enterprise, unco-ordinated as it is, is unable or unwilling to perform the full measure of construction which conditions demand."

* * *

FACTORY building has been fairly well maintained, to be sure; but still the supply is far below the need in most manufacturing centers. But factories employ workmen, and workmen must live in houses. Since employees flock into the industrial centers to work in the new factories there must also be dwelling houses where they can live decently. With this thought in mind the following figures on the types of buildings started this year and last become very significant. It will be seen

that the building of factories, mills and plant extensions shows an average increase of 63 per cent. over last year (for a territory covering the northern, central and eastern section of the country, containing 45 per cent. of the population of the country):

MANUFACTURING BUILDINGS STARTED.

	1916.	1917.	% over 1916.
January—			
February—	\$8,742,000	\$14,535,000	66 inc.
March—	7,340,500	14,305,000	94 inc.
April—	11,650,500	12,050,000	3 inc.
May—	11,234,500	24,336,000	116 inc.
June—	14,681,000	22,864,000	55 inc.
July—	13,763,000	16,826,000	22 inc.
August—	9,341,314	19,593,000	109 inc.
September—	11,398,301	23,295,500	104 inc.
October—	10,846,474	10,623,000	2 dec.
November—	18,046,000		
December—	17,652,000		
	14,081,000		

* * *

ON the other hand, residential building has shown a steady reduction since our entrance into the war. Since May, 1917, the average monthly reduction as compared with last year is about 28 per cent.:

RESIDENCES ACTUALLY STARTED.

	1916.	1917.	% over 1916.
January—			
February—	\$22,383,044	\$24,983,500	10 inc.
March—	22,783,000	39,674,000	73 inc.
April—	31,286,000	32,413,000	4 inc.
May—	33,140,500	43,505,000	31 inc.
June—	43,122,000	39,029,000	9 dec.
July—	46,119,845	31,933,000	31 dec.
August—	32,843,000	22,828,000	30 dec.
September—	34,003,000	26,658,700	22 dec.
October—	39,087,200	19,558,000	50 dec.
November—	51,043,000		
December—	39,656,000		
	34,362,000		

"While it is conceivable that high-grade residential building might feel some hesitation in these times, there is no excuse for a complete unsettling of the necessary balance between industrial and residential work of all types. If the building interests fail to provide dwellings for the employees in these tremendously expanded factories, then all the evils of overcrowding will occur in this country that have occurred abroad, with the same or even greater impairment to our industrial efficiency.

"Concentration and centralization of the building interests of the country to gather data and study the national building problems would tend to act as a balance wheel to the industry, and intelligently direct its efforts so as best to serve the nation in the present crisis."

* * *

THE Board of Examiners and Registration of Architects of New York State has filed its second annual report, which is as follows:

The act of creating this Board became a law on April 28, 1915, and was re-enacted May 4, 1917, with amendments affecting the name of the Board and term of office of the members, extending the time for registration without examination, and making certain minor changes. The Board was appointed by the Regents, and held its first meeting on May 22, 1915.

The Board held thirty-one meetings during its first year, and twenty-five meetings during the second year to and including September 13, 1917. Ten of the twenty-five meetings occurring during the second year were held in Albany, fourteen in New York and one in Buffalo.

Total applications received during the first two years, since the law went into effect, number 1,991. Of those 175 were withdrawn, 1,367 have been approved, 358 have been disapproved, with the recommendation that they be not given certificates without examination, and 89 remain to be given final consideration.

No examinations have been held for the admittance of new practitioners. Only two applications as yet have been received for registration upon examination.

During the year the Board has approved 350 applications for registration, making the total registration, on September 13, 1917, 1,367. One hundred and eight applicants appeared before the Board during the past year for personal hearings, most of them in appeal from previous disapproval of their applications and some upon request of the Board to present proofs of qualifications. Eighteen appeals were granted, leaving the net total disapprovals for two years 358, as stated.

THE rules for the conduct of the Board, which, including a syllabus of examinations submitted last year, were given further careful consideration by Chancellor Sexton and Dr. Downing, and finally adopted by the Regents May 31, 1917, will be printed shortly in booklet form.

The members of the Board being engaged in private practice and necessarily giving only a portion of their time to the work of the Board appreciate the privilege of co-operating with a department of the State University, which is charged with the duty of administering the Registration Law. The Board is under obligation to Dr. Downing and to other officials for wise counsel and to those in charge of records for efficient assistance rendered.

The Board of Examiners, after two years' experience with the operation of the Registration Law, and after examining the work of scores and hundreds of architects who are not a credit to their profession, is confirmed in its belief that the most important function of the Registration Law is its tendency to raise the standard of education and technical qualifications. The Registration Law does not prevent engineers and others doing building work, but it does forbid any new practitioner assuming the title of "architect" until permission is granted for reasons which in effect make "architect" a degree and the certificate a diploma of achievement. The law does not in any way compel the public to patronize architects, except as it may command respect by fixing high standards of ability and qualifications for those permitted to use the title. Your Board believes that it has evidence of a strong impulse toward higher education on the part of young men ambitious to practice, and, with the assistance of architectural schools willing to co-operate with the Board, has confidence that the law will justify its beneficent purpose.

* * *

THE consensus of opinion seems to be that registration is commendable and necessary. It is to be regretted in the circumstances, that the bill introduced at the last session of the Pennsylvania Legislature by Senator Vare, failed to pass. The drift of opinion favors the view that the bill was a trifle over-drastring in certain of its provisions. It should be kept steadily before those to whom is committed the task of preparing the next bill of the kind that the chief end to be attained is to prevent the promiscuous use of the term "architect" at the hands of men whose lack of skill is calculated to lower professional standards. With this end attained such other restrictions as may prove to be necessary will come in due

course. The main thing is, as stated by the New York Board, to raise the standard of educational and technical qualifications. The Philadelphia Master Builders' Exchange, which opposed the Vare measure, was not antagonistic, as we understood its position, to the principle of licensing and registration. Its opposition was to certain unwise stipulations inserted in the bill which were without bearing upon registration and were designed presumably to restrict unnecessarily the admission of new men to practice. With these severe provisions omitted the bill could have been passed at the last session. A reasonable bill along the lines indicated should experience little opposition in the next session.

* * *

UNDER the caption, "An Improved Building Outlook," a New York exchange remarks:

"Although the exact reason for the condition is somewhat difficult to analyze, the fact still remains that the local building situation is evidencing signs of undergoing a decided improvement. Through a long period of dullness the structural interests have looked forward to the time when the adverse building conditions would be dissipated and the general outlook improve to an extent that would permit of a renewal of activities. Each time there seemed to be an actual possibility of making a definite start some entirely new condition would arise to prevent or hinder a resumption of work on a scale important enough to encourage the industry.

According to the signs of the past week, however, it seems as though the long anticipated and hoped for building movement were more imminent than it has been for many months. Now is the time for the building interests to co-operate in an effort to fan this latent spark into a flame of burning activity.

"Unquestionably the recent actions of the Federal authorities in regard to the regulation of price and control of output of certain commodities essential to the building trades has exerted a most beneficent effect upon the industry. Furthermore, there are promises of additional regulation from the same source, soon to be announced, that will surely increase the optimism of the building trades and assist in creating a still better condition.

* * *

AT the present time the building material markets, which were lately in a chaotic state, have with few exceptions been stabilized. By virtue of this condition, architects, builders and owners are in a position to estimate with a certainty that was almost impossible but a few months ago. As a natural result there has followed a revival of in-

terest in building, with a greatly increased number of private operations out for estimates, and, during the past week a further evidence of better times in the volume of important work actually placed under contract.

Considered as a unit the building industry has not yet come to a realization of the fact that to day the building situation is far better than it has been for a long time. Individuals, however, who have closely watched the situation during the long and tedious period of inactivity and stress acknowledge that the outlook is improved and that from this time forth there is every reason to expect a steady flow of activity of a character that will have a tendency to hearten the allied building interests.

BUILDING SUPERINTENDENTS ORGANIZE.

New York Building Superintendents' Association Organized with Novel Features.

The purpose of the association is to create better superintendents, which will have a two-fold effect—first, to make a better class of superintendents for large buildings, and, second, to improve the operation and maintenance of those buildings. This will have the effect of making the men more valuable to the owner, thereby increasing their salary, and, on the other hand, through saving and diligence, reduce the cost of operation.

It is the earnest desire of the members of the association to co-operate with the building managers, and to this end representatives will attend the next monthly meeting of the New York Building Managers' Association. At that time President F. W. Douglas will present the purposes of organization and show how the association can be of benefit not only to building managers, but also to the owners of property.

The association meets every Tuesday evening at 4 West Thirty-seventh street, New York City, at which time informal discussions are had on subjects of current issues. It was proposed to have a series of lectures given by specialists on all of the major subjects applying to modern buildings, but for the moment this program has been abandoned because the Board of Education has stated its desire to run a series of lectures at the Vocational School in East Thirty-seventh street. These lectures would cover the subjects under consideration. The only thing that is holding the matter up is the obtaining of lecturers, but it is understood that this detail will soon be overcome.

One of the features of the association is the Labor Bureau, which is of benefit not only to the superintendent, but also to the owner, manager and employee. The way the system works out is this:

The superintendent of the building desires additional help. An advertisement is inserted and the address of the Bureau is given. The

man applies for a position and is examined after a fee of one dollar has been paid by him. This nominal amount goes to help support the Bureau. It is frequently found that the applicant is unsuitable for the position in question, but may be placed in another capacity where he is better fitted. The applicant saves money, because the usual fee charged by employment bureaus is 10 per cent. of the first month's wages.

An important feature of this system is the prevention of raiding by one superintendent

on another. It has the effect of stabilizing the operation of the building.

The operation of a modern office building or apartment house is intricate, and a good superintendent can do much toward the successful running of the structure and at the same time be of material assistance to the building manager. "Co-operation" is the slogan, but in no sense can the association be looked upon or considered as a union. This has been strenuously avoided in every move which has been made by the members.

est in furnace heating. At the last meeting the committee reported that already \$800 had been pledged for the 1918 advertising campaign. To carry out the advertising program as outlined will require \$2,000 and the committee has good hopes of raising this amount.

* * *

William Cramp & Sons, of Philadelphia, Pa., shipbuilders, purchased the property of the De La Bergne Machine Company, New York. The deal involved about \$1,500,000. The property includes three city blocks at 137th and 138th streets, and the East River, running west to the New York, New Haven & Hartford Railroad station, aggregating about five and one-half acres. While the shipbuilding concern has maintained an office at 100 Broadway, nevertheless, this purchase is its first actual invasion of New York as constructors. The company will use the property for the construction of marine engines, Diesel engines and refrigerating machinery.

* * *

The markets for building materials and supplies have felt the effect of the new contracts awarded by a strengthening all along the line, and there are numerous inquiries emanating from those structures that are out for estimates. The prices are steady, and in particular instances are indicating a tendency toward further advances. One of the most disturbing features of the present situation is the condition of the labor market. This is far from satisfactory, not only on account of the scarcity of available supply, but also from the fact that recently there have been labor disturbances that have greatly affected the general situation. While the building trades have not experienced these disturbances to an alarming extent, the condition exerts a marked influence upon all labor bodies.

* * *

R. S. Lindstrom, a Chicago architect, recently joined the staff of the Portland Cement Association and is attached to the Structural Bureau.

* * *

Kelley Island Lime and Transport Company, Cleveland, has taken over the plant of the Dutchess Lime Co., Dover Plains, N. Y. E. T. Belden, formerly Eastern representative for the Dutchess Lime Company, is in charge of the New York office.

* * *

The freight transportation situation is also one of the factors that are effective in holding the building field from its maximum effort. The exercise of priority rights by the Government is being experienced in almost every line of industry, and as a consequence deliveries on private contracts are more uncertain than they recently were. In addition to this, the transportation facilities of this country are rapidly becoming taxed to a point where congestion again prevails upon shipments in certain directions.

* * *

Clarence M. Woolley, for many years president of the American Radiator Company, has been appointed member of the War Trades Board by President Wilson at the request of

EDITORIAL NOTES

Durham Brothers, architects, announce the removal of their offices from the Heed Building to 26 South Fifteenth street, Suite 53.

* * *

Announcement is made that the electrical men of Philadelphia have formed an organization to be known as the "Electric Club of Philadelphia." A charter will be applied for during the coming week. It will be signed by twenty of the leading electrical men of the city. Officers have been elected as follows: President, Washington Devereaux, chief of the Electric Department of the Philadelphia Fire Underwriters' Association; vice-president, Frank H. Stewart, of the Frank H. Stewart Electric Company; secretary, R. C. Williams, Jr., of J. F. Buchanan & Co., and M. Edwin Arnold, of M. E. Arnold & Co., treasurer.

The membership has been limited to fifty for the first six months, after which new members may be taken in at a rate not to exceed five per month, until the limit of 100 has been reached. Not more than three representatives of any one firm may become members except in the case of public utility companies, where the limit of six will obtain.

The object of this club will be the advancement of the social, professional and commercial interests of its members; the elevation of the standard of electrical work; the furtherance of the use of electricity, and the general development of the electrical industry. Noonday luncheon meetings will be held twice a month, and there will be about four evening meetings per year.

* * *

An analysis of the production costs of stoves and furnaces in some one hundred odd plants as conducted by F. J. Stephenson, secretary of the National Association of Stove Manufacturers shows that the average cast iron stove should sell 68 per cent. and furnace 78 per cent. higher than in 1915. The report points out that there is a variation in figures in different localities. It is also stated that these figures could be reduced 15 per cent. if manufacturers are able to purchase iron and other materials at the prices fixed by the Government, but so far this has been an impossibility. On the other hand, the report shows

that the price of stoves and ranges have advanced only about 50 per cent. in the same period.

* * *

Projects figuring and contracts awarded indicate an improved building situation, says a New York report. The number of operations out for estimates and the volume of work actually placed under contract during the past week should be a very hopeful sign to the builders and their allied interests. Not only within the bounds of Greater New York has the situation improved, but reports from the suburban sections and from some of the larger cities in the East and Middle West bear out the feeling that the worst of the storm has been successfully weathered, and from this time forth a steady improvement in structural activity will be noticeable.

* * *

Among manhattan contracts that were placed during the week was that obtained by John H. Deeves & Brother for the reconstruction of the Washburne Wire Company plant at 118th street and the Harlem River, recently destroyed by fire. The E. E. Paul Company received a contract for the construction of a handsome private residence at 14 East 78th street for Andrew J. Miller, to cost more than \$50,000; the William L. Crow Construction Company obtained the contract for the erection of a \$250,000 office building down town for the New Jersey Zinc Company, and John Auer & Sons received a general contract to build the new \$100,000 bank structure in Brooklyn for the People's National Bank. Other contracts, but of lesser importance, brought the total volume of new business registered in that city up to a substantial figure.

* * *

The Master Tin and Sheet Metal Workers' Association of Philadelphia, Pa., has decided to continue its advertising and publicity campaign which it commenced earlier in the year. The results have been so gratifying that there is a movement on foot to enlarge the fund and increase the number of cards carried in the street cars. These cards have, it is said, brought to headquarters a great many inquiries and have stimulated the public inter-

Secretary Redfield. He is to administer supervision over imports.

* * *

"Building in Brooklyn Collapses and Several People Are Killed"—headline. All interested are paying the game of "passing the buck." Up to the present time no bureau has been found which should see that owners comply with the laws regarding overloading floors. P. J. Carlin, the Building Superintendent in Brooklyn, is quoted as saying that his decreased staff makes such a checking up impossible. It would be well to fix the responsibility, if for no other reason than to prevent a recurrence of such an accident.

* * *

Hydrated Lime Bureau, Pittsburgh, Pa., announces the appointment of Tyrrell B. Shortzer, formerly City Manager of Portsmouth, Va., to the newly created position of Eastern District Engineer, with headquarters in New York City. Also, C. W. Freitag, formerly construction superintendent for S. R. Smythe Co., construction engineers, Pittsburgh, has been appointed Western District Engineer, with headquarters at the home office of the Bureau in Pittsburgh. Appointments were effective October 1.

* * *

American Hardware Manufacturers' Association, with headquarters in the Woolworth Building, New York City, is now affiliated as a member of the National Industrial Conference Board.

Mr. J. W. Lucas, president John Lucas & Co., Inc., and Mr. C. N. Lauer, of Day & Zimmerman, are chairman and vice-chairman, respectively, of Group 9 of the Industrial and Commercial Section of the Liberty Loan Committee. Their splendid work resulted in \$3,687,550 for the Liberty Loan, placing the group third in a section of twenty-one groups.

Colonel Mark Brooke, United States Engineers, Wilmington, Del., engaged on fortification work, wants two building superintendents immediately, and would like to have names of several more to call upon later.

It isn't enough to just advertise. There is competition these days in advertising, as in other things. You must make your advertising attractive. You must make it say something,—something definite, original and convincing. If you lack faith in your own ability to do this, let us do it for you. Give us the facts. Talk to us just as you would to a prospective buyer. That is the kind of talk that makes profitable advertising. We'll look after the verbal frills. That's our business.

Advertise! The minute you stop advertising you lose ground. You may not feel this loss right away. But you must feel it in the end. Advertising is the dynamo of modern business.

You can't achieve anything worth while, whether it's peddling pills or discovering uncharted rivers, without advertising. If Columbus hadn't gone back and kicked up a racket about it, nobody in the Old World would have known yet that he had discovered anything.

Don't lose your grip. Noah was 600 years old before he knew how to build an ark.

If your proposition is one that should appeal to architects, builders, building owners, decorators, material and supply concerns, "The Builders' Guide" is the right medium for your advertising and cannot fail to bring you profitable returns.

Do not fear advertising as an expense, but court it as an asset, for that is really what it is—a value unseen, but determined from results.

PLACE AND VALUE OF THE TRADE PAPER.

"Eloquent speakers who have preceded me have told of the greatness of our American industries, and have rightly given to advertising a large measure of credit for our industrial and commercial supremacy.

They have spoken of the daily and weekly newspapers, the agricultural press, the magazines, the billboards, the street cars, and even the advertising novelties, as the forces that have played an important part in this wonderful upbuilding, but they have wholly missed the greatest force of them all—the trade and technical press of the country."—R. R. Shuman before the annual convention of the Associated Advertising Clubs at Omaha.

SOME MORE ADVERTISING "DON'T'S."

Don't try to do a million dollar business on a two thousand dollar basis.

Don't try to advertise a quarter page proposition in a three-inch space.

Don't belittle a big business reputation by running a piking little "ad" among piker competitors.

Don't overlook the fact that as a man is judged by his stationery, so a firm is judged by its advertising.

Small ideas, small methods, small men are becoming antiquated. This is the day of the broad outlook and big doings.

REAL GOLD UNMINED.

"I am here as the self-appointed representative of 900 trade and technical publications printed in the United States and circulated wherever the English language is spoken. How important they are in their relation to advertising may be understood when I tell you that they carry, in the aggregate, advertising to the amount of at least \$25,000,000 a year—one-eighth of all the advertising money that is spent for all forms of publicity in the country—and that these advertisers "stick" year after year because it pays them to stick.

I have bought, sold and written all kinds of advertising—pasted and printed, indoor and outdoor, consumer and dealer, technical and commercial—and I have reached the conclusion that there is more real gold as yet unmined in the trade press field than in any other field of advertising endeavor."—Extract from address by R. R. Shuman, before the annual convention of the Associated Advertising Clubs at Omaha.

Are you aware, Mr. Advertiser, that this paper circulates in 5,000 offices, reaches every architect of any prominence in the East and the Secretary of every architectural club and chapter in the country?

"The knowledge of to-day may be the ignorance of to-morrow. Then where are you unless you keep posted from day to day?"

The way to get money is to sell things to people who want things. People who want building material and building devices read "The Guide."

If you can persuade people to buy your goods you make money. "The Guide rounds up in its clientele the people you want to persuade. A certain amount of space and the right kind of selling argument does the rest.

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Dwellings (26), corner Hutchinson and Courtland streets, Philadelphia, \$97,500. Architect, private plans. Owner, Daniel Crawford, Jr., 701 North Sixth-third street, Philadelphia. CONVENIENCES IN POPULAR DEMAND

Prospective tenants and buyers want to know how they are going to keep warm in the chilly mornings and evenings of the early Fall and late Spring, when it isn't practical to have the furnace going.

If you can point to a Baseboard Gas Outlet in each room to which Gas Heating Stoves can be readily connected your Prospect is then assured of a quick, clean and economical method of getting the desired auxiliary heat.

It's the Long Fire Travel in the Burnham Cosy Comfort Boiler That Makes the Short Coal Bill

IF you can keep the hot gases and smoke travelling back and forth inside a boiler long enough to extract the bulk of their heat, and still not make the draft sluggish; it's plain enough that less heat will go up chimney and more heat go into your radiators.

That back and forth action is what we call fire travel. It's this long fire travel in the BURNHAM Cosy Comfort Boilers that has a lot to do with making their short coal bills.

Our Engineering Department is at your service in solving Heating Problems

EFFECTS OF GRADING OF SANDS AND CONSISTENCY OF MIX UPON THE STRENGTH OF CONCRETE

An interesting paper was read by Mr. L. N. Edwards, supervising engineer of bridges for the city of Toronto, at the recent convention of the American Society for Testing Materials, held in Atlantic City, June 26 to 29. The subject of Mr. Edwards' paper was "The Effects of Grading of Sands and Consistency of Mix Upon the Strength of Plain and Reinforced Concrete." The paper presented the results of three series of tests made by the Department of Works of the city of Toronto, under the direct supervision of Mr. Edwards. These tests were under taken with the object of securing information relating to (1) the influence of the grading of sand; (2) the effect of the consistency of mix upon the strength and physical characteristics of the concrete properties; and (3) the effect of varying the time of mix.

The author described the methods used and the results obtained, in considerable detail, and drew the following conclusions:

Common Practices Unreliable.

1. The commonly practiced "visual examination" test of sand aggregate for concrete is generally unreliable, since it gives at best only a superficial knowledge of the cleanliness of a given sand. Its adaptation to the determination of grading could be of value to the observer only after long experience in the granulometric analysis of sands.

2. The generally accepted practice of proportioning a concrete mix by volume, as, for

example, 1 part cement, 2 parts sand and 4 parts broken stone, is impracticable and unscientific, since it does not take into account the adaptability of the grading of a given sand to the production of a dense, strong and reliable concrete. Proportioning by volume, as commonly used, gives no guarantee of the production of a concrete having a desired strength, hardness, or other physical properties.

3. The strength, toughness, and durability of the concrete to be secured from the use of a given sand can be determined only by an actual test of that sand in a properly prepared concrete.

4. In field operations incident to spading, slicing, or otherwise compacting the concrete, the movement of the water content of the mass is intensified, whenever the sand aggregate contains insufficient fine material to hold the cement in suspension by the formation of an adequate amount of sandy paste. The free movement of the water tends to produce an improper distribution of the cement.

Amount of Water.

5. The use of a quantity of water sufficient to produce a concrete, the mortar component of which is of a saturated, sticky, semi-plastic consistency, is for most practical purposes required, in order to facilitate economical and efficient placing. This quantity of water is ample for the development of the proper functions of the cement. An increase in the

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

quantity of water used results in a proportionate decrease in the strength of the concrete. This decrease is in no sense a function of the proportions of the mix.

6. The excess water in an over-saturated concrete necessarily occupies space and thereby bulks-up the mass. By reason of its high surface tension, it forms water globules which, although somewhat affected by the weight of the concrete, are nevertheless distributed throughout the mortar component and are accumulated underneath the particles of the sand and stone aggregates and the reinforcing steel. By evaporation, this excess water ultimately disappears, leaving a considerable volume of water voids and cavities which constitute an extremely important factor in the strength and reliability of the concrete.

Bond Between Concrete and Reinforcing.

7. The critical failure of reinforced concrete depends upon the intensity of the bond existing between the concrete and the steel reinforcement. Concrete containing an excess of water not only develops less surface contact with the steel on account of the resulting increase in the volume of water voids and cavities; but, in additions, the excessive laitance produced by the water tends to accumulate around the reinforcement, thus contributing materially to a decrease in strength. This condition becomes further aggravated by reason of the tendency of the laitance to become less resistant with age.

8. For the various grades of concrete, the minimum ultimate strengths assumed in the modern practice of plain and reinforced concrete design are not assured by the commonly specified requirements for sand and stone aggregates, and by the present lack of uniformity and of efficiency in field methods and operations.

9. The results obtained show no definite relation between the compressive strengths of 1:3 mortar cubes, and the compressive strengths of the concrete produced from the same sands.

In the course of the paper the author took occasion to submit the following specifications for a cement to be used for general concrete purposes. These specifications assume that provision is made for the proper proportioning of the cement content of the mix in cases where cements failing to meet the strength requirements are used. They also assume that proper provision is made for the limiting of the water content of the mix to that required to produce a saturated, sticky, semi-plastic mortar:

"Sand shall be of hard, preferably silicious, material, clean, rough, free from dust, soft particles, vegetable loam or other deleterious matter. It shall consist of particles graded from coarse to fine, of sizes that will pass, when dry, a sieve having four meshes per linear inch. The grading of particles shall otherwise conform to the following:

"Not more than 80 per cent. shall pass a

We Drill Wells and Get Water Test Borings and Soundings

LET US SUBMIT PRICES

RIDPATH & POTTER CO

587 Bourse Building
Philadelphia, Penna.

sieve having 10 meshes per linear inch, not more than 55 per cent. shall pass a sieve having 20 meshes per linear inch, not more than 15 per cent. shall pass a sieve having 50 meshes per linear inch, and not more than 5 per cent. shall pass a sieve having 100 meshes per linear inch. Upon the 10, 20 and 50-mesh sieves an allowable variation of 5 per cent. will be permitted.

"Sand, when combined with a normal Portland cement and 1-inch broken granite, limestone or trap of good quality in the proportions 10 lbs. of cement, 21 lbs. of dry sand, and 35 lbs. of dry broken stone, thoroughly mixed with $4\frac{1}{4}$ lbs. of water for not less than 1 minute and molded into cylinders 6 inches in diameter by 12 inches long, shall develop a compressive strength of 1,300 lbs. per square inch when tested at the age of 7 days and a strength of 2,200 lbs. per square inch at the age of 30 days. Strength shall be determined from an average of five cylinders tested at each age. The cylinder shall be removed from the form 24 hours after molding and shall be stored in a moist closet or in damp sand until tested.

"Sand failing to develop the above strengths may, at the option of the engineer, be accepted for use, provided that the proportion of cement be increased by an amount sufficient to fulfil the strength test requirements."

ADJUSTING INDUSTRIES.

What is non-essential business? Many inquiries have been received by the Chamber of Commerce of the United States, asking as to the manner in which this would be determined by the Government, what course will be followed in withdrawing labor and materials from such industries as may be regarded as non-essential during the war for the necessities of industries essential to the war. No policy in this connection has been announced by the Government, but business throughout the country is eagerly awaiting an expression of opinion from the Federal authorities.

Before the business is classified as non-essential and deprived by active government of labor and materials the industry, through duly elected representatives, should be given an opportunity to discuss the matter; to learn the premises of the

Government and the reasons for action.

Waddill Catchings has expressed his opinion in the following terms: "No action except emergency action should be taken, except in accordance with some general plan, based upon a thorough survey of industry. If unnecessary hardship is to be avoided, if there is to be no discrimination, the Government should not act until a general plan has been formulated and made known to the business of the country."

The concentration of industrial energy toward winning the war appeals to all, and every industry can be relied upon to assist in bringing itself into adjustment with the war needs of the country. If the Government acts in this connection with sufficient dispatch the industries of the country may be given an opportunity to meet the needs of the emergency in a gradual manner, and after deliberate planning. With English experience as a guide, and with the unhesitating support which business has given to the Government in a national effort, full opportunity is afforded for deliberate planning and adjustment.

Where an industry is regarded as non-essential and must be deprived of labor and materials it is pointed out such deliberate planning may lead to the use of substitute materials or different processes of production. In this manner unnecessary hardship may be avoided.

It should be a cardinal principle that the normal structure of business should be maintained during these abnormal times as far as possible. Therefore, consideration should be given to the possibility of allowing non-essential business a proportion of its requirements of labor and materials so that some organization may be retained to be developed again upon the return of peaceful conditions.

Furthermore, when the Government is forced to deprive a business of materials and labor because it is non-essential, an effort should be made by the Government to place with the industry orders for product needed in the war. In this manner a helping hand may be given to business suffering solely through sacrifice for the common good.

In this same connection it may be said

Our specialty is Portland Cement that will stick and pass the City Department. **DAVID FRANCE CO.,**
Tasker Street Wharf, Delaware River, Philadelphia.

that if men are to be withdrawn from industrial communities where they have houses and gathered in manufacturing centres already congested there is created a great housing problem in connection with the production of war supplies. But if in placing the war orders effort is made to produce war supplies in the centers where labor is housed not only will congestion in munition centers be relieved, but there will be avoided, at the end of the war, the great problem of moving labor back to the normal producing centers.

One of the reasons for suggesting the formation of War Service Committees in industries was to bring about an early consideration of the above problems and to direct the attention of industries to the need in these abnormal times of preparing for diversified or unusual production to keep the industries intact during the war. Such committees could effectively present to Government authorities the manner in which those industries might well conform to war-time conditions. In a democracy it is certainly far better for industries to become adjusted to new conditions by co-operation between the industries and the Government rather than by compulsion of drastic and unprecedented Government action.

—“New York Real Estate Record.”

TOOLS OF INDUSTRY.

Economists recognize that it is possible only through increased production of living necessities to decrease their cost. Raw material, labor, and tools of industry are essential for production. Improved tools of industry in ever increasing number and variety have for generations past been eliminating waste in raw material and have been conserving labor.

the present exceptional demand for production on the one hand and a scarcity of raw material and labor on the other, an unusual development of tools of industry is the only alternative, and is now imperative. Public welfare demands this exceptional development of tools of industry in the present crisis.

Better tools of industry better mobilized means war munitions of all sorts supplied more promptly and in vast quantities. More factories of more efficient equipment always resulted in cheaper and better food and clothing. Better means of transportation and distribution makes them more available. More housing means not only lower rents, but also increased efficiency in labor through better health and morale.

Many building and engineering structures must be erected before mechanism can be installed, and they are indeed nec-

essary for the building and assembling of the mechanisms themselves. Buildings, hospitals, factories, railroads, etc., are tools of industry.

How can the construction industry, which while highly specialized, and poorly organized and decentralized, be adjusted to meet the needs of the day without shock and set-back to its effectiveness? Obviously, first, a thorough knowledge of the present day facts—actual conditions prevailing throughout the country—at least in the great industrial centers, is necessary. The movement instituted recently in New York to ascertain the facts in that industrial center regarding the demand for factories, warehouses, housing, etc., the available supply of materials, their cost and their substitutes—the supply of labor—transportation facilities—and money, which has been followed by the Association of Commerce of Chicago, has already spread to Minneapolis, Detroit, Louisville, Ky., and Worcester, Mass.

These are civic movements not confined to the construction industry line. They are along the lines of organization laid down by Director Gifford, of the Council of National Defense, and point toward centralization in a National Construction Advisory Board of some sort.

The consensus of facts and opinions thus crystallized will work towards public welfare and be of aid to the Government in the nation's main objective, the speedy winning of the war.

The October issue of the U. S. Bureau of Labor Statistics quotes a report from the United States Consul at London dated August 11, 1917, in substance as follows:

“Since 1906 there has been a decrease in the building of houses for the working classes. With the outbreak of the war practically a complete cessation of house building set in, except in munitions area.

“One of the most important questions and one now which has assumed political importance, is the housing of the working classes. The local Government Board has requested town and urban authorities throughout the country to report not later than October the housing requirements of the people in their towns and districts.

“It is admitted by the Board that 500,000 houses are now urgently wanted, but the Joint Committee on Labor Problems assumes that after the war at least 1,000,000 are necessary costing \$1,200,000,000. On the question of finance, Government aid has been promised. In the meantime a grant of \$97,000,000 has been asked for by housing organizations.

“The Committee's task will include the working out of the best scheme whereby large numbers of skilled laborers in the

building trades can be secured; the method of applying the policy of grants in aid; the consideration of evidence respecting particular areas where specially prompt measures are necessary and the amendment of by-laws relating to construction, etc.

“It is reported that at an early date Government approval will have been granted and that in order to prevent rents being higher than in pre-war times, financial assistance will be provided.”

—“New York Real Estate Record.”

STUDY THE ADVERTISING PAGES.

The average reader does not pay very close attention to the advertising pages unless he happens to be particularly interested in some product or is in the market for equipment or material. He is missing a part of scientific literature which offers suggestions as practical as the reading pages. He is also losing an opportunity of studying a subject which bears the most important relationship to every business on earth. No matter what line of work you may be engaged in, a knowledge of publicity and salesmanship is valuable. Every form of occupation to be made successful depends upon a degree of salesmanship. Study the advertising pages. They represent an expenditure of time, thought and money, which makes them well worthy of your attention.—“Municipal Engineering.”

Without energetic effort a man must remain in a rut and can never expect to share with his hustling, up-to-date competitor. Quoting the words of a gifted scribe: “Health attends the man who acts. Wisdom guides him. Hope frees him. Joy helps him. Power moves him. Progress marks him. Fame follows him. Wealth rewards him. Love chooses him. Fate obeys him. God blesses him. Immortality crowns him.”

Learn to advertise. If you feel unequal to the task of preparing the kind of copy you ought to have, let us prepare it for you. Advertising is our business. We are always glad to help men who are honest enough to concede that they do not know it all. And the service won't cost you a penny if you contemplate joining the army of “Guide” advertisers.

A retailer may fool himself by failing to charge all of his expenses into his cost of doing business, but his expenses will come out of his gross profits just the same.—Ex.

We know lots of men who have made money without the aid of advertising, but—they haven't made it since 1876.

As The Editor Sees It

THE housing situation shows signs of becoming serious. Among other logical consequences of our entry into the tremendous world struggle now waging in Europe we face the sudden upspringing of new industries, the expansion of old industries, the hasty creation of new and vast organizations on a scale to meet novel, extraordinary and unexpected demands. From a nation of peaceful shop-keepers we have become overnight, as it were, a nation of determined militarists and munition makers. We find ourselves transformed into a position of vast, solemn, and altogether unanticipated responsibility. We have not merely to organize and equip an army greater in man power than anything we have previously known, but we are obligated to devise means of transporting that army to foreign soil, which means ships, to provide it with food and clothing and equipment, which means more ships and to supply it with all of the necessities of the highly complicated thing now known as war, which means still more ships. To get these ships we face the necessity of building them, which means the expansion of old shipyards and the creation of new ones. To get them quickly means the multiplication of these shipyards and related industries upon a new and greatly-augmented scale. If our national responsibility stopped here it would be sufficiently impressive, but it does not. It goes further. It obligates us to feed, to sup-

ply and equip to a certain extent, to furnish raw and manufactured material to not only our own troops but to those of our Allies and to the peoples and the industrial organizations behind our Allies. This obligation embraces not merely food and munitions and textiles and steel rails and tractors and locomotives and submarine engines and ambulances. It means a thousand and one incidental things from lumber and copper and brass and rubber up to structural steel and finished devices. War has become tremendously, almost unbelievably, scientific, systematic, stupendous, complex. Fifty years ago an army was compacted of cavalry, infantry, artillery and commissary. The army of today is an organization with ramifications surpassing those of the greatest of industrial enterprises. Back of the men in the actual business of fighting stands a second army of engineers, chemists, surgeons, aviators, builders, camofleurs, miners, wireless experts, electricians, wire-workers, telephone and telegraph constructors, gas engineers and specialists of every sort, kind and degree. To meet the demands of one army so organized would be a task in itself. To meet the demands of a group of armies so constituted is a task of the most gigantic magnitude. Such a task the United States faces today and must continue to face until the foe of Democracy is beaten into submission and the eyes of the world turn again to the calmer pursuits of peace.

TO meet this demand there have sprung up almost by magic thousands of new industrial enterprises. Thousands of similar enterprises will come into being as the war goes forward. There will ensue a period of industrial expansion without parallel in American history. Each of these new plants, each of these expansions involves the concentration at selected points of vast new units of labor. These units must be housed. We know what happened at Bridgeport. We know what is happening at Chester, at Eddystone, and elsewhere. We know what is happening right now here in Philadelphia. Shall we wait as England did until the conditions become so acute as to demand Federal action? Or shall we do the sane and logical thing and meet the demand by action *now* and keep pace with it as we go along. There is a demand today in Philadelphia alone for thousands of new homes—a selling demand no prudent investing concern can afford to ignore. The renting demand is absolutely without parallel. This condition is due to become more acute and insistent as new industries come into being to concentrate new armies of labor. Where is the investor who a few short years back was clamorous for a prudent outlet for idle funds? Could there be a better outlet than the renting and selling demand now facing us on all sides? What has happened to the operative builder? Five years ago we used to say that Philadelphia was over-built. Will

KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

anybody dare to say that the condition exists here today? We are not unmindful of the fact that building under existing conditions presents certain difficulties. Car shortages and freight congestion have a tendency to make deliveries of material a trifle precarious. Materials are higher than ever and labor, skilled and unskilled, is scarce and not easy to handle. But even these conditions are yielding to improved organization. It should not be forgotten that war on the scale we now know it is too new to us to be met at short notice with the maximum of national efficiency. England muddled for a year. We may be counted on to flounder in unexpected situations for a time. But as we push ahead system and order and method and the efficiency that is born of these will come to our assistance. If the great money-lending concerns are not incredibly commercialized they must perceive that the opportunity that is now theirs involves a moral and patriotic not less than an economic obligation. Workmen cannot be expected to develop their highest efficiency unless they are properly housed. This nation cannot win the titanic struggle in which it is immersed unless it is enabled to bring to the task the utmost measure of efficiency of which it is capable. The moral is Build, Build, now! Build for sale and build for rental. Get the operators busy in all sections. Failure to meet the demand now crowding upon us spells economic disaster in the months ahead. Let us ponder the blunder of England 'ere it is too late.

* * *

JOHAN IHLDER, Secretary of the Philadelphia Housing Association, sums up the conditions now facing Philadelphia in the following words:

In housing, the war has accentuated our problem, and especially along three lines. Along all of these lines the problem has been becoming more and more accentuated during the two or three years preceding the Spring of 1917. So we have had some opportunity to study it in its new phases: These are:

1. A rapidly increasing concentration of population in existing industrial centers.
2. The creation, almost over night, of new industrial communities.
3. A rapid increase in the cost of building and of public services.

To these must be added, in many places, particularly the smaller ones, a spectacular rise in land values.

The stories of Bridgeport and of Flint are familiar and are typical of what is now taking place in many other industrial centers. Even Philadelphia, for all its size, has begun to feel the pinch. Two years ago it was overbuilt. Today it has

few vacant houses for the wage-earner, and in some districts there is already overcrowding. Yet every day brings news of more factories and plants, of extensions to old ones. Meanwhile, the amount of new building construction is below normal. If present tendencies continue, and there is every evidence that they will unless energetic action is taken, Philadelphia must soon face conditions that will seriously threaten the health and strength of its wage-earning population."

* * *

IT will do more than seriously threaten the health and strength of our wage-earning population. It will, if persisted in, seriously arrest the city's industrial development. If big, new industries cannot come to Philadelphia with an assurance of proper housing accommodations for its labor, then these industries will go elsewhere. It is amazing that the investment capitalists of the city should be unable to perceive the logic underlying so simple a proposition in plain business economics.

* * *

THE *National Builder* has an article in its November issue showing in what manner England is facing the demand, now acute in the United Kingdom, for the housing of its working classes.

One of the most important questions in Great Britain for several years past has been that of housing the working classes says the article. This subject is now studied by a committee appointed by the Government, while the local government board has requested town and urban authorities throughout the country to report not later than a date in October, the housing requirements of the people in their towns and districts.

It is admitted by the board that 500,000 houses are now urgently wanted, but other authorities, including the Joint Committee on Labor Problems after the war, estimate that not less than 1,000,000 houses are necessary, costing \$1,216,625,000.

Government financial aid has been promised, although no stated amount has been named pending the report of the newly appointed committee. In the meantime a grant of \$97,330,000 has been asked for by some housing organizations.

The Government, in November, 1914, decided in favor of a free grant from the exchequer, as well as loans, to permit of local councils charging customary rents without incurring loss; and while that policy is still in force it has, so far, only affected certain munition areas.

It is recognized that bad housing has led to high infantile mortality, notably

in the northern industrial centers. In three Scottish districts there is urgent need of accommodation for 100,000 workers.

* * *

SINCE 1906 there has been a decrease in the building of houses for the working classes, due, it is stated, to previously overbuilding, which led to towns being burdened with empty buildings which, paying no rates, increased the taxable proportion payable by those that were occupied.

The new land valuation and taxes authorized under the finance act of 1909 proved an additional cause in the decline in building small houses, which for some years previously had formed the vast majority of all new houses erected by private builders, who were financed chiefly by money raised by mortgages on the property. The effect of the new act, however, was to close this source of obtaining capital, and the rate of building in about 40 big towns declined by over 20,000 annually.

* * *

THE committee's tasks will include the working out of the best scheme by which large numbers of skilled laborers in the building trade can be secured after the war ends; the provision of 120,000 cottages for workers on the land; the supply of adequate accommodation for workers in new industrial districts which will be opened up; the method of applying the policy of grants in aid; the consideration of evidence respecting particular areas where especially prompt measures are necessary; amendment of by-laws relating to construction; and types of buildings in urban and rural districts. It is hoped to avoid monotony in design, and in this regard it is reported that numerous designs and plans already exist of small houses combining the utmost utility with good appearance.

It is reported that Government approval will be granted at an early date to plans involving the erection of not less than 500,000 houses within the first two years after the conclusion of the war, and that, in order to prevent rents being higher than in pre-war times, financial assistance will be substantially provided.

There's one variety of advertiser who gets our Angora. This is the chap who can't afford a large space and doesn't advertise, as a regular thing, because a small space "isn't seen." Some of the biggest advertisers we have started out with small space. Ask them whether the small space is seen. If advertisers had to wait until their businesses developed to full page stature before advertising, there'd be mighty few advertisers. The big man becomes big by growth. And growth starts with the seed.

EDITORIAL NOTES

In connection with the British Government's study of the technical questions in bearing upon the building of the large number of houses for industrial workers after the war, the President of the Royal Institute of British Architects has, upon request from the authorities, nominated Sir Aston Webb to serve on behalf of the R. I. B. A. on the committee which has been set up by the Local Government Board. A committee of the R. I. B. A. has been constituted by the Council and is now considering the question from the architect's point of view. The committee consists of the President, the Honorary Secretary, Sir Aston Webb, Professor Abercrombie, Professor Adshead, W. R. Davidge, W. A. Harvey, Arthur Keen, H. V. Lanchester, D. B. Niven, G. Gilbert Scott, J. W. Simpson, H. D. Searles Wood, George Hubbard, and Percy B. Tabbs. The allied architectural societies have been asked to nominate representatives to serve on the committee, while the principle of local committees to deal with local problems and keep in touch with the central committee has been recommended for adoption.

The South American city of Buenos Ayres exempts from taxation each year the most beautiful building erected during the preceding twelve months, and in addition awards a medal to the architect.

Isaac S. Taylor, architect, who died October 28 in St. Louis, Mo., was the chief architect of the World's Fair, held in that city.

London advices say that between January 1 and August 15 this year the Germans imported into Belgium through Holland over 3,000,000 tons of sand and gravel. In the pre-war years the annual consumption of sand and gravel for road maintenance was 1,320,000 tons. In addition to the importations through Holland, the Belgian quarries, it is stated, are being worked to their maximum capacity, in excess of 5,000,000 tons, and large quantities are entering Belgium over the German roads.

Albert E. Davis, architect, in a card to the trade, celebrates a thirty-year period of practice in one locality in New York City—258 East 138th street. During that period the Bronx has grown from 70,000 to 700,000.

The Bethlehem Lime and Supply Company, of South Bethlehem, Pa., has opened an office and yard for the distribution of lime, cement, terra cotta pipe and general building supplies at the junction of Locust street and the P. & R. R. R., South Bethlehem.

John Bacon Hutchings & Sons, architects, of Louisville, Ky., have closed their office until further notice. E. T. Hutchings, of the firm, has received a captain's commission in the Engineering Officers' Reserve Corps, United States army.

The resumption of speculative construction is a welcome sign of better times in store for the allied building interests, says the New York "Real Estate Record." It is sincerely to be hoped that the work now started will prove itself to be the commencement of a structural endeavor that will not be permitted to cease until there is a sufficient supply of living accommodations to fill all current demands. New York City is to-day underbuilt along certain definite lines, and the principal one is the provision for housing the rapidly growing population. This applies with equal force to suburban districts, within reasonable commuting distance of this city, and its immense commercial interests, where a similar demand exists. It will require a large volume of new construction, involving the erection of many apartment houses and one and two family dwellings to supply the demand, and it will be a long time before the city is built up to its housing capacity.

The Niles-Bement-Pond Company bought about fifty acres at Kearny, N. J., fronting on Lincoln Highway and Hackensack River. The property lies midway between Newark and Jersey City, and is directly opposite the United States Steel Company's Federal Shipbuilding plant. More than a year has elapsed since negotiations were first started. The buying company will erect on the site a plant for the manufacture of cranes and dummy engines.

Greene-Wolf Co., Inc., Hudson Terminal Building, New York City, announces that it is organized to conduct a general business in iron and steel.

Several meetings have been held in Washington between the Government and large employers of labor in the Middle West and Pacific Coast. These conferences were instituted for the purpose of considering the waiving of certain portions of the law, so as to allow the importation of 2,000,000 Chinese coolies during the period of the war. It was thought that this might prove a solution of the labor problem.

At the regular monthly meeting of the New York Building Managers' Association, held at the Fifth Avenue Building, William W. Lighthipe, of the Otis Elevator Company, was the principal speaker.

The Dixon Crucible Company, in Jersey City, closed down one day last month, throwing 1,800 people out of employment, because of the strike of the employees of the coal company serving them.

Although the reports of the current week have indicated a slight falling off in the volume of new Government work placed under contract, the deficiency in a great measure has

been made up by the amount of private and semi-private building that has been put forth. The Government has its program of essential military construction well advanced, and while there will be a considerable volume of additional work brought out from time to time as the necessity arises, the bulk of the projected work is already under contract. The temporary construction, such as training camps, cantonments and similar projects, are practically completed and the work now in hand involves structures that will become permanent bases to provide for the greatly enlarged military establishment that this Government will in future support.

The material markets have been quiet during the week, but as a rule the situation is more hopeful than it has been. Certain lines have already commenced to feel the effect of greater structural activity through increased orders. Prices are generally firm and likely to hold for the balance of the winter at least.

The Eastern Association of Glass Distributors held a meeting at the Hotel Astor, which was largely attended by plate, window and wire glass dealers. Manufacturers and jobbers expressed the greatest concern regarding the possible Government decision in classifying flat glass of all kinds among non-essentials, thereby curtailing to an unknown degree the usual production. Window glass factories had arranged to start annual operations on December 8, but in view of the uncertain conditions such start may be indefinitely postponed. A joint meeting of the Eastern and Western divisions of the Association of Glass Distributors with the manufacturers will be held in Pittsburgh on December 11 and 12, at which time it is expected important measures will be taken for consideration. In view of the serious situation an advance in price is expected.

Walter E. Spear, department engineer in the Board of Water Supply, was recently commissioned a major in the Engineer Officers' Reserve Corps, and has been stationed at Camp Upton, Yaphank, L. I.

H. F. Bardwell has been appointed New York district manager for the Vanadium-Alloys Steel Company, of Pittsburgh and Latrobe, Pa., with offices at 30 Church street, New York City.

One of the significant features of the existing business and industrial condition in practically all sections of the country is the absolute need for additional housing facilities, particularly in the great manufacturing centers. Industrial expansion, brought about by the war, has drawn thousands of families to the producing centers. These must be adequately housed in substantial structures or the efficiency of the workers, both physical and moral, will be impaired. The provision for housing these families has become a problem of paramount importance to the communities as well as to the employers and steps are being taken to co-operate in an effort to re-

lieve the situation of many of its unpleasant phases. The solution will mean the erection of a great number of dwellings in many cities and the work will involve the expenditure of millions of dollars for labor and materials, all of which will assist in making certain the predicted building movement.

* * *

Evidence continues to multiply that a marked revival of building construction is close at hand after a long period of doubt and anxiety for the industry. During the past two or three weeks the signs of a greatly increased activity have been significant of a substantial movement and the reports of the current week confirm the recent predictions, since they have crystallized into a number of tangible structural operations. Practically all lines of building endeavor have experienced the force of the resumption of activity as evidenced by the diversified types of projects that have been introduced since the movement commenced. Furthermore, the condition is not localiz-

ed, but extends its scope of influence over a wide territory.

* * *

The American Society of Mechanical Engineers will hold its annual meeting at the Engineering Societies Building, December 4-7, 1917.

* * *

Captain Aymar Embury, 2d, has been assigned to the department of camouflage of the Engineer Corps.

* * *

Major Evarts Tracy, of the architectural firm of Tracy & Swartwout, was recently appointed by the War Department to take charge of the department of camouflage, and has reported to Washington for further orders.

* * *

Dr. David B. Steinman, formerly assistant engineer in the construction of the Hell Gate Bridge and subway construction in New York City, has been appointed associate professor of civil and mechanical engineering in the day session of the College of the City of New York.

CONSERVATION AND THE COAL BIN

The contents of the coal bin and the rate at which it empties is always a matter of concern to the householder. This year its value approximates that of his other jewels, if he is so fortunate as to possess them.

Every one knows that it is much easier to burn coal than to get the full amount of heat from it; that there is no definite relation between the coal that is burned and the heat which reaches the rooms to make them warm and comfortable; that much coal is simply burned,—wasted. With the threatened scarcity of coal the leaks must be stopped this year.

After the first cold spell and before the severe winter really begins is the "last chance" for finding and stopping the leaks economically.

In cheaply built houses where thoroughly good building paper or insulating quilt have not been plentifully used, draughty cracks will be found which are the cause of much wasted heat. Sometimes a projecting bay or sideboard seems almost like an open door when the wind is in certain directions. In one such instance an examination on the outside showed there was no reason why the wind should not come in. A layer of building quilt carefully placed under the projecting bay and sheathed underneath quickly made a different temperature in the room.

A single thickness of glass at the windows is always a source of heat loss. As it may be helpful to others, we give one home builder's experience, who says:

"We have estimated that every storm window on the north and west side of our house has saved us a quarter of a ton of coal a winter. In one season we paid the cost of the windows in the saving of fuel, for they

average only from \$3 to \$5, according to the size.

"Then there are inside problems. Owing to settling and shrinkage of the wood, the baseboard and floor are often separated by a quarter of an inch of open space. That leak coming in near the floor chills the whole atmosphere. The remedy, as we found, is simple. Boil up a lot of old newspapers into a soft, pasty mass, add a little glue when nearly ready for use to give it consistency, and then a little coloring matter to imitate the wood trim. Your painter can tell you what you need to secure a certain shade to imitate oak, chestnut or pine.

"Stuff this pulpy mass in between the floor and baseboard, and between the wall and baseboard until every chink and crevice is filled. If it is the color of the wood trim, it will never be noticeable.

"The leaks will be stopped up so effectually that you will find your floors much warmer. Nearly all floors are double, and with a layer of building paper between, the leak of cold air rarely comes up through them. The air enters from the corners and sides around the baseboard and windows.

"The windows can be treated in the same way with this paper pulp. If necessary to get at it, take a sharp knife and loosen the wall paper where it meets the casing, and stuff the filler in between the wall and wood frame of the windows. Then, when it has dried, replace the wall paper and paste down neatly. The difference will be so marked that you will immediately find comfort in rooms that were before hardly livable."

Furnace Efficiency.

It is estimated that one-quarter of the coal used to heat our houses is wasted. Even the

busy man can afford, this year, to study his heating problem for himself and know how his furnace should be fired and what is the kind of coal which is adapted to give the best results in his special conditions. The money which is dropped on the street is not wasted, somebody finds and uses it; but the coal which is burned without giving its return is an absolute waste.

Each individual heating plant and each chimney makes its own set of conditions, so there are no universal rules to be laid down. A little understanding of first principles, and a large application of common sense are the first requirements, in the management of a heating problem. It is not easy to find outside help. Call up the evening schools and the Y. M. C. A. and they are likely to tell you that they have no classes in the study of combustion as applied to house-heating, nor in the stoking or firing of furnaces; that they have found no demand for such classes. You will perhaps get most help from your local coal dealer, for he will give you the benefit of his large experience, and will apply it to your particular problems.

"Burn all the coal you buy,—and use all of the heat from the coal you burn." That is the whole proposition. To get at it systematically the coal, before it is burned, and the coke and ash that is left, may each be weighed separately, the efficiency determined and applied to your problem, if the scientific advice necessary is obtainable.

Much fuel waste is due to improper use of fire tools. The slice bar,—in common parlance, "the poker,"—is abused almost every time it is used, according to Joseph W. Hays, combustion engineer, who says: "The purpose of the slice bar is to cut or slice the fuel away from the grates and to cause the fine ash to fall through the grates. Under no circumstances dig up the fuel with it. Under no circumstances use it unless the condition of the fire calls for it. The good fireman can tell from the dark spots in the ash pit when and where the fire needs slicing."

Much of the heat generated is lost through radiation unless the furnace and pipes are jacketed so as to thoroughly insulate them. "One or two inches of asbestos plaster covered with canvas, and the canvas covered with paint, makes a serviceable overcoat for a boiler setting." Let the householder use the same degree of common sense with his heating proposition that he does in his business.

SOME MORE ADVERTISING "DON'T'S."

Don't try to do a million dollar business on a two thousand dollar basis.

Don't try to advertise a quarter page proposition in a three-inch space.

Don't belittle a big business reputation by running a piking little "ad" among piker competitors.

Don't overlook the fact that as a man is judged by his stationery, so a firm is judged by its advertising.

MAKERS OF TILE SUBMIT PROTEST

Manufacturers in Convention Insist Their Product is Essential to Building

Decision to make representations to the Government in order to forestall the placing of tile upon the list of "non-essentials" which is now being prepared by the Council of National Defense, was taken by the annual convention of the Eastern District of the Tile, Mantel and Grate Association which was held at the Schlitz Hotel, Atlantic City, N. J.

The discussion was led by R. A. Fowler, of Philadelphia, a member of the directorate of the association. He maintained that tile has become a necessity for the promotion of sanitation. This fact has been recognized by the Government, he said, in its specifications for the new army cantonments. The convention registered its protest against any backward move from the advance that has been made recently along sanitary lines.

There were about fifty members present. They evinced their patriotism by the adoption of a resolution to uphold the President.

It was offered by James J. O'Keefe, a member of the Board of Directors, and was as follows:

"Whereas, For reasons beyond the control of any one individual, but through surrounding influences of the great world war we have been drawn into the conflict for the purpose of bringing to a close the struggle and forever after making the world safe for democracy; and

"Whereas, The situation has placed upon our worthy President, Woodrow Wilson, a heavy responsibility, which demands the full support of every loyal citizen; therefore be it

"Resolved, That we assembled in convention pledge our full and undivided support and influence to hold up the hands of our President in his endeavors to lead us on to victory."

The question of the amalgamation of the unionized tile setters with the International Bricklayers and Plasterers, which has been advocated by the heads of the American Federation of Labor for the purpose of centralization of effort was also discussed and urged as expedient by Mr. Fowler. While no definite action was taken the association inclined to a favorable view of the matter, as was indicated by the general discussion.

Trade conditions were discussed by President A. W. Walker, of the Tile Manufacturers' Association, with headquarters at Beaver Falls, his remarks being directed particularly to the matter of credits. President Robert Beck, of the Interstate Mantel and Tile Dealers' Association, with headquarters at Chicago, and First Vice-President J. W. Lantry, of New York, were also present.

The officers of the association were re-elected as follows: President, A. H. Siemon, of Baltimore, for his sixth year; vice-president, M. I. Ryan, of Philadelphia, for his second year, and secretary-treasurer, E. E. Elliott, of Washington, for his fifth year. The following members of the Board of Directors were re-elected: James J. O'Keefe, of Atlantic City; H. N. Francis, Richmond, Va.; C. W. McCauley, Wilmington, Del.; J. A. Marrian, Jr., Baltimore, and R. A. Fowler, of Philadelphia. In addition the following were chosen to increase the membership of the directorate: A. P. Bell, of Philadelphia, and G. Bonney, of Norfolk, Va.

The association held its annual banquet with President Siemon as toastmaster. Wives of the members, about 15 in number, were present. The association voted unanimously to return to Atlantic City next year.

SELECTION OF TRADE-MARKED OR DEFINITE BUILDING MATERIALS

The disappointment of clients, consequent loss of the architect's prestige, and a multitude of minor evils, result too frequently from the "or equal" clause, still used to some extent in building specifications. When after thorough investigation an architect is convinced that a certain article or material is exactly suited to the needs of his clients it would seem that he should say so without hesitation or further discussion. To specify what is right, "or equal," in the first place discredits the architect's judgment and experience and is a tacit admission that he may have committed at least a technical error in specifying a particular article. From the time this iniquitous clause is made public until construction of the building is practi-

cally complete the architect must, to keep within the spirit of the specifications, listen with whatever patience he can command to the rival claims of each manufacturer whose goods are possible components of the future building. And then he must use his own judgment as to a possible substitute just as he presumably did when first drawing up the specifications. After such reflection, the old excuse that the "or equal" clause is inserted to give others a "chance" and to prevent charges of favoritism loses its potency. Such accusations are as old as tradition, and now, as then, should have no weight where motives are just and sincere. When a reputable doctor prescribes a given drug under given conditions no one thinks of charging him with

partiality toward its manufacturer, and similarly an architect should be able to specify a definite article without having his motives impugned, or, if they are, he should be able to rise above such malicious insinuations.

But when a certain article or material has been selected, how is the architect or his inspector at the building, to know that no substitution has been made by an unscrupulous contractor or dealer? In these days of clever imitation even the most experienced superintendent may be readily deceived by mere casual inspection, and exhaustive tests of each item at the building are impracticable. The only satisfactory answer to the dilemma seems to be the exclusive use of trade-marked materials, or materials which are clearly marked as to quality or grade by the manufacturers. An article that is not good enough to be trade-marked, or bear evidence of grade backed by the maker, is not good enough to specify. Aggressive manufacturers in nearly all lines of trade have found some method of distinguishing their products and thus have accomplished what might be termed four-fold protection. By preventing substitution of another article for that of their own manufacture, they assure to themselves the full benefit of their extensive advertising, they assure to the consumer the satisfaction for which he is paying, they assure to the architect certainty and ease of identification, and they assure to the contractor and dealer freedom from possible charges of dishonesty.

We believe that the time is coming when all manufactured articles entering into high class construction will be readily identified by a trade or other distinguishing mark, and the use of all others generally avoided. Even now the adoption of a rule to use only materials falling under the above classification would not seriously restrict an architect in his selections.—"American Architect."

THE VALUE OF A NEW BUILDING TO A BANK.

Increase in Deposits is Directly Traceable to Modern Quarters, which are also an attractive Advertisement.

The value of new banking quarters was recently made the object of a nation-wide investigation. A questionnaire, touching on the following points, was sent to a list of financial institutions which had of late either erected new structures or materially improved their old banking quarters:

1. What, if any, is the advertising value of a new building or improved quarters?

2. Other things being equal, do you believe that the bank with the new building is the one most favored by depositors?

3. Have deposits increased or decreased since the occupancy of the new quarters?

4. Would you attribute all or any part of this increase, if any, to the attraction of the new quarters?

With but little variation, and only slight reservation, or exception, all of the banks

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Residence, Chestnut Hill, Philadelphia. Architects, Drukenmiller & Williams, 1533 Chestnut street, Philadelphia. Owner, name withheld. Stone, 2½ stories, 45x52 feet, slate roof, vapor heating, hardwood floors, electric lighting, tile work. Plans in progress. Architects will take bids in one week.

Residence (alt. and add.) and Garages (4), Thirty-sixth and Powelton avenue, Philadelphia. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, name withheld. Brick and stone, 3 stories addition, 13 x15 feet, slag roof, hot water heating, combination lighting, tile and marble work, parquetry and cement floors, stone foundations, iron stairs; garages, 12x20 feet, brick, 1 story. Architect has received bids.

Store Building (int. alts.), 258 N. Broad st., Philadelphia. Architect, Philip S. Tyre, 1509 Arch street, Philadelphia. Owners, General Realty Co., Philadelphia Stock Exchange Building, Philadelphia. Consists of interior alterations, mill work, store fixtures. Plans in progress. Architect will take bids in about one week.

Reservoir, Navy Yard, League Island, Philadelphia. Architect, private plans. Owners, U. S. Govt., Bureau of Yards & Docks, F. R. Harris, Chief, Navy Department, Washington, D. C. Reinforced concrete and steel, 2,000,000 gallons capacity. Low bidders: C. E. Weed, P. O. Box 7, Albany, New York, \$45,350; time, 100 days; Warren-Moore & Co., Colonial Trust Building, Philadelphia, \$46,921; time, 120 days.

Garage, 942 Porter street, Philadelphia, \$10,000. Architect, private plans. Owner, A. Kaplan, 4800 Parkside avenue, Philadelphia. Brick, 1 story, 60x160 feet, slag roof, cement floors, steam heating, electric lighting (gasoline storage system reserved). Owner will sub-let all contracts.

Manufacturing Building (alts. and ext.), Twentieth and Indiana avenues. Architects, Stearns, Woodnut & Schmol, Stephen Girard Building, Philadelphia. Owners, M. L. Bayard & Co., Pennsylvania Building, Philadelphia. Brick, concrete and steel. Plans in progress. Too early for details.

Residences (4), Tulpehocken and Baynton streets, \$12,000. Architect, private plans. Owner, Chas. H. Eekman, 2126 North Sixteenth street, Philadelphia. Brick, 2 stories, 16x32 feet, slag roof, hot water heating, combination lighting, hardwood floors. Owner is sub-letting.

Time Office and Dispensary Building, Tacony, Phila. Architect, Thos. B. Lippincott,

1505 Arch street, Philadelphia. Owners, Tacony Ordnance Corp., Tacony, Phila. Stone foundations, brick, 1½ stories, 73x32 feet, slag roof, steam heating, electric lighting, tile work, cement and wood floors. Architect taking bids, due as soon as possible. Barelay White & Co., 1713 Sansom street, and F. W. Mark Const. Co., Finance Building, are figuring.

Laboratory, Tacony, Philadelphia. Architect, Thos. B. Lippincott, 1505 Arch street, Philadelphia. Owners, Tacony Ordnance Corporation, Tacony, Philadelphia. Stone foundations, brick, 2 stories and basement, 25x32 feet, slag roof, steam heating, electric lighting, cement and wood floors. Architect taking bids, due as soon as possible. Barelay White & Co., 1713 Sansom street, and F. W. Mark Const. Co., Finance Building, are figuring.

Building, 106 Chestnut street, Philadelphia. Architect, Alfred Lewis Ward, Stephen Girard

Building, Philadelphia. Owners, C. M. Plowman & Co., 242 Chestnut street, Philadelphia. Consists of interior alterations to second floor, mill work, partitions, steam heating, hardwood floors, painting. Architect will sub-let all contracts.

Elevated Stations (4), Frankford Elevated, Philadelphia. Architects, Department of City Transit, Bourse Building, Philadelphia. Owners, City of Philadelphia, Department of City Transit, Wm. S. Twining, Director, Bourse Building, Philadelphia. Brick, reinforced concrete, stone and terra cotta, 2 stories, tile and slag roof, cement floors, hollow tile, marble and terrazzo work, rolled steel sash and skylights, hollow metal sash and doors, fire doors, iron stairs, cement floors, hollow tile, safety treads, roof ventilators, metal ceilings, wire work, ornamental iron work (electric work and plumbing separate bids). Plans completed. Owners will take bids in about one week.

BOTH PHONES

LOWELL BLEACHERY, LOWELL, MASS.
Covered with a Barrett Specification
Roof. Planned and constructed by
Robinson & Robinson, Lowell, Mass.

No Building Is Better than Its Roof

TO demonstrate our confidence in Barrett Specification Roofs we now guarantee them for twenty years.

This guarantee means that owners of buildings are exempt from all expense of maintenance or repairs for that period.

This protection is absolute because it is covered by a Surety Bond issued by the U. S. Fidelity & Guaranty Company, one of the largest surety companies in America.

A roofing contractor in order to secure this Surety Bond for the owner must be satisfactory to us and must construct the roof under the supervision of one of our inspectors.

This insures good workmanship, the proper

amount of waterproofing materials, and will result in a roof that will last far longer than the guaranteed period.

We now give this bond on all roofs of fifty squares or over in all towns in the United States and Canada of 25,000 population and over, and in smaller places where our Inspection Service is available, the only provision being that The Barrett Specification dated May 1, 1916, shall be strictly followed.

If you want a roof that will last for twenty years or over, give your architect or roofing contractor a copy of The Barrett Specification dated May 1, 1916, and tell him to lay such a roof and secure for you a 20-Year Surety Bond. Then your building will be covered with the best and most economical roof it is possible to lay.

Further information upon request to nearest office.

CONVENIENCES IN POPULAR DEMAND

Prospective tenants and buyers want to know how they are going to keep warm in the chilly mornings and evenings of the early Fall and late Spring, when it isn't practical to have the furnace going.

If you can point to a Baseboard Gas Outlet in each room to which Gas Heating Stoves can be readily connected your Prospect is then assured of a quick, clean and economical method of getting the desired auxiliary heat.

Sixteenth street, is figuring, in addition to those previously reported.

STARTING OBSTINATE SCREWS.

Many methods have been given from time to time as to the best way to "start" screws, and, of them all, the writer has come to the conclusion that the use of a good solid punch with a flat head of the same size as the screw's, and a good heavy hammer, is the best means to adopt, says a contributor to "Everyday Mechanics." Suppose, for instance, we have to take an ordinary house door off its hinges so as to get at its bottom edge to "ease" it (i. e., plane off a bit), in order that it can clear the carpet or door mat, and thus swing easily. Take the punch in one hand, and place it fair and square against the head of the screw, and then give it a good blow with the hammer. This is more easily said than done, if one is not at home with a hammer; for there is an instinctive fear of one's own fingers suffering! Therefore, in such circumstances, instead of an ordinary punch, procure, say an old ¼-inch bolt, and place it so that while you hold its threaded end, the head of the bolt rests upon the screw's head. Then your fingers being well out of the way, a good blow may safely be delivered, and most probably will be, simply because knowing that no harm will occur to your fingers, there will be no hesitation in striking, and a true blow will result. The shock of such a blow has the effect of bending down the rust joint which is causing the screw to adhere so firmly to the wood. Once this joint is broken, or "started," as the mechanic would say, the rest becomes comparatively easy. It must be remembered, however, that a heavy hammer is necessary

It's the Long Fire Travel in the Burnham Cosy Comfort Boiler That Makes the Short Coal Bill

If you can keep the hot gases and smoke travelling back and forth inside a boiler long enough to extract the bulk of their heat, and still not make the draft sluggish, it's plain enough that less heat will go up chimney and more heat go into your radiators. That back and forth action is what we call fire travel. It's this long fire travel in the BURNHAM Cosy Comfort Boilers that has a lot to do with making their short coal bills.

Our Engineering Department is at your service in solving Heating Problems

The world is just chock full of men who failed because they expected buyers to romp right in and ask for goods. Modern business spends big money simply to get the buyer interested knowing that sales follow.

The Value of a New Building to a Bank

(Continued from Page 789)

from which an answer was received replied in the affirmative to each of the questions.

One bank considers its building as its "best advertisement for many years to come," and says that its value in this respect "cannot be estimated in dollars."

An officer of another institution says: "The advertising value of a new building or improved quarters is, in my opinion, very high. People like beauty, and an imposing banking room appeals to most for the reason that a bank is supposed to represent the accumulated wealth of its community. Cheap equipment indicates a poor or cheap bank in the eyes of many."

Deposits, as a matter of cold figures, have in most cases shown positive and important increases, judging from the answers to question three. While a number of those questioned merely replied that deposits had increased, others gave actual figures.

Deposits of one bank, for example, increased from \$6,500,000 to \$9,500,000 since the erection of a half-million dollar building. Another's deposits increased from \$6,000,000 to \$12,000,000. Still another reported an increase of \$1,500,000 and another an increase of forty per cent.

It would be a fallacy to state that all of these increases were due to the new buildings. There were undoubtedly other factors; but all things being equal, the bank with attractive quarters and up-to-date modern equipment secures the most business.

Of course, it must be borne in mind that, to be successful, the preliminary planning of a banking room must receive competent consideration. In order to insure the greatest facility and economy of operation, it is necessary that the designer and builder have thorough knowledge of the routine procedure of the banking business. A bank building may be most impressive in appearance, yet possess faults of arrangement which will cause permanent inconvenience and dissatisfaction to its occupants.

The result of Mr. Warren's investigation is fairly conclusive evidence that there is a real commercial value in properly housing a banking institution. Better facilities increase the loyalty of old customers and attract new accounts. They make for greater efficiency among employees and make pleasanter for customers their transactions with the bank. They increase public confidence in the soundness and strength of the institution. They make for increased profits, satisfied directors, well-pleased stockholders.

The obvious answer is: Build now!

The prosperous, the great, the wise,
You may have noticed, advertise!

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

Proposals

INVITATION FOR PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., November 30th, 1917.—Sealed proposals will be opened in this office at 3 p. m. January 28th, 1918, for the construction of the United States post office at Sunbury, Pennsylvania. Drawings and specifications may be obtained after December 17th, 1917, from the custodian of the site at Sunbury, Pa., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Our specialty is Portland Cement that will stick and pass the City Department. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

RATIO OF BUILDING COSTS.

Many home owners who have been compelled to give up cherished ideas about certain parts of the house, when building, could have saved money enough for their hobbies, had they possessed an accurate table showing the ratio of costs.

Beamed ceilings may often be bought with the money saved on some other part of the house without weakening the structure or detracting noticeably from its appearance. Sometimes, according to architects, too much money is spent on one part of the home and too little on another.

R. F. Whitehead, an Eastern architect, has worked out a table of ratios for builders, showing the relations of the cost of each structural unit to the whole cost of the home. His results, published in "The Independent," show how a home may be built on the budget plan. He has found that there are limits to the cost of a house that is built on a moderate priced lot and declares that on the other hand, no more than 40 per cent. of the whole home price should be invested in the site.

By taking averages he has compiled the following table:

Budget for a \$10,000 House.

	Cost.	Per Cent. of Total Cost.
House	\$10,000	59.7
Lot	5,000	30
Mason work.....	\$3,200	19.6
Carpenter work...	3,800	22.4
Tile work	260	1.4
Plumbing	800	4.6
Heating	750	4.3
Electric work.....	250	1.3
Tin work.....	240	1.2
Painting	700	4.2
Architect's fee	750	4.4
Wall paper, etc.	250	1.3
Fixtures	300	1.7
Grounds	500	2.9
	\$16,900	99.3

The construction of such a house, Mr. Whitehead contends, should be of the best, while the site should be in a district where houses are of the same general type and cost. In this way, the home builder gets the fullest value of his money.

While a \$10,000 house is not within the reach of everyone building a home, the architect contends that the percentages hold good for any modern city house. By going over the items with the contractor, the owner may learn where slight savings may be made through judicious buying on the part of the contractor and judicious elimination on the part of the owner.

TO PROTECT SHINGLES.

Shingles should be painted or stained before they are put on the roof, as it is just as important that the under side, and

especially the overlapping sections should be protected as that the exposed portions should be thus safeguarded, says the "American Roofer." There are now on the market several types of paint which give quite an efficient protection against fire.

Either painting or staining can be done by "dipping." If a stained shingle is required, there are numerous stains obtained for the purpose, all of which are efficient. They usually contain a coal-tar product of which creosote is a constituent and effectively prevent decay.

Any color, from the lightest silvery gray, scarcely coloring the wood, to the darkest shades of red or green, is obtainable. A cold color, like gray or an undecided green, goes well with pure white, and the roof of a house painted with the mellow tint, known as "Colonial White," may be a dull shade of yellow.

The stain should be poured into a tall, narrow vessel capable of taking in an entire shingle. The shingles are dipped by grasping the thin end with a pair of pliers or pincers, immersing them, holding them down with a stick for a few seconds, the pliers being removed; then lifting them from the bath with the pliers and standing them upright in some convenient vessel to drain.

Painting by dipping is done in the same way, but is a little more difficult, as it is necessary to stir the paint once in about ten minutes to prevent settling of the pigment (the solid portion of the paint).

For this use the paint may conveniently be more fluid than for brush painting. It is, therefore, recommended that to every gallon of prepared paint there be added one-half gallon of pure raw linseed oil. The rest of the procedure will depend upon the nature of the shingles. If they be of cypress or yellow pine, benzole should be added.

The shingles may be laid at any time after the stain or paint is dry, but it is good practice at the time of laying to give a coat of paint, as it comes from the can, to the overlapping undersurface of the shingle at the time of laying. This acts as a cement and is a most efficient preventive of leak and rot.

After the roof is completed it should receive a final coat of paint. Use the paint as it comes from the can, applying with a full brush and spreading out smoothly, but not too thin.

PRACTICE SALESMANSHIP AND PROSPER.

Time was when the cold season was the dull season with the sheet metal and fur-

nace man. There was little of inside worn and less outside. The shop was kept open for such repair work as might drift along, but on the whole, the winter days were not rush days. Under such conditions the sheet metal man did not get ahead very rapidly. The man in a rut goes on in the same old way and makes a living year after year if he is fortunate in the brisk season. He is the man who complains about hard times in the sheet metal trade. In strong contrast to him is the man who gets out and hustles—the man who does not wait for business to come to him, but who goes out and digs up business. This is the modern progressive sheet metal contractor. He prospers because he practices salesmanship. He is not content to wait in his shop until some owner comes to him and asks him to give an estimate. He is out looking for work, canvassing for it, and always has his eyes open for something extra. When he is asked to estimate on a roof for a building he makes sure to find out if the owner wishes leaders, a ventilator or some other work done which he can perform. In other words, he lets no opportunity slip. He is the man who always has something to tide over a dull season. He takes up what the old-timer is likely to characterize as specialties. But there is nothing of the specialty about them to the man who has found out the profit he can make off them. The former is the type of man responsible for carpenters erecting metal ceilings, metal trim, metal shingle and the like. The latter is the man who is fighting to get these lines wholly back into the sheet metal trade. And he is the man who is becoming prosperous. He has found the remedy for lack of prosperity in the sheet metal trade—and that remedy is one available to all—salesmanship. The man who recognizes his opportunities and then puts forth his best efforts to take advantage of those opportunities is practicing salesmanship. There are plenty of opportunities, and the winter is an excellent time to practice them, especially on such lines as metal ceilings, humidifiers, heat regulators and similar products. These are good examples to prove that the sheet metal and furnacemen who practices salesmanship prospers.

—"Sheet Metal."

BE PROGRESSIVE.

The best is the cheapest on both ends and in the center. Improvement does not impose a tax, as efficiency pays for itself. The penny scripper cannot possibly hold out against as much as the gloomy, ugly, and unobliging progress. The best equipped shop never asks establishment. Be progressive.

The Standard Documents of the American Institute of Architects

The New Contract Documents of the American Institute of Architects are now on sale and replace the old Uniform Contract, which is to be discontinued

PRICES FOR SINGLE COPIES

Agreement and General Conditions in cover	\$.10
Bond of Suretyship	.02
Form of Subcontract	.02
Letter of Acceptance of Subcontractor's Proposal	.01
Complete set in cover	.15

Trial set delivered upon receipt of nine 2-cent stamps.

These Documents have received the full approval of the Institute, through its Convention, Board of Directors and Officers. They are the outcome of nine years of continuous work by a Standing Committee on Contracts and Specifications. This Committee, comprising some of the ablest American architects, was assisted by the Institute's forty Chapters, advised by eminent legal specialists in contract law and aided by representatives of the Building Trade Associations of the United States. The forms have been officially approved by the National Association of Builders' Exchanges, the National Association of Master Plumbers, and the National Association of Steam and Hot Water Fitters.

As The Editor Sees It

THE *Journal of the American Institute of Architects* devotes a chapter or so in its November number to the housing situation in which the official aspect of the problem is so admirably stated that we feel we cannot do better than pass it on to our readers.

"The industrial Housing Emergency, in its relation to the war, seems to be involved in a maze of obscurity," remarks the *Journal*. "The original committee of the Council of National Defense, charged with the task of investigating the situation, made its report to that body more than two months ago. Its findings must have been either incomplete or unsatisfactory, for the Council immediately began holding hearings which apparently had no other object than the verification of the evidence presented by the committee. This process did not produce any tangible result, and we may suppose that it still left the whole question where it was at the beginning, since a third committee, of which Mr. Otto Eidlitz, of New York City, was made chairman, was charged to cover the same ground. This committee reported directly to the President and his cabinet, we believe, and while the substance of the report has not been made available, press reports indicate that it carried definite recommendations and made plain the fact that a shortage of houses was seriously interfering in the production of many vital necessities of war. Subsequent to that report, there have been rumors to the effect that financial aid would be ex-

tended to one or two housing undertakings which had been begun, or which were ready to begin, but which had been stopped by shortage of money. Other rumors were to the effect that the whole matter, with the possible exception of such action as we have mentioned, would be left to be dealt with by Congress at its next session.

* * *

THE Shipping Board, which has separate authority for dealing with the house-shortage, has, according to a press report, enlisted the services of Mr. Flannery, President of the American Vanadium Company, whose task will be to see that housing accommodations are provided, as fast as possible, for workmen in the shipbuilding centers. On the other hand, it is also rumored that the Shipping Board's Committee on Housing will be merged with a general Commission on Administration, which will deal with all housing undertakings in which the Government has an interest. What the policies of this Commission will be is still left largely to conjecture, although current opinion inclines to the belief that it will devote most of its effort to financing private undertakings with government funds, and will commit the Government to actual participation in land-purchase and house-construction only when no other solution can be found."

SOME OF THE difficulties, legal and financial, involved in this question of industrial housing are pointed out in an article on the subject in the *Journal* from the pen of Mr. Frank B. Williams. Of the indisposition observable in governmental quarters to take up the subject along European lines Mr. Williams writes:

"Prior to the beginning of the war in Europe, in spite of the fact that the need of the cheap house in this country was acute, and the prospect that private initiative would supply this need adequately was at best remote, there seemed to be little probability that our government would give financial aid. The reason for our failure to adopt the remedy regarded as necessary by practically all the rest of the world was twofold: In spite of much expert opinion here in its favor, we did not as a people regard housing as an activity in which our government should engage; and we did not believe that, however desirable it might be, we could in this country legally adopt such a policy.

"The effect of the war upon the housing situation in the United States has been very marked. Soon after the struggle began in Europe, the cost of materials and labor, and the rate of interest and profits, rose sharply. The effect of these increases varied greatly in the different parts of the economic field. The production of goods for immediate consumption, although decreased, continued to be sufficient to meet most of the immediate

and pressing needs; since the consumer paid for these goods at once, their price could at once be increased to meet the higher cost of production; and the fear of lower prices of material and labor after the war did not lessen the output. In the field of housing, however, the situation was radically different. A house is constructed to last many years, during the whole of which period, if an adequate return on the investment is to be obtained, adequate payments for its use must be coming in. In housing, therefore, lower construction costs after the war, and the competition of cheaper houses which it would ensure, would make houses built at present prices a losing venture. The result of this possibility was therefore an almost entire suspension of construction of the more moderate-priced houses."

* * *

IT is in this crisis that earnest students of social conditions in this country and the general public are asking themselves more seriously than ever before whether or not this country should, perhaps, as a part of its normal activities in times of peace, perhaps only as a war measure, adopt the policy of government aid, State or national, in the housing of its working classes of more limited means, and, if so, whether it is possible under our law to do so. It is the legality of such a policy, and the best methods in the light of foreign experience of carrying it out, with which this article is concerned.

"Financial aid, given by the government to housing or any other activity, involves the use of public money. This money in this country must be obtained by taxation. The consideration of the legality of government aid to housing in the United States is therefore the consideration of the legality of the use of public money and of the power of taxation for that purpose."

"The State of Massachusetts, since the war in Europe began, has thought it necessary to pass an amendment to its constitution in order, tentatively, and on a small scale, to undertake State housing, and Pennsylvania has appointed a commission to consider the advisability of doing likewise. These states are undoubtedly wise in amending their constitutions before attempting ever so slightly and tentatively, to extend aid to housing; and it is probable that other States, wishing to adopt such a policy, will follow the same course."

* * *

IN peace times the various European governments have lent money to limited dividend corporations at from 2½ to 3½ per cent. In England, I am told, the rates have now risen to 5½ and even 6 per cent. The amounts advanced in peace times in the different countries

have been all the way from 50 per cent. of the value to 90 per cent. of the cost of the house and land. In England the proportion advanced by the government was in peace times usually about two-thirds of the cost or value, and, I am told, as a war measure, the amounts have been increased to 90 and even 100 per cent. of the cost. It is probable that we in this country at this time, if we adopt any such methods of aiding housing, will be compelled, under the industrial and financial conditions now prevailing, not only to advance the entire cost, but to agree to allow the companies to write off a portion of it, as has been done in various ways as a war measure in England, for, otherwise, after the war, when construction has become less expensive, the companies would be compelled to repay more than the worth of the houses. Such an arrangement would still be advantageous to the government, for the values of the houses, if publicly owned, would decrease just the same; the plan suggested would secure to the government the gains incidental to private initiative, and if the companies were bonded or the shareholders were made individually liable to the amount of their subscriptions, the government would be sure of repayment of the amounts due it.

* * *

ANOTHER danger which the policy of public loans, rather than public construction, tends to obviate, is the lessening of private construction which public competition usually causes. The government is not obliged to rent or sell its houses at the market rate, and often in its attempt to relieve the situation as much as possible, or on account of political pressure, accepts less than the market return, covering up the loss, perhaps, by juggling with the figures. The fear of this unfair competition discourages and greatly lessens private building, and, thus, often government assistance, unwisely given, decreases the available housing supply rather than increases it; for the number of houses publicly built will always be very few in comparison with those due to private enterprises. Where, however, the government lends to private parties for construction, this danger is, to a considerable extent, avoided."

* * *

IF you have followed these extracts from Mr. William's very interesting and informative article you will have perceived that governmental aid, under our American laws, is not the easy and facile thing that some of us, perhaps, have been prone to picture it.

Undoubtedly a way will be found to overcome such difficulties as exist. We must concentrate labor, and the labor thus concentrated must be housed. To the solution of the problem here present-

ed many pre-existing ideas must, necessarily, be subordinated. The legal obstacles are not inseparable. The economic dangers can be overcome by careful administration. Housing we must have to win the war, and that we are going to win it no American with good, red blood in his veins harbors the faintest iota of doubt.

* * *

THERE is not the slightest reason to doubt that, quite apart from the demand which is asserting itself for the rudely-constructed and largely temporary type of workmen's "home," designed to meet the needs of a floating labor army attracted to the big industrial centers by quasi-military activities, the operative builder is overlooking an opportunity in failing to meet a co-existent demand for homes of the better type. Never in the history of the big cities has there been so clamorous a demand for the moderate-priced type of dwelling. This is true not only of renting, but of sale.

An investment concern that will build for rental at this time will experience no difficulty whatever about filling its houses with an excellent class of tenants at rentals high enough to yield a splendid return on the investment. The selling demand is simply remarkable. Properties that have lagged unsold for years by reason of minor defects in planning, have sold within the past few months at an advance in price averaging anywhere from fifteen to twenty-five per cent. over original asking figures. There is cause for gratification in the fact that here and there operators are beginning to awake to the situation and break ground on new projects. Several of the larger operators contemplate a renewal of activity in the spring despite the prevailing difficulties, labor and material. A bad scare was thrown into the trade last week in the story that the government proposed to commandeer for shipyard use all of the gravel and sand available. It now looks as if this yarn was to some extent exaggerated. New York advices are to the effect that no move has yet been made to take over sand and gravel in the New York territory and advices from Baltimore are to the same purport.

A hen is the only kind of a critter that can produce something by sitting down and doing nothing.—Exchange.

There never was, never will be, a better medium for the man who has something to sell to a given class of buyers than the trade paper whose circulation is limited to that class. Newspapers with their swollen circulations strike at best but a chance target here and there. The trade paper carries your rifle fire to targets exclusively. You can't miss,—if your ammunition's right.

EDITORIAL NOTES

According to the "Gazette-Review," of Atlantic City, N. J., a committee representing the New York Shipbuilding Corporation, of Camden, N. J., is considering the housing in that city of a considerable number of their employees. Many of the smaller hotels, which usually shut down over the winter are making arrangements to reopen in order to accommodate this unexpected demand. Representatives of the shipbuilding company say that a schedule of train service will be arranged with the Pennsylvania Railroad.

It is reported that the Hog Island Shipyard people are contemplating the erection of a colony of workmen's homes in the meadows in the southwestern section of the city. The question of finding housing accommodations for the vast influx of new employees that are to be brought to Philadelphia by war industries is said to be the most serious problem thus far brought about by the war.

A "booster" meeting was held recently by the Harrisburg, Pa., real estate board, at which the uppermost topic was the serious shortage of houses in that city. It was stated that many families are compelled to double up, two families to a small house. The board is considering measures for relief.

The Merchants' and Manufacturers' Association of Columbia, Pa., is seeking subscriptions to a fund for building dwellings, a serious shortage in housing having appeared, due to the rapidly growing population and the expanding industrial activities.

The zoning law of New York City is apparently to be subjected to another judicious test. Baron Astor has filed plans for a seven-story business building in the Murray Hill district. It front on the west side of Madison avenue, between Thirty-fifth and Thirty-sixth streets, one of the choice residential districts.

At a talk on home building, presented recently at a meeting of the South Bend, Ind., real estate board, L. C. Whitecomb said that people to-day have outgrown the old-time habit of buying cheap houses, built especially for the market and instead want well constructed houses for which they are willing to pay a fair price.

This nation's trade with the countries of South America is at least three times as extensive as it was in the year immediately preceding the outbreak of the great world war. In the eight months ended with August (the latest month for which figures are available) exports to the sister republics of the south aggregated \$188,000,000, compared with only \$65,000,000 in the corresponding period in 1914. Imports from South America totalled \$433,000,000, compared with \$157,000,000 in 1914.

The fire loss in the United States and Canada in October amounted to twenty-six and one-third million dollars. The total for ten months is \$221,002,315, as compared with \$189,481,220 for the first ten months of 1916 and \$140,754,250 for the corresponding period in 1915.

Nearly 600 houses are in course of construction at Bethlehem, Pa. This is about one-tenth of the number that is needed.

In an effort to provide living quarters for the workmen in the shipyards along the Delaware River, a syndicate is buying up old vessels, and chartering those which are usually tied up during the winter months. The syndicate also purposes to purchase a number of discarded Pullman cars and place them as near the shipyards as can be arranged, where they will be heated and made as comfortable as possible for the men during the winter.

In spite of the high cost of building material and the scarcity of labor, it is a statistical fact that building operations in Atlanta to-day are more numerous than at any time in its history. This building activity is not confined to any one line, but includes residences, business structures, office buildings, warehouses and factories.

The official city building report for October in Pittsburgh, Pa., disclosed 170 new buildings permitted during the month, to cost in the aggregate \$1,567,124, as against 292 permitted in September, costing \$731,636, and 253 in October, 1916, to cost \$708,771.

The estimate cost of building operations in New York State, based on permits issued in the ten largest cities of the State, was thirty-one per cent. greater in September than in the previous month, and three per cent. less than in September of last year. As compared with August, six cities—New York, Rochester, Schenectady, Troy, Utica and Yonkers, reported gains. As compared with September, 1916, four cities—Rochester, Schenectady, Troy and Utica, reported gains.

A Bureau of Municipal Research has been established by the rapidly-growing city of Akron, Ohio. It is to be in charge of Don C. Sowers, formerly assistant at the Dayton Bureau of Municipal Research, and prior to that Professor of Municipalities and Public Accounting in the University of Oregon.

From the White Pine Bureau we learn that at the present time there is a very brisk market for white pine lumber. In spite of car shortage and labor troubles which have manifested themselves at some of the Idaho white pine mills production is keeping up or slightly ahead of demand. While prices have advanced considerably during the past year, due en-

tirely to demand, lumber prices in general have not kept pace with the advances in other commodities.

From J. H. Eddy, manager, Kaul Lumber Company, the following information of interest to prospective builders has been received: "As to market conditions touching Southern yellow pine, we can only say that the situation is statistically strong. There is an ample supply available of all sizes and grades used in general construction, including housebuilding, and, subject to car supply and transportation conditions, there should be no serious difficulty in prospective builders securing any reasonable quantity of standard items.

The Fifth National Foreign Trade Convention, under the auspices of the National Foreign Trade Council, will be held in Cincinnati, February 7, 8 and 9, 1918. The official call is soon to be issued by James A. Farrell, chairman of the National Foreign Trade Council.

G. A. Peterson has been appointed Philadelphia manager of the A. B. See Electric Elevator Company. Mr. Peterson was formerly located in Baltimore.

C. C. McDermott, of the Lord & Burnham Co., will shortly make an extended trip through the South for the purpose of studying conditions.

D. Knickerbacker Boyd announces that he has admitted to partnership Victor Darwin Abel and will continue the practice of architecture under the firm name of D. Knickerbacker Boyd & Victor D. Abel, architects, at the present offices in the Otis Building, Philadelphia.

Now in its eleventh year, the Girard Life Insurance Company has become big and sturdy enough to build a home for itself which it now occupies at 529 Chestnut street, opposite Independence Hall. The building is thoroughly substantial in construction and modern in design and appointments, giving the business the needed room for growth and expansion which has been steady and consistent since its first year. Nathan T. Folwell, president of Folwell Brothers & Co., is president; Joseph M. Steele, president of William Steele & Sons, is vice-president; Richard H. Wallace is vice-president and treasurer, and Albert Short, secretary and actuary. The company now maintains and operates agency forces in Pennsylvania, New Jersey, Ohio, Illinois, Missouri and Iowa. Its annual income and insurance in force have trebled during the past decade; its resources in 1916 were over 43 per cent. greater than in 1907. All its insurance, it is said, has been written by its own representatives, none having been taken over from other companies. Many prominent men in this city and State are on the board of directors and the company looks forward to the new year with good prospects for continued growth and gain.

Burt L. Fenner, of New York City, has been placed in nomination for the office of president of the American Institute of Architects. The signers to the nominating petition included: John M. Donaldson, William B. Stratton, D. J. von Schneider, Charles Kotting, F. J. Winter, Arthur H. Scott, William Reed-Hill, John Scott, James B. Nettleton, and Hugh B. Clement, of the Michigan Chapter; Edward A. Crane, John Hall Rankin, John P. B. Sinkler, E. P. Bissell, and George I. Lovatt, of the Philadelphia Chapter.

* * *

Adolph Hinrichs, formerly designer in the office of engineer of structures, New York Central Railroad, is now structural engineer in the office of Albert Kahn, architect, Detroit.

* * *

N. J. Henry Manufacturing Company, makers of window, door and porch screens, metal weather strips and glass inclosures, have established its plant at 983 Flatbush avenue, Brooklyn, and executive offices at 1 Broadway, New York City.

* * *

American Institute of Architects has mobilized the architects throughout the country for war service. Some are now in France, supervising the construction on the aviation fields to be used by the flying forces of the United States; others are in training in this country, notably in the camouflage battalion at the American University Camp, Washington, D. C. Three thousand architects are already at the disposal of the Government.

* * *

Robert L. Pryor, architect, has discontinued his office at 207 Market street, Newark, N. J., and will continue the practice of his profession at his residence, Irving place, South Orange, N. J.

* * *

Harold D. Hynds, of the Turner Construction Company, New York City, has resigned as secretary of the American Concrete Institute, on account of his acceptance of a commission in the Signal Corps, U. S. A. His successor as secretary is H. B. Alvord, of the Aberthaw Construction Company, Boston. Mr. Alvord was graduated from Massachusetts Institute of Technology in 1907, and after some years as instructor at that school and as assistant professor at Bowdoin College, entered the Aberthaw Company. The address of the American Concrete Institute is now 27 School street, Boston, Mass.

* * *

The American Concrete Steel Company, 27 Clinton street, Newark, N. J., has obtained the general contract for the construction of a large munition plant at Bloomfield, N. J. This operation, which will cost in the neighborhood of a half million dollars, will be located at Boomfield avenue and Grove street. The construction is of reinforced concrete and steel, one story, with ground dimensions of 240x600 feet. The building was planned by Francisco & Jacobus, 511 Fifth avenue, Manhattan, and will be occupied by the Interna-

tional Arms and Fuse Company, J. R. Fifer, engineer in charge.

* * *

The past week was again a noteworthy one for the volume of additional Governmental construction announced to the trade. It had been previously stated that the war program had been well advanced, but as the conditions in Europe mature it has become apparent that the United States will become a greater factor in the struggle than was at first anticipated and that fact necessitates a much greater volume of preparation in all branches of army and navy activities and also in those lines that will provide the munitions and supplies. The new work of the last week includes additional barracks, storehouses, aviation fields and training quarters, hospitals, and a number of industrial plants that will be used exclusively for the manufacture of ammunition and supplies.

* * *

During the week there was a report current that the Federal Government had commandeered the entire output of sand and gravel of the nation for war purposes. The newspapers devoted considerable space to the report, but up to the present writing there has been no formal or definite announcement and sand and gravel interests claim that they have not been officially informed of this action. If the

rumor resolves itself into a concrete fact it will undoubtedly prove itself a body blow to a much harassed industry. On account of the difficulties encountered in obtaining structural steel there has recently been a marked trend toward reinforced concrete construction wherever possible. As sand and gravel are important and necessary ingredients in all concrete the result of such an order will be apparent to everyone. Prominent sand and gravel concerns, with headquarters in New York, have not received notice that their output is to be commandeered by the Government and they do not think it likely that it will be. The majority of these firms are already delivering to Federal agents large quantities of both sand and gravel for military purposes and no further pressure is anticipated at this time.

* * *

Chicago Cement Machinery and Building Material Show will be held in the Coliseum, Chicago, February 6-13. The show will be held under the auspices of the National Exhibition Company, 123 Madison street, Chicago.

* * *

Pennsylvania and Atlantic Seaboard Hardware Association and the New York State Retail Hardware Association will hold a joint annual convention and exhibition in New York City, February 12, 13, 14, 15, 1918. Headquarters at the Hotel Astor.

UNITED STATES TAKES OVER GRAVEL AND SAND OF THE NATION FOR GOVERNMENTAL NEEDS

Affects Every Branch of Building Work and Hampers City Work

What Commandeering Sand and Gravel Output Means to Non-Governmental work.

"It will affect everything in the way of Philadelphia municipal improvements with perhaps the exception of the Torresdale filtration plant."—Director Datesman.

"I know it's going to stop work on the building of League Island Park."—Senator Vare.

"I don't see how things are going to turn out if no sand or gravel is available for private use."—Jerome H. Louchheim, president of Keystone State Construction Company, which holds millions of dollars' worth of subway contracts.

"If there's no sand there will be no concrete, and hence no buildings."—Edwin M. Evans, of Evans Construction Company.

The entire sand and gravel output of the country, it is understood in building circles, has been commandeered by the United States Government. Formal possession will be taken by Federal officials.

It is known positively that three big companies in this district are affected.

George D. Van Seiver, president of the De Frain Sand Company, of this city, said that his own company, as well as the National Lighterage and Dredging Company, of this city, and the Pennsylvania Sand and Gravel Company, of Tullytown, Pa., will be operated by the Government.

Jerome H. Louchheim, president of the Keystone State Construction Company, which holds millions of dollars' worth of contracts for subway construction in connection with this city's high-speed transit system, said that he understood every sand and gravel concern in the country will be taken over by the Government.

Mr. Van Seiver said that the sand and gravel output of the De Frain Company's deposits was to be used at Hog Island by the American International Shipbuilding Corporation and at Bristol by the American Shipbuilding Company.

Herbert Allen, formerly with the General Crushed Stone Company, is the man Mr. Van Seiver intimated will be the supervising engineer in charge of the transfer of the plant.

Mr. Allen enlisted, it is thought, in the engineering corps and will be the Government representative.

Equipment Diverted.

The estimated quantity of sand and gravel diverted for this use from the productive resources of the De Frain Sand Company was estimated roughly by Mr. Van Sciver at 750,000 tons. He added:

"We have many large contracts for sand and gravel, and these will have to wait until some arrangement can be made. We may be able to divert some sand and gravel after the Government gets what it needs, though it will need all it can get for a few months. We have large contracts with the Philadelphia Electric Company for its new power house at Palmer street, near the Delaware River; we also had large contracts for sand and gravel for the Westinghouse plant at Chester; the Keystone Construction Company for sections of the subway work and with Baldwin's at Eddystone."

Mr. Van Sciver thought that the turnover of all this sand and gravel probably would delay work on subway construction and other municipal improvements until early spring.

"I believe," he said, "all work on municipal improvements will be delayed for at least two or three months," Mr. Van Sciver said, as the Government merely gave notice that the entire equipment had been commandeered.

In estimating the amount of sand and gravel diverted from large contracts involving the construction of industrial and municipal projects, Mr. Van Sciver said that material valued at approximately \$1,000,000 would be held up.

Hope for Release in Spring.

The manner in which this transfer will be effected, Mr. Van Sciver asserted, would be through an expediting organization formed by representatives of the War Department, who will direct the shipment and apportioning of material. He continued:

"It may be possible later to divert some supplies of sand and gravel to the Philadelphia subway work, though that depends on how much the Government needs and how soon it can be obtained. We are anxious that it be over as soon as possible. We have a new dredge being built, and if the weather is favorable the Government should complete its concrete work by April to a point where we can either withdraw or be allotted a portion of the supply for other work. But we are glad to give all the assistance possible and to co-operate in every way with the Government. The ships have to be built and the shipyards must be considered first."

Stops League Island Park.

When asked what the effect would be on the work of constructing the Broad street subway, Senator Vare said:

"I don't know about the subway construction, but I do know it's going to stop work on the building of League Island Park. I was told to-day that I could not get any more

cobblestones for this work. There will be a big delay in building the park. It's too bad, but it can't be helped."

Director Twining said:

"The taking over by the Government of the sand company will not affect greatly the construction of the Broad street subway, as far as I know. I understand the Keystone State Construction Company has enough stock on hand to carry on the work for some time, at least until the work at Hog Island is completed."

Mr. Louchheim said:

"There will be enough material to last us for some time, perhaps until the winter is over. After then, who knows? The Government has commandeered all the sand and gravel concerns in the country, I understand. This commandeering is not confined to the De Frain Sand Company."

"Why, the Government could not take care of all the output of the sand if it would. It could not unload it from the cars. It is hardly fair to the advancement of big municipal improvements like the subway to be deprived of the wherewithal to complete them."

"The De Frain Sand Company, I am informed, offered to give the Government as much sand as it wanted for the completion of the Hog Island shipyard. But the Government took over not only all of the De Frain Company's output, but the output of all the gravel concerns. If the Government had only taken over one company's output or part of the output from each company, it would not have been so bad. I don't see how things are going to turn out if no sand and gravel are available for private use."

"We get most of our sand from the Newton Supply Company."

Torresdale Plant Immune.

Director Datesman said:

"If it is true that the Government has commandeered the sand and gravel output, it will affect everything in the way of municipal improvements with, perhaps, the exception of the Torresdale filtration plant. The sand used in the filtering of city water can be used and reused again, so that would not be hurt materially."

"The street railway system, all highway improvements, sewer construction and sewage disposal will be hampered. Unless we can find a substitute for sand and gravel, the streets will not be repaired. In short, any public work in which sand is used will be greatly affected."

"The city has on hand very little sand and gravel. You see, we have all supplies delivered when needed and wherever needed. The city has no place to store sand and gravel."

PLENTY OF BUILDING MATERIAL.

An English nobleman was about to set out for India, and fearing that in his absence vandals might destroy a picturesque ruin on his estate, he said to his steward: "I want you to build a wall here"—and drew a tiny furrow with his stick around the ruin—"a stone wall five feet high."

On his return home the nobleman started for the spot. When he reached it he rubbed his eyes in amazement. There was the new stone wall, but he could see nothing towering up inside of it. He turned excitedly to his steward:

"Look here, where's the ruin, man?"

"The ruin, my lord?" replied the steward. "Oh, that old thing? Sure, I used it to build the wall with."—Chicago News."

KEEP THE POT A-BOILING.

Keep the pot boiling. Because we are at war seems not to be a good reason why we should all abandon our every-day pursuits and wait for a shower of manna. Keep the country prosperous. Maintain the basic industries. Don't say, "Let's 'lay off' until the war is over." Don't hang around the bulletin boards, or bury your cash in the cellar. Hustle! Put your money where it will do some good.

How, in the name of Patriotism, can we punish the Kaiser by abandoning our business pursuits? Let's "cut out" the pork barrel expenditures. Let's economize. Let's have no more of wasteful extravagance, either during the war or after it. Smash the pork barrel with an axe. It doesn't matter whether it's the big National pork barrel, or just a little village cask from which the local magnates fish out rich and luscious bits of pork from time to time. Get rid of the pork barrels. Not as a war measure, but rather because this is an opportune time to clean house. And after we have the house cleaned, let's keep it so.

Don't forget that the production and handling of building material are basic industries of the country. The building business is now bearing a heavy load—because of high fuel prices, high labor costs, scarcity of cars, scarcity of production. Any tendency to add greatly to the burden that construction must bear, either by taxation or by unnecessary curtailment in manufacture or distribution, will strike at the base of this fundamental industry, and may do great harm.

The building of schools and other needed public buildings, the developing of our land by drainage projects, by irrigation, by road-building, by any of the projects that are based on a real public need, ought to proceed unhampered by the war. The same broad rule should apply to needed private construction work. Every factory for which there is actual need is a public benefit. Every needed dwelling house for which there is a legitimate demand should be built.

**One way to escape the income tax is to
quit advertising and do less business.**

Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Residence, Oak Lane, Philadelphia. Architect, Wesley L. Blithe, 608 Chestnut street, Philadelphia. Owner, C. E. Lloyd, Jr., Eighth street and Sixty-sixth avenue, Oak Lane. Stone, 3 stories, consists of stone work, shingle roof, electric lighting, hot water heating, tile work. Plans completed. Owners ready for sub-bids December 12th.

A DROP OF INK.

A drop of printer's ink
May make a thousand think.
A single drop
May keep your shop
From getting on the blink.

A drop, when hardly dry,
Makes many people buy.
It helps your biz',
And thereore is
A goodly thing to try. —Ex.

If you've got a specialty that will commend itself to builders, make a contract for space and start right in and talk about that specialty. Dwell on its good points, point out its advantages over similar devices, set forth its dominant qualities. And keep right on, week after week talking about it. If you don't book orders we'll bet you a big red pipkin that there is either something better on the market or your specialty isn't worth a kopeck noway.

Don't try to see out of some other man's eyes when you've got a pair of your own,—use them and go over every job carefully before you consider that you are through with it, and don't forget that one "good job" is a better advertisement than many poor ones. —Exchange.

Military Roads

*Resolution Adopted by Chamber of Commerce of the United
States in Convention at Atlantic City, September 21, 1917:*

WHEREAS, It is essential that all the transportation facilities of the nation should be brought to the highest state of efficiency in order that foodstuffs may be moved most economically from the farm to the market, that manufactured products be moved at the lowest cost from the factory to the consumer, and

WHEREAS, The Public Highways offer a good, prompt and economical means to supplement transportation by rail and water, therefore

BE IT RESOLVED, That the prompt improvement of our Public Highways is important and should be forwarded in every proper way.

Realizing the transportation congestion crisis, this was one of the most important resolutions passed by the Chamber of Commerce of the United States.

Motor trucks are ready at hand; the roads of the nation must be immediately developed and improved.

A Federal Highway Board is urgently needed.

This resolution deserves wide publicity—and to help we are publishing it throughout the country in place of our scheduled advertisements.

CONVENIENCES IN POPULAR DEMAND

Prospective tenants and buyers want to know how they are going to keep warm in the chilly mornings and evenings of the early Fall and late Spring, when it isn't practical to have the furnace going.

If you can point to a Baseboard Gas Outlet in each room to which Gas Heating Stoves can be readily connected your Prospect is then assured of a quick, clean and economical method of getting the desired auxiliary heat.

It's the Long Fire Travel in the Burnham Cosy Comfort Boiler That Makes the Short Coal Bill

If you can keep the hot gases and smoke travelling back and forth inside a boiler long enough to extract the bulk of their heat, and still not make the draft sluggish; it's plain enough that less heat will go up chimney and more heat go into your radiators.

That back and forth action is what we call fire travel. It's this long fire travel in the BURNHAM Cosy Comfort Boilers that has a lot to do with making their short coal bills.

Our Engineering Department is at your service in solving Heating Problems

The business man who grudges a commission to an advertising agent who thinks "he can do it himself" is usually about as intelligent as he would be if he grudged the commission of the architect and decided to build his store for himself.

We have pebbles all sizes. Cost less than what you are using. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

INVITATION FOR PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., November 30th, 1917.—Sealed proposals will be opened in this office at 3 p. m. January 28th, 1918, for the construction of the United States post office at Sunbury, Pennsylvania. Drawings and specifications may be obtained after December 17th, 1917, from the custodian of the site at Sunbury, Pa., or at this office, in the discretion of the Supervising Architect, Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., December 1, 1917.—Sealed proposals will be opened in this office at 3 p. m. January 14, 1918, for the construction of the United States post office at Owego, N. Y. Drawings and specifications may be obtained from the custodian of the site at Owego, N. Y., or at this office, in the discretion of the Supervising Architect, Jas. A. Wetmore, Acting Supervising Architect.

WAGES OF WOODWORKERS IN SWITZERLAND.

In March, 1917, the Woodworkers' Federation of Switzerland undertook a statistical inquiry into the current average wages of woodworkers in the various sections of the federation. The results of this inquiry were published in the official organ of the federation, and show an average wage in 24 principal towns of 13.6 cents per hour.

These wages are in the main those of carpenters and joiners. In a number of towns the inquiry included also special branches of woodworking, and it was found that the average wage of inlaid-floor makers was 19.3 cents in Basel and 22.3 cents in Berne and Zurich; that the average wage of lathers was 17 cents in Berne and 23.3 cents in Zurich, and of upholsterers 16.9 cents in Berne, 16.5 cents in St. Gallen, and 19.1 cents in Zurich. Basket makers and sawyers receive the lowest wages, averaging from 10.2 to 11.8 cents per hour. In the smaller towns the average wages of carpenters and joiners are lower than those shown.

Read "The Guide." Read it all through. Don't let a single item escape your notice. You'll be surprised what a lot of valuable information is crowded into its pages in the course of a year.

BUILDING TRAINING CAMPS IN THREE MONTHS A REMARKABLE FEAT

Patriotic Co-operation of 50,000 Engineers, Architects and Artisans Leads to Unheard-of Accomplishment in American Building

When the French philosopher La Rochefoucauld remarked that "the rust of business is sometimes polished off in a camp" he little suspected how brisk this polishing process would be three centuries later, when a country not then born should come to the aid of his native land.

He no more knew than do many Americans to-day what a task it is to build in three months training camps to care for a million men.

June 15 Congress appropriated \$79,350,525, with which to build thirty-two camps, sixteen of a temporary nature for the National Guard and sixteen more, permanent in character, for the National Army.

Camps Are Practically Completed.

To-day these camps are practically completed. Sixteen army cities have been built, each to accommodate nearly 40,000 men. In the whole United States there are hardly 150 cities larger than these soldier towns, which have sprung up since June.

The story of how it was done is one of patriotic co-operation on the part of some 50,000 engineers, architects, mechanics and builders, who responded to their country's call when an emergency committee of the Council of National Defence pointed out the need. Specialists in all branches of construction hurried to Washington to tender their services to the Government. Many of them came with heavy political backing, anxious to get their share of the \$80,000,000 to be spent. Because of the necessity of quick action, however, the usual procedure of competitive bids was abandoned on the advice of the Council of National Defence. Sixteen of the most reputable construction companies in the country were selected, each to build a camp in the section where most of its usual work was done.

Let on Basis of Fees.

Contracts were let on the basis of fees, assuring the highest grade of work and preventing extravagance and excessive profits. Where the cost of a cantonment exceeds \$3,500,000 a fee of 6 per cent. is given, from which the contractor must pay his own overhead charges, which usually eat up half the fee. A sliding scale was arranged, paying as high as 10 per cent. where the cost of the work is less than \$100,000. In no case can the total fee exceed \$250,000.

Government representatives have access at all times to the accounts of the construction companies. They set certain standards of workmanship which must be attained.

When the construction chiefs arrived early in the summer to begin their work they found,

in some cases, newly vacated farms on which they made use of such buildings as were available. In some instances it was necessary to provide temporary quarters for several thousand workmen. Otherwise transportation had to be arranged for them to near-by cities.

The site chosen for Camp Gordon is thirteen miles east of Atlanta. Since it was impracticable to care for the workmen at camp, the War Department arranged to have them brought from Atlanta in the morning and returned in the evening. The Southern Railway is paid 50 cents a man to haul 6,000 workmen to and from camp daily.

Camp Gordon may be taken as typical of the other fifteen National Army camps. Problems which arose there had to be solved at others also. The work there, as at other cantonments, is now nearly finished.

In charge of building Camp Gordon is Major J. N. Pease, for thirteen years engaged in mill construction until he accepted a commission in the quartermaster's corps. The contractors at work on the camp are responsible to him as representative of the Government.

The total cost of buildings at Camp Gordon, October 30, was \$4,000,000. In addition, plumbing, wiring and heating cost \$1,500,000. Roads, walks, walls, drainage and sewage disposal accounted for \$294,000. The base hospital building cost \$460,000. Ten thousand dollars was paid to build the remount station, bakery and storehouses. The construction of a rifle range required the expenditure of \$50,000 more. Camp Gordon, as it stands to-day, has cost about six and a half million dollars. This is exclusive of the 3,000 acres which the Government has leased for the camp site.

Some idea of the magnitude of a cantonment may be gained from the number of buildings now completed at Camp Gordon. There are 282 barracks, each built to accommodate 200 men, 334 lavatories, ninety-three officers' quarters, nineteen administration buildings, thirty-two stores, seventeen medical buildings, eight warehouses, nineteen guard houses, two quartermasters' offices, one telephone exchange, one post office, two fire stations, thirty-one hose reel houses, three mess halls distinct from company mess rooms, one bakery, five water tanks, five post exchanges, two laundries, twelve double-ward hospitals, two isolation wards, one chapel, one heating plant, eighty-seven stables, fifty wagon sheds, one blacksmith school, four magazines and other buildings, totalling 1,076.

In their construction were used 47,665,168 feet of lumber and 2,665 kegs of nails. More than 5,000 freight cars were necessary to carry the material to camp. Distribution of

Our specialty is Portland Cement that will stick and pass the City Department. **DAVID FRANCE CO.,**
Tasker Street Wharf, Delaware River, Philadelphia.

supplies around camp required 360 teams and wagons, sixteen Government trucks, fifteen rented trucks and forty-three motor cars.

As many as ten thousand persons have been engaged in building the cantonment, including superintendents, foremen, carpenters, laborers, time-keepers, water boys, brick ma-

sons, pipe layers, mechanics, concrete finishers, lumber checkers, blacksmiths and linemen.

All these, each doing the work he is best fitted for, have formed the advance guard of the army now in training to crush the Hohenzollerns.—Glendon Allvine, in "New York Tribune."

HOW 100 CONCRETE HOUSES WERE BUILT

The method of building 100 reinforced concrete houses by the Aberthaw Construction Company, of Boston, for the American Steel and Wire Company, at Donora, Pa., is of special interest. The Aberthaw Construction Company has turned its attention to this class of work, and the fruits of its study may be seen in the project now under consideration.

The site of the development is about 40 miles outside of Pittsburgh, and is located on a steep hill above the Monongahela River. The property has been laid out into 156 lots, of which 100 are now being built upon, and the remainder will follow next year. Grading was done and streets laid out by the American Steel and Wire Company concurrently with the house building. The streets will all be paved with concrete, and granolithic sidewalks will be laid.

There are eight different styles of houses being built, containing some four, some five and some six rooms. Of these, a few are being built in pairs with party walls, and the rest are all detached. In addition to the number of rooms given above, each house has a bathroom and full cellar.

The cellars were excavated with a steam shovel, the shovel taking out a strip down each street, and the space between the walls of the houses being backfilled afterwards.

The walls and floors are of reinforced concrete, the cellar walls being 9 inches thick and the walls of first and second stories being 6 inches thick. The buildings were finished at the top with a reinforced concrete cornice in which a gutter was formed, and on top of the concrete ceilings a roof was built up of spruce framing covered with asbestos slate.

The buildings are all equipped with gas furnaces and cooking ranges, wired for electric lights, and each is fitted with both water-closet and lavatory bowl with hot and cold water. The outside walls are covered with stucco.

The forms used are of steel. They consist of 9-inch channels set up vertically and connected together with clips and wedges passed through slotted holes in the flanges of the channels. At the corner of the building a 4x4 steel angle is set up and the forms lined up longitudinally by means of a steel channel used to form a belt course. This not only fastens the forms of the lower floor, but was bolted into the floor reinforcement and re-

mains in place for a support for the second story forms and was only stripped at the last when all the concrete is poured. The steel wall forms also supported the floor forms, arrangements being made by which steel channels were bolted to the inner side of the steel wall forms upon which the floor centering is laid. Steel domes are used for floor forms. Concrete was hoisted by means of a small derrick bolted to the forms themselves and connected with the hoisting engine which operates the mixer. The usual method is to set the forms for one story wall and floor together, and these are poured continuously.

The progress of the job was limited by the setting of the concrete. To form, pour and strip each story takes about seven days. Working at this rate, the house of two floors and cellar is completely concreted in three weeks, and with the twelve sets of forms on the job, twelve houses are concreted in this period. After this the plumbing, heating, plastering, roofing, and finish are done, which take about five weeks more, so that the houses are being completed at the rate of twelve in the first eight weeks and twelve every three weeks thereafter.

Concrete is hoisted in wheel barrows. Each has a hook bolted to the front end and is lifted by the derrick by means of three steel arms with rings on the ends, two of which hitch to the handles and the third into the hook on the barrow, so that it is lifted completely and level onto the floor. The problem of economical placing of the small amounts of concrete in each house took considerable study, and it is believed that the means adopted are about as successful as can be desired.

The steel forms are adaptable for porches and other irregularities in the building and the chimneys, but the cornice is formed up in wood, the only lumber used in the form work.

There was a 'squad boss in charge of the carpenters and helpers working on each house. This boss had four carpenters and four helpers on the smaller houses and as many as seven carpenters and seven helpers on the large double houses. It was found most economical to work the carpenters and helpers in pairs; that is, each carpenter had a helper to assist him in moving forms and on other general work.

The reinforcing steel boss was under the

carpenter foremen. This was found desirable, since the steel had to be erected rapidly whenever the carpenters were ready for it.

A regular planning department laid out progress each day for the next three days and chose the foremen to erect the forms on each house and the concrete gangs poured them.

Three concrete gangs were at work, two concreting walls and floors and the other doing advance work and followup work, such as footings, pavings, porch walls, floors, steps, window sills, chimneys, etc.

The plant on the job consisted of three one-bag gasoline driven mixers, two of which were equipped with side loaders; three circling swinging steel derricks; two gasoline driven hoists. The sand and slag, as well as cement, were delivered to the mixer by means of a truck which brought the material from Aberthaw's unloading yard, located in the yard of the American Steel and Wire Company.

The quantities of concrete per house varied from 145 yards for the largest double house down to 85 for the smaller single houses. This includes all walls and floors, footings, pavings, porches and chimneys. It cost about \$2.25 per yard to place the concrete in the first and second story walls, which are 6-inch walls, and the cost was the same for the floor slabs. The smaller houses have about 15 yards of concrete in the first or second story walls, and six yards of concrete in the first and second floors. The roof, including cornice, has about 10 cubic yards.

Twenty-eight complete houses (counting double houses as one) were completed in 12½ weeks, or at the rate of a house every three days. The number of men on the concrete gang varied from 13 to 15, according to the type of house and amount of concrete to be poured. At any one time there was at work five carpenter gangs erecting forms, two concrete gangs pouring, two stripping gangs stripping forms, one concrete gang on footings, pavings, porch floors, porch steps, etc., one digging gang and one finished carpentry gang doing the furring, roof framing, erecting door and window frames, sash doors, inside and outside trim, stair laying, floors, etc. Concreting basement walls takes about 2½ hours; pouring the floors requires about 1½ hours. Stripping an erecting the basement wall forms on the first story takes 1½ to 2 days. The stripping of the first story walls and erecting the second story and cornice is a slower operation and added from half a day to a day to this. Concreting the walls took about 2½ hours and the roof about the same length of time.

This is the age in which one man DOES ONE THING. You can run your BUSINESS. Find a man who can RUN YOUR ADVERTISING.

As The Editor Sees It

ON another page of this number of THE GUIDE appears an ordinance of Councils, approved by Mayor Smith under date of November 28, prescribing certain regulations for the use of terra cotta, hollow tile and wooden shingles in building construction within the boundaries of the City of Philadelphia.

This ordinance is one that, we feel, should be carefully looked into by local builders, first, because it establishes regulations with which the trade will find it necessary to become familiar, and second, because it legitimizes, within certain limits, the use of the wooden shingle against which a nation-wide campaign has been waged by fire-prevention experts.

In order that there may be no doubt among local builders, architects, and others at interest, as to the precise nature of the provisions embodied in the new ordinance we have deemed it wise to reproduce it in full. It will be recalled that some months ago an ordinance was slipped through councils sharply limiting the use of the city's highways for the storage of builders' material. THE GUIDE ferreted out this piece of legislation and acquainted the trade with the drastic character of its provisions with the result that the Master Builders' Exchange at once appointed a committee to wait upon Mayor Smith, which committee was able to bring about a considerable modification in its requirements. In connection with the present ordinance we

want to say that we shall be glad to find space for such discussion of the merits or demerits of the new regulations as our readers may care to contribute. The subject should be one of the widest trade interest and is here brought to trade attention in the hope that the fullest discussion will ensue touching every phase of the subject.

TO its many friends and well-wishers, to its subscribers, advertisers and readers, THE GUIDE begs to extend the season's greetings. We trust that, notwithstanding the widespread depression that has manifested itself in many branches of the building trades, there will be found a way whereby all may participate in a Merry Christmas and have cause to look upon the year which lies just ahead as a happy and prosperous New Year. While it would be absurd to attempt to gainsay the fact that the construction interests of the country have been among the chief sufferers of the changed and unusual conditions proceeding out of the war and our immersion therein one does not need to be a confirmed optimist to perceive that there are evidences here and there of a righting-to process that should, within the next few months, work conditions back to nearly normal, if not normal standards. It is coming to be somewhat generally recognized that the "drop all business for the duration of the war" theory is one that has its root in a rather woody order of economics. As we have

taken the trouble to point out in a number of references to the subject upon this page it is of the most vital importance that organization at the front be buttressed and supported by industrial organization here at the base of supplies. To keep the nation keyed up to the pitch of efficiency necessary to win the stupendous affair upon which we are now engaged there must be as little disturbance of normal economic standards as a prudent and energetic prosecution of our part in the actual conflict will permit. Reduced to clear, uninvolved statement this means "Business as Usual." Those crack-brained and excitable persons who were heard demanding, a few months back that all business stop, all industry cease and everybody turn soldier, have been relegated to the rear. With an increasing knowledge of the blunders through which England passed in the first year of her sudden propulsion into the new and unaccustomed responsibilities we are coming to a recognition of the importance of avoiding any widespread disorganization of our normal industries.

WHILE building may not by reason of labor and other difficulties, be as extensive as in time of peace there can be no reason for doubting that new construction will find a way to keep pace with current demands. The demand for housing, particularly, is one that must be met. Little by little the panicky feel-

**BLUE
PRINTS**

ing observable in the first few months of our participation in the war is giving away to a feeling that despite changed conditions there is still a reasonable opportunity to do business for the man who does not lack confidence. There still remains to be done a vast amount of new building incident to industrial expansion. Governmental construction is by no means at the end of its maximum of requirement. Housing problems will demand thousands of new structures in various sections of the country. Investors are gradually awakening to the great truth that construction done at the present price levels is not doomed to a ruinous depreciating slump following the war for the very convincing reason that price levels will not slump with the return of peace and will in all human probabilities never get back to ante-bellum standards.

The fact that America will be called upon to rebuild the desolated areas of Europe should make it plain even to the doubting Thomas, that neither labor nor materials will decrease notably in cost for years following the restoration of peace.

* * *

I AM in receipt from the Erickson Agency of New York City, of a strikingly effective advertising folder rehearsing the advantages of the Barrett Specification Roof with special reference to its adaptability to great, modern, industrial plants. The inspiration for the folder had its rise in the roofing, under the Barratt guarantee, of the largest dye plant in America, the plant of the National Aniline and Chemical Company, Inc., at Buffalo, N. Y.

Two hundred and one thousand three hundred square feet of the Barrett roofing were required to do the work, which was done by the Jameson roofing company under contract with the John W. Cowper company, engineers and contractors, and covered by a 20 year guaranty bond by the Barrett Company. The folder is 10 x 12 in size, of four pages, is most tastefully done in blue and white on a gray background and is a wonderfully fetching bit of shrewdly-planned advertising. One entire page is given over to the reproduction in fac-simile of a letter from the engineer and contractor complimenting the Barrett Company on the excellence of its material, workmanship and service; the entire inside field of the folder, 20 x 24, to a splendid wash-drawing of the big dye plant and a deftly-conceived statement of the meaning of the term "Barrett Specification." The Barrett Company is to be felicitated upon issuing, at a time when the building trades are in a condition bordering on blue funk, so tonic and stimulating a sample of live-wire publicity.

THE Philadelphia Chamber of Commerce conceived the happy idea, recently, of setting afoot an inquiry, the end of which was to ascertain definitely, just how many empty or unoccupied houses were to be found in Philadelphia. As a result of this inquiry we are able to state that Philadelphia is up against an absolute scarcity of housing accommodations, the number of unoccupied houses being the smallest ever recorded in the history of the local real estate field.

That, however, was not what we started to touch upon. Following the Chamber of Commerce inquiry, the *Atlantic City Gazette-Review* printed an editorial on the subject in which it made the statement that of the several thousand houses reported as available, under that inquiry, not more than a dozen could properly be regarded as tenantable from the viewpoint of modern living standards. They lacked sanitary equipment, lacked modern conveniences of living, were in bad repair, lacked paint, paper, good roofing, heating equipment, lighting and ventilation. If this statement is correct, and we have not the slightest doubt that it is, there are some very short-sighted realty owners at large in this much-boasted city of homes. There is something depressing in the thought that in an age of general enlightenment there can exist men who will deliberately permit property to go to wreck and ruin, depreciate in value and contribute to the depreciation of adjacent values, for want of the systematic outlay of a fixed annual sum on needed repairs. Probably three-fifths of the unoccupied real estate in Philadelphia could be made profitable and measurably enhanced in value by remodeling and judicious renovation. There ought to be a way legally to compel the man who owns real estate to keep it in a condition rendering it not merely habitable, but up to the standard of surrounding property.

* * *

AT the recent meeting of the Ohio Builders' Supply Association, Ralph P. Stoddard made the builders present sit up and take notice by directing attention to the status of building construction among American industries.

"People outside of the building business," said Mr. Stoddard, "have not awakened to the fact that building construction is about the biggest single industry in the United States. It is stated that one-eighth of all the people in the country are in some way connected with the building industry. In volume it is second to railroading. In 1916 there was reported from 24 cities \$660,000,000 in new construction. This does not include the other millions spent in smaller towns and rural communities where records are

not compiled. Neither does it include the road, bridge, sewer, sidewalk, underground and landscaping work that always go with public improvement."

Has it ever occurred to you to look at the building industry from this particular angle?

NEW BOOKS

"The Kiln Drying of Lumber," a practical and theoretical treatise, by Harry Donald Tiemann, M. E. M. F. J. B. Lippincott Company, publishers, Philadelphia.

The importance of kiln drying, as applied to lumber, is so well understood that this volume by a specialist, in charge of the section of timber physics and kiln drying experiments in the U. S. Forest Service and special lecturer on wood technology at the University of Wisconsin, should meet with a wide demand not only from the lumber trade, but throughout the construction field. Kiln drying not only renders the wood treated more serviceable and adaptable for the purpose for which it is to be used, but it reduces the losses incident to warping, checking, case-hardening and honeycombing that issue from air drying. It reduces also the interest charges, the fire risk, the deterioration from exposure to weather, and makes the wood treated lighter in weight, facilitates handling and shipping. Mr. Tiemann is an admitted authority in his line and has dealt with his subject with a clarity, a thoroughness and a fullness of detail that will commend it to readers seeking expert, first-hand knowledge of the technical and practical side of the seasoning process. The volume is judiciously illustrated, admirably arranged, consists of 280 pages octavo and retails at \$4.00 net.

The man who doesn't advertise because he can't afford to "do it right" will never reach a position of affluence because everything worth while in the world had to have a beginning, and there can be no "get there" for the fellow who fails to make a start.

Fifty years ago the grocer set out a keg of mackerel and a box of kindling wood, and sat down to wait for customers. Today he carries street-car and newspaper advertising and dresses his windows as smartly as the department store. If it didn't pay he'd still be sitting behind the stove waiting for customers with a mackerel keg out front doing service for a sign.

Business is founded on reciprocity and co-operation. Any other plan than this spells bankruptcy. The successful business nowadays has a heart and a soul.

Parties who want milk should not seat themselves on a stool in the middle of the field, in hope that the cow will back up to them. This would be as vain as for a man to step out of his office on Broadway and shoot in the air in the hope of firing into a flock of ducks that might be flying over.

EDITORIAL NOTES

The Chamber of Commerce has set out to consolidate industrial suburbs to the city of Philadelphia. The consolidation will be one of the five aims of the Chamber for 1918. "At the present time," said Alba B. Johnson, president of the Board of Directors, which outlined the year's program, "the need is greater for an enlargement of the city than it was in 1854, when the consolidation went into effect. Conditions have changed greatly, and the port of Philadelphia now extends from the Delaware State line virtually to the north line of the city; indeed, it might even be said to extend up the Delaware River to Bristol. The measure has the approval of the Mayor, the Director of Public Works and the city's bureau of service. To accomplish it will mean the elevation of Philadelphia to its proper position as the second city of the country. The Executive Committee has carefully considered this project and has taken into account the fact that it cannot be done without an extensive educational campaign. It may cost \$10,000 a year to the Chamber of Commerce until it is accomplished.

Frank Trumbull, chairman of the Railway Executives' Advisory Committee, says the railroad problem will be solved by three things:

1. Broad-visioned national regulation under the control of the Federal Government.
2. Co-operation between the carriers, the employees, the public and the Government in getting a maximum of service—that is, the most economic production of transportation.
3. Adequate rates for service.

* * *

As a site for a large addition, the Ninth National Bank has purchased the property adjoining, at the southwest corner of Front and Norris streets, from Dr. Ralph E. Gettelman, who acquired the property recently from Richard Kelly for \$17,500. The property occupies a lot 24x110, and is assessed at \$20,000. It is a four-story property, and for years was occupied as a store by George Kelly.

* * *

Sheriffs' sales have dropped to 1796 this year, as compared with 2155 in 1916 and 2345 in 1915, according to figures compiled by Henry S. Bissex, real estate clerk of the Sheriff's office. Sheriff's sales are regarded as business barometers, and the falling off in sales is attributed to a demand for properties so that fewer owners have difficulty in meeting the fixed charges.

* * *

Oscar P. Laubscher, formerly with George B. Post & Sons, New York, and D. H. Burnham & Co., Chicago, is now with the Federal Bridge and Structural

Co., Waukesha, Wis., and engaged at Savannah, Ga.

* * *

As a site for an addition, John T. Lewis Brothers' Company has bought from Henry A. Hitner Sons Company a large plat, containing several factory buildings, at the southeast corner of Moyer and Huntingdon streets, subject to an annual ground rent of \$2160. The property, which adjoins that of the grantee, is assessed at \$40,000, and occupies a lot having a frontage of 551 feet on Moyer street by an irregular depth. It includes a one-story office building, one-story warehouse and several metal storage houses.

* * *

It is not an uncommon sight to encounter a house upon rollers in the middle of a street and in the process of being transported to a new location some distance away, but it is seldom that a house is taken to pieces, the parts transported 1850 miles, and once more put together again. This is exactly what has happened, however, with the residence of J. E. Storer, of Los Angeles, Cal. The Storer family recently decided to make its home hereafter in Edmonton, Canada, and for some reason, not generally known to the public, they took their house with them. A corps of workmen was engaged, the house taken down piece by piece, each carefully marked and done up in neat bundles, and loaded upon a steamship for transportation to Vancouver, and thence by rail to Edmonton.

New Jersey Chapter of the American Institute of Architects has organized for the year 1917-18 by the election of the following officers and directors: President, Gilbert C. Higby; first vice president, Stockton B. Colt; second vice president, Harry T. Stephens; treasurer, John F. Capen; secretary, Hugh Roberts; directors, George W. Von Arx, Cornelius V. R. Bogert, Jordan Green, William A. Tilton, William P. O'Rourke, Clement W. Fairweather, William H. Wolfe, James O. Betelle and J. T. Tubby, Jr.

* * *

Architectural League of New York will hold its annual exhibition of architecture, sculpture, decorative and landscape design in the Fine Arts Building, 214 West Fifty-seventh street, from February 3 to February 23, inclusive. This is practically the most important showing of architectural and allied arts made in this country, and it invariably attracts wide attention and calls out a large attendance of architects, draughtsmen, builders and persons having building projects in mind. The league always has various competitions in hand which serve to stimulate interest. Owing to the fact that the past year has been a dull one in the building line, an effort will be made to give to the coming exhibition an

unusual merit with the idea of creating a renewed interest in building work.

Upward of one billion dollars is the amount asked of Congress for military construction during the coming year. The gigantic amount of structural work involved by an expenditure of this magnitude is required for facilities to properly handle the greatly enlarged military establishment that the United States will henceforth support, and for additional plant and structures that are absolutely essential to winning the present conflict. The appropriation bill, as presented to Congress, contains provision for almost every conceivable type of building and character of construction that an efficient military and naval organization now demands. The work will be scattered over the entire nation, but with the Coastal States naturally obtaining the major portion of the total. The program involves the erection of hundreds of new buildings for hospitals, barracks, storehouses, etc., the establishment of additional fortifications and army posts; the improvement of existing forts, training stations and bases, and in general is of such a character that will for years to come assure this nation of its place in the front rank of military efficiency. Unquestionably these funds will be forthcoming and the projected work, or at least a large percentage of it, will be started at an early date after the appropriations are granted.

The markets for structural materials and supplies have been generally quiet during the past week, with new business light and inquiries for future requirements few and far between. Prices for materials are holding firmly at the levels that have now maintained for some time and in the majority of lines no substantial fluctuations are at pres-

ent anticipated. According to the present outlook no great volume of activity is expected before the advent of next spring and the current activities of the material manufacturers and dealers are devoted to plans for efficiently handling the greatly increased business that is expected in a few months.

Sec. 7. When the floor or roof load is applied to said bearing or exterior walls in concentrations of two tons or more at one place, a solid pier of brick, reinforced concrete, or concrete filled tile shall be used under each concentration, each of said piers to be not less than twice the thickness of the wall of which it is a part, and no pier shall be loaded in excess of 80 pounds per square inch of its area.

Whenever the floor slab or joists rest on hollow terra cotta wall composed of tile, with voids set vertically, or wherever a change in the thickness of the wall occurs, the course upon which the joists or slabs rest, or upon which the thinner wall rests, shall have the voids in the tiles or blocks in the course so bearing the load completely filled with Portland cement concrete, and so constructed that no joist, timber or other material whatsoever shall bear or transmit a load to the wall without having a bearing plate of iron, first quality hard brick, or terra cotta, or concrete block (filled or solid) under the same at the point where load is transmitted: And further provided, That in no case shall the area of the block to which the load is transmitted be less than double the area of the beam or other material transmitting the load.

Sec. 8. All walls hereinbefore referred to shall be constructed in the following manner: Blocks shall be set only in Portland cement mortar, composed of not less than one part Portland cement and three parts clean, sharp sand. This mortar may be tempered with one part lime paste to eight parts of mortar. Hollow blocks shall be thoroughly bonded one to another, both vertically and longitudinally, and all joints filled with mortar, and when tiles are set in the wall the vertical web of one shall occur as nearly as practically directly over the vertical web of the adjacent tile below. The blocks may be laid with voids horizontal, and with mortar joints between all blocks, or they may be laid with voids vertical, provided all horizontal bearings or joints are reinforced with metal fabric of from one-eighth to one-half inch mesh, capable of holding the mortar. This fabric shall be one-half inch less in width than the width of the wall of the course upon which it is applied, and shall be double lapped at all corners. Such web shall be spread on each horizontal course of the tile before the mortar is put on and shall be completely covered with and embedded in Portland cement mortar as the course of blocks upon it is being laid. No cutting of blocks will be allowed to admit pipes in bearing walls when pipes extend more than one-third of the story in height. The metal fabric hereinbefore specified may be omitted in

NEW BUILDING REGULATIONS ESTABLISHED

Complete Text of An Ordinance Passed by Councils and Approved by the Mayor Setting Up New Regulations Governing the Use of Terra Cotta and Hollow Tile.

The Wooden Shingles Legalized as Roofing on Detached or Semi-Detached Suburban Houses.

In November of the present year an ordinance was put through Philadelphia's Councils establishing regulations for the use in building construction of terra cotta and hollow tile. This ordinance passed both chambers of the councilmanic body and was approved by Mayor Thomas B. Smith under date of November 28. One of the interesting features of the ordinance is a section that aims to legalize the use upon detached and semi-detached houses in suburban sections of wooden shingle roofing. The complete text of the new ordinance is herewith submitted:

AN ORDINANCE TO REGULATE the use of terra-cotta in detached buildings one story in height and in semi-detached and detached dwelling houses and garages three stories and less in height, curtain walls of fireproof buildings, pent houses and bulkheads, and to regulate wooden shingle roofs on semi-detached and detached houses used for dwelling purposes in suburban districts, and providing a penalty for the violation or non-compliance with this ordinance.

Section 1. The Select and Common Councils of the City of Philadelphia do ordain, That hollow tile may be used for the exterior walls of detached buildings one story in height, detached and semi-detached dwellings, stables and garages three stories or less in height, curtain walls of fireproof buildings, pent houses and bulkheads.

Sec. 2. All hollow tile shall be dense terra cotta, free from checks and cracks, laid square and true and burned hard, so as to ring when struck, and not to absorb more than ten per cent. of its own weight in moisture. To have an ultimate crushing strength of not less than 3,000 pounds per square inch of available section of web area, and shall not be loaded when

in the wall to more than eighty pounds per square inch of effective bearing area.

Tiles shall have outer shell or wall not less than seven-eighths inches thick in its least dimension. All interior webs shall be not less than three-fourths inches in thickness. Tiles shall be constructed with at least 50 per cent. solid material.

The Chief of the Bureau of Building Inspection may require a test to be made of such blocks before allowing same to be placed in the wall if in his judgment there be any doubt as to whether such blocks proposed to be used meet the requirements above specified.

Sec. 3. No foundation wall of any building or any party wall to be constructed of hollow terra cotta tile and no hollow tile or terra-cotta wall or partition shall be supported in part or entirely by any wooden or other combustible beam, girder or post.

Sec. 4. Hollow tile exterior walls shall be the same thickness as now required for brick walls and all such exterior walls shall be plastered on the outside three-fourths inches thick with Portland cement mortar.

Sec. 5. Hollow tile may be used for interior partitions in the above-mentioned buildings; however, such partitions shall be at least three inches thick if ten feet in height, four inches thick if ten feet to fifteen feet in height, and at least six inches thick when fifteen feet to twenty feet in height, and when the length of such partition exceeds fifty feet they shall be sufficiently strengthened by cross walls, partitions, piers or buttresses, subject to the approval of the Bureau of Building Inspection.

Sec. 6. All openings over three feet in width in hollow tile walls shall have lintels composed of steel, reinforced concrete, or reinforced tile of sufficient strength to carry the load imposed.

non-bearing or curtain walls or where tile is laid in bearing walls with the voids horizontal.

Sec. 9. Semi-detached and detached dwelling houses having sloping roofs of the gambrel or straight pitch types, erected in suburban districts, may have roofs covered with wooden shingles: Provided, no portion of such roofs, including cornice, shall come within eight feet of the party lines: And provided further, That this section shall not apply to mansard roofs.

Sec. 10. Any person or persons, firms or corporations, whether owner, builder, contractor, architect or workman, who shall violate any of the provisions of this ordinance, and who shall omit, neglect or refuse to comply with said ordinance within thirty (30) days after notice to that effect, shall forfeit and pay for each violation the sum of seventy-five (75) dollars, and the further sum of fifty (50) dollars for every period of one month for which the said person or persons shall omit, neglect or refuse to comply. All the aforesaid penalties to be recovered as penalties of equal amount are, or shall be recoverable in the name and for the use of the City, and, when collected, shall be paid into the treasury thereof.

Sec. 11. All ordinances or parts of ordinances inconsistent herewith or repealed hereby be and the same are hereby repealed.

Approved the 28th day of November, A. D. 1917.

THOMAS B. SMITH,
Mayor of Philadelphia.

No. 699.

GROCERY STORE ARCHITECTURE.

A correspondent of the "Improvement Bulletin" has, perhaps, in the following article, hit upon something that architects should give serious consideration to. An enterprising citizen of a certain Minnesota town has just bought a bank building and announces that he will remodel it into a grocery.

From which naturally arises the question: "Why remodel it?" If the bank is of the solid, substantial type, sometimes designated as "monumental," a type that signifies financial strength, that defies the burglar and impresses the beholder with a sense of impregnability, it should be eminently suitable for the conduct of a grocery business. There are, perhaps, two vaults—one in which the flour and other similar valuables might be preserved, and the other containing safe deposit boxes, which might be appropriately devoted to the safeguarding of sugar, canned vegetables, potatoes, onions and other eatables whose prices have been soaring skyward.

Why not keep the bank fixtures intact? The mahogany desks of the president, vice-president and cashier of the bank might be used to advantage by the similar officers of the gro-

cery company. Why should the patron not be required to make his wants known, through the bronze grill of the teller's window, to the courteous clerk who, sitting in his cage, with a few parsnips, onions, etc., at his side, is prepared to grant the requests or fall who have established their financial responsibility?

Away back in the idyllic days, the grocery was a sort of a community affair. Its wares were displayed to the vulgar gaze on benches in front of the glaring show windows—protected by glass cases only when the health department insisted. The building was of rude construction, with no architectural pretensions, a conglomeration of shelves and counters, boxes and barrels. There was none of the effect of security and impregnability that marked the appearance of a bank. While we all admire notable examples of bank architecture, we do most earnestly hope that the act of the gentleman in the Minnesota town is but a sporadic instance and that he is not setting a precedent in grocery construction.

Purpose produces three distinct things: Courage, Self-Reliance and Concentration. These qualities will equip any man for success. Courage is the disposition of heart that inspires him to attempt great things; Self-Reliance is the temper of mind that makes him believe he can accomplish great things; Concentration is the supremacy of will that causes him to achieve great things. When these three qualities are developed to their utmost and combined in equal proportion, we can call them by one name—genius. Genius is not a freak of natural endowment, but a product of conscious evolution.—Doctor Joseph H. Odell.

Don't crowd your space, Mr. Advertiser. Better play up one selling point at a time than to try to get everything into one ad. and kill every possible chance for display. An ad. should stand out. It should be easily read. It should draw the attention of the reader. A carload of detail can't be crowded into a few inches of space and still retain the quality of sticking out as all good advertising should.

A certain wallboard man advertised in the Guide for awhile and then dropped out. We've had a dozen inquiries since then, asking for his address—every inquiry from a cash buyer. This is a common occurrence. It's hard to make some advertisers see the vital importance of a standing "ad."

The valuable man in any business is the man who can and will co-operate with other men. The foreman who opposes the introduction of a new man into an institution and fights every innovation which he himself does not suggest, is doomed to a gradual and creeping defeat. Men succeed only as they utilize the services and ideas of other men. Co-operate!

DUCK SHOOTING and COMMON SENSE

When you buy space you buy it with the expectation of getting a reasonable return on your investment. Sure you do. Now where do you stand the best chance of getting that return—in the daily newspaper, whose circulation is confined largely to people with no interest in your product, or in the trade paper, every copy of which goes to a reader directly interested and likely at any minute to need your goods?

If your hobby is large circulation, you will spend your money in the daily—but before you take this step suppose you pause long enough to figure just what percentage of the immense circulation, for which you will pay a fancy rate, is going to go where there is so much as an off-chance of it doing you any real good. FROM THE ANGLE OF THE MAN WHO HAS BUILDING MATERIAL TO SELL, FULLY NINETY PER CENT. OF THE SWOLLEN CIRCULATION OF THE DAILY NEWSPAPER REPRESENTS WASTED AMMUNITION. It is going to readers who are not interested in building material, and are not likely even in a remote sense ever to build or have building done.

IF YOU WANTED TO SHOOT DUCKS YOU WOULD NOT FIRE PROMISCUOUSLY INTO THE AIR, HOPING THAT BY SHEER LUCK SOME MISGUIDED MALLARD MIGHT ACCIDENTALLY WANDER INTO RANGE. OF COURSE YOU WOULDN'T! YOU'D GO WHERE YOU KNEW DUCKS TO BE, and, sighting a covey of 'em, you'd bang away with both barrels. So it is with advertising.

In the daily you stand an off-chance in a thousand of accidentally hitting the eye of some fellow with an interest in your line. In the trade papers, such as the Guide, you bang into a colony of readers who are interested in building above all other human activities.

The moral is—when you go duck shooting do your shooting where you know the ducks to be!

WHEN YOU WANT TO REACH THE ARCHITECT, THE BUILDER, THE BUILDING OWNER, THE INVESTOR, THE SUB-BIDDER, IN EVERY BRANCH OF THE CONSTRUCTION FIELD, THERE IS BUT ONE PRESERVE IN WHICH TO GUN:

Stores and Apartments, West Philadelphia. Architect, Chas. W. Bolton & Son, Witherspoon Building, Philadelphia. Owner, name withheld. Brick, 3 story, 33x75 feet, slag roof, steam heating, electric lighting, hardwood and pine floors. Plans in progress. Architect will take bids in a few days.

Residences (4), Herbert and Castor streets, Philadelphia, \$16,000. Architect, private plans. Owner, John C. Fotheringham, 3367 Frankford avenue, Philadelphia. Stone, 2 stories, 16x43 feet, slate roof, hot-water heating, electric lighting, hardwood floors. Owner is taking sub-bids.

Residences (2), Lawndale and Bleigh streets, Philadelphia, \$5600. Architect, private plans. Owner, L. Leitenberger, 7345 Oxford avenue, Philadelphia. Brick, 2 stories, 20x32 feet, slag roof, hot-water heating, combination lighting, pine and hardwood floors. Owner taking sub-bids.

Office Building (alt.), Eleventh and Filbert streets, Philadelphia. Architect, private plans. Owner, Bell Telephone Company, Seventeenth and Arch streets, Philadelphia. Steel, fireproof construction, fifth and sixth floor alterations, pine and tile floors, electric lighting, tile and marble work, hollow tile, metal lath, wire work. Owners taking bids, due December 21st. H. H. Burrell, 206 South Quince street; E. R. Hall, 34 South Seventeenth street; and F. L. Hoover & Son, 1023 Cherry street; F. A. Havens & Co., 845 North Nineteenth street, are figuring.

Dwelling, remodeling to synagogue, 2113 South Sixth street, Philadelphia. Architect, Herman H. Kline, Sixth and Mifflin streets, Philadelphia. Owner, Rabbi Moses Schochet, 2132 South Fourth street, Philadelphia. Brick, 3 stories, 17x33 feet, marble front, yellow pine floors, electric lighting, painting. Owner taking bids.

Photographic Studio (alt.), Administration building, emergency building and temporary storage building, Navy Yard, Philadelphia. Architect, private plans. Owners, United States Government, care of R. O'Leary, Pay Inspector, U. S. N., Philadelphia. Frame, 1 story, 18x32 feet, and 1 story, 27x36 feet. Building A, 1 story, 100x600 feet. Building B, 1 story, 70x347 feet. Building C, 1 story, 30x100 feet. Building D, 1 story, 25x115 feet. Ready roofing, roof ventilators (heating and lighting reserved). Low bidders, McCloskey & Bahlis. Total, \$49,513. Studio, \$1630; time, 45 days. Hospital, \$2198; time, 45 days. A, \$36,389; 90 days. B, \$7447; 60 days. C, \$2882; 30 days. D, \$2493; 30 days. Total time, 70 days. Edw. Fay & Son, Total, \$49,970. 90 days. Studio, \$2495; 60 days. Hospital, \$2995; 60 days. A, \$37,389; 90 days. B, \$8498; 60 days. C, \$2898; 30 days. D, \$2347; 30 days. Wills-Ludwick Co. Total, \$50,000. 120 days. A, \$33,300; 45 days. B, \$9293; 30 days. C, \$3515; 30 days. D, \$3495; 30 days.

Elevated Stations (4), Frankford Elevated, Philadelphia. Architects, Department of

City Transit, Bourse Building, Philadelphia. Owners, City of Philadelphia, Department of City Transit, Wm. S. Twining, Director, Bourse Building, Philadelphia. Brick, reinforced concrete, stone and terra cotta, 2 stories, tile and slag roof, cement floors, hollow tile, tile, marble and terrazzo work, rolled steel sash and skylights, hollow metal sash and doors, fire doors, iron stairs, cement floors, hollow tile, safety treads, roof ventilators, metal ceilings, wire work, ornamental iron work (electric work and plumbing separate bids). Owners taking bids, due December 27th at noon. Ketcham & McQuade, 1029 Brown street; Standard Construction Company, 1713 Sansom street; F. W. Van Loon, Denckla Building, and Mitchell Bros., 2125 Race street, are figuring.

Theatre, Broad and Lombard streets, Philadelphia. Architects, Lachman & Murphy, Drexel Building, Philadelphia. Owner, The Dunbar Amusement Corporation, care of architects. Brick, stone and reinforced concrete, 1 story, basement and gallery, 78x129 feet, slag roof, steam heating, electric lighting, tile, marble and terrazzo work, pine and cement floors, metal lath, fire escapes, ornamental iron work, automatic sprinklers. Architects taking bids due January 2d. Standard Construction Co., 1713 Sansom street; Alex. Chumbley, Twenty-first and Summer streets, Philadelphia, and F. H. Kaiser Co., Pottstown, Pa., are figuring.

Residences (20), West Philadelphia. Architect, Mahlon H. Dickinson, Bellevue Court Building, Philadelphia. Owner, name withheld. Brick, 2 stories, 24x32 feet, slag roof, electric lighting. Plans in progress. Architect will take bids in two weeks.

Residence, Moylan, Pa. Architect, Bart Tourison, Land Title Building, Philadelphia. Owner, Howard W. Underwood, Moylan, Pa. Stone, 2½ stories, 30x50 feet, slate roof, hot-water heating, electric lighting, hardwood floors. Plans in progress.

Residence, Germantown, Pa. Architect, Geo. S. Idell, 34 South Sixteenth street, Philadelphia. Owner, name withheld. Brick, 2½ stories, 30x40 feet. Plans in progress. Too early for details.

Stations (4), Torresdale and Kensington avenues and Tioga street and Kensington avenue, Frankford Elevated. Architects, Department of City Transit, Bourse Building, Philadelphia. Owners, City of Philadelphia, Department of City Transit, Wm. S. Twining, Director, Bourse Building, Philadelphia. Brick, concrete and steel, 2 stories, 49x22 feet and 3 stories, 64x30 feet, slag and tile roof, cement floors, electric lighting, tile, marble and terrazzo work, rolled steel sash, hollow metal sash and skylights, fire and hollow metal doors, iron stairs, ornamental ironwork, hollow tile, metal lath, safety treads, roof ventilators, metal ceilings, wire work. Owners taking bids due

December 27th at noon. (Specification report.)

Restaurant and Apartments (alts.), 124 S. Thirteenth street, Philadelphia. Architects, Henon & Boyle, 10 South Eighteenth street, Philadelphia. Owner, J. G. Patton, Fifteenth and Chestnut streets, Philadelphia. Consists of general interior alterations, tile and marble work, steam heating, electric lighting, tile and hardwood floors, dumb waiters. Plans in progress. Architects will take bids in about three weeks.

Bank Building (add.), Front and Norris streets, Philadelphia. Architect, Paul A. Davis, 3rd, 1713 Sansom street, Philadelphia. Owners, Ninth National Bank, Ira W. Barnes, president, on premises. Brick and stone, 20x110 feet. Plans in progress. Too early for details.

Service Building, North Broad street, Philadelphia. Architect, J. Ethan Fieldstein, Hale Building, Philadelphia. Owner's name withheld. Brick, 3 stories, 20x150 feet, slag roof, electric lighting. Plans about completed. Will take bids in a few days.

Store and Apartments (alt. and add.), 219 South Broad street, \$50,000. Architect, Carl P. Berger, 1416 South Penn Square, Philadelphia. Owner, W. E. Adams, on premises. Brick and stone, 4 and 3 stories, 35x133 feet, consists of general alterations and changing upper floors into sleeping apartments. Plans completed. Architect will be ready for bids in a few days.

Pier No. 78, South Wharves, Philadelphia (completion). Architect, private plans. Owners, City of Philadelphia, Department of Wharves, Docks and Ferries, George S. Webster, Director, Bourse Building, Philadelphia. Consists of interior finishing, concrete floors, elevator and general equipment, electric lighting. Owners taking bids, due January 8th, 1918.

Coating Building, Second and Erie avenue, Philadelphia. Architect, private plans. Owners, Thomas Potter Sons & Co., Inc., Second and Erie avenue. Brick, concrete and steel, 1 story. Plans in progress. Too early for details.

It isn't enough to just advertise. There is competition these days in advertising, as in other things. You must make your advertising attractive. You must make it say something—something definite, original and convincing. If you lack faith in your own ability to do this, let us do it for you. Give us the facts. Talk to us just as you would to a prospective buyer. That is the kind of talk that makes profitable advertising. We'll look after the verbal frills. That's our business.

No one suffers from a mean disposition like the fellow who has one.

phia, \$1,647. Architect, private plans. Owners, U. S. Government, care of C. R. O'Leary, Pay Inspector, U. S. N., Philadelphia. Frame, 1 story, 18x32 feet, Ready roofing, roof ventilators (heating and lighting reserved). Contract awarded to Lam Building Co., 1001 Wood street, Philadelphia.

You owe it to yourself to keep in touch with what is going on in the trade, and you can do this only by becoming a subscriber to and regular reader of your trade paper. If you are not a regular reader of the Builder's Guide you should be. The cost is not excessive. A five-spot insures it fifty-two times in the course of a year.

When you stop to consider that the Guide reaches every week and is read by architects, builders, building owners, contractors and sub-bidders in every branch of building construction, you must perceive its unique importance as a medium for advertising with an appeal to that class. Every copy reaches a live prospect.

We'll write your advertising without charge. All we ask is that you pay for the space and provide our ad. man with the necessary selling pointers.

Advertising is nothing more nor less than good salesmanship reduced to print. The business man who can put "sales talk" into type has learned the cardinal principle of good advertising.

CONVENIENCES IN POPULAR DEMAND

Prospective tenants and buyers want to know how they are going to keep warm in the chilly mornings and evenings of the early Fall and late Spring, when it isn't practical to have the furnace going.

If you can point to a Baseboard Gas Outlet in each room to which Gas Heating Stoves can be readily connected your Prospect is then assured of a quick, clean and economical method of getting the desired auxiliary heat.

'Phone or write to the Builders' and Operators' Division.

Philadelphia is one of the busiest building centers in the United States and "The Guide" is the only medium that touches this golden field.

Buy pure lime, 99% pure, no core, no grit. **DAVID FRANCE CO.**,
Tasker Street Wharf. Delaware River, Phila. Both 'phones.

Advertising is the proper education of the public as to where the thing can be found, and therefore it is a necessity.

We are parts and particles of each other, but a little of the kindly glue of human brotherhood is needed to fasten us together. The policeman who keeps the crossing clear, and at the same time informs us as to the location of the post office and the First National Bank, no doubt is, in one sense, an economic waste. On the other hand, he is an economic necessity. He is a necessary middleman.

He relieves the congestion of traffic and granting the hypothesis that he does not misdirect us as to the location of the post office, he speeds us on our way.

Advertising is telling who you are, where you are, and what you have to offer the world in the way of service or commodity.

If nobody knows who you are, or what you have to offer, you do no business, and the world is the loser through giving you absent treatment.

Life is too short for the consumer to employ detectives to ferret out merchants who have the necessities of life to sell.

It's the Long Fire Travel in the Burnham Cosy Comfort Boiler That Makes the Short Coal Bill

IF you can keep the hot gases and smoke travelling back and forth inside a boiler long enough to extract the bulk of their heat, and still not make the draft sluggish; it's plain enough that less heat will go up chimney and more heat go into your radiators.

That back and forth action is what we call fire travel. It's this long fire travel in the BURNHAM Cosy Comfort Boilers that has a lot to do with making their short coal bills.

3102 Euclid avenue. Concrete, 1 story, 169x80 feet, slag roof.

An old legend tells of a magician's vase; the magician could get out of it only that which he put in. Advertising is just that. If you don't get into it the "kick" of salesmanship it is going to miss by just that much the pulling power it ought to have.

All advertising pays—even that which is poorly constructed. A bad ad. is better than no ad. at all. It is worth all that it costs in the competitive world of the present day, merely to keep one's name where the possible buyer cannot help seeing it. To be out of sight in the commercial world is to be out of mind.

Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!

People who want to buy things do not catch the seller, chloroform him and cram the orders into his pocket.

Washed Bar Sand and Gravel will take less cement on concrete work. We know how.

RUSSIAN TIMBER.

Russia, it is stated, has almost one-half of the world's standing timber acreage.

A Russian information Bureau has been set up in the Woolworth building, New York City, operating in connection with the American-Russian Chamber of Commerce. The bureau announces that it has been established by the Russian provisional government and that it is in constant cable communication and correspondence with Petrograd and will aim to disseminate in America authentic information in regard to the economic, financial, political and cultural conditions in Russia.

It is significant that the first bulletin issued by the bureau treats of the timber industry in Russia.

Director A. J. Sack, of the Russian Information Bureau, says that during the year 1915 the debit balance of Russia's foreign trade was large, but during 1916 it was almost trebled. The question of turning the balance in favor of Russia is one of the most important problems of Russia's economic life at the present time.

"This problem is solved in a very interesting manner by the possibilities in the development of Russia's timber industry. The timber export even nowadays holds second place, following grain, in Russia's export trade."

"The development of Russia's timber industry and the export of Russian timber to the European market means for Russia the practical solution of most of her financial difficulties that are bound to arise after the war. The development of the timber industry will create a favorable foreign

trade balance and will assist in the payment of the national debt. American capital is familiar with the problems connected with the development of the timber industry, and American capital should therefore play a great part in the proper development of the timber industry in Russia. There is an opportunity in this connection for American timber interests and every effort should be made to assist Russia in the development of her timber industry in order that American capital can share in the rewards."

Proposals

Bonds. Improvements. Equipment.

As the Home Office and Headquarters of the Most Important Financial, Railroad, Engineering, Structural, Manufacturing and Equipment Firms in the United States, Pennsylvania offers a Particularly Rich and Productive Field for "Proposal" advertising. "The Builders' Guide" is the Only Medium in this Field.

INVITATION FOR PROPOSALS.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., December 1, 1917.—Sealed proposals will be opened in this office at 3 p. m. January 14, 1918, for the construction of the United States post office at Owego, N. Y. Drawings and specifications may be obtained from the custodian of the site at Owego, N. Y., or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

If your proposition is one that should appeal to architects, builders, building owners, decorators, material and supply concerns, "The Builders' Guide" is the right medium for your advertising and cannot fail to bring you profitable returns.

Do not fear advertising as an expense, but court it as an asset, for that is really what it is—a value unseen, but determined from results.

ADDING INSULT TO INJURY.

We learn from the "London Builder" that much satisfaction has been caused in Belgian circles in Holland, according to a Central News telegram from Amsterdam, by the German statement that the Germans do not intend, as was at one time reported, to undertake the rebuilding of Louvain. The "Echo Belge" remarks that it is bad enough that the Germans should have destroyed Louvain, but for them to rebuild it in the German style would be even worse.

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

WHEN BUSINESS AND THE GOVERNMENT GET TOGETHER

By Ellis L. Howland, Special Representative, National Industrial Conservation Movement.

Our part in the final act of the great tragedy is not only to make "the world safe for Democracy," but Democracy safe for the world. The splendid answer which has been recorded to the riddle of our great national melting pot when ten million young men marched bravely to the roll of honor and inscribed their names, has already gone forth to a doubting world. The tears and cheers with which we sent them on their way, but a few days ago, are still fresh in mind and we will share the confident assurance that the traditions of the forefathers will bring Old Glory back with fresh laurels from Flanders, Alsace and the gates of Berlin.

The patriotic response of American industry has been quite as glorious as that of our conscripted host. However much of justice there may have been in the taunts of rival nations that we were a nation of shop keepers and a country of money-making, the American business man has registered the unquestioned fact that his commercialism was not practiced at the sacrifice of patriotism and loyalty. And, however great our wealth, we have not forgotten the significance of our "Commonwealth." At the behest of the President money, industrial plants, farm acreage, men, brains, brawn and every other resource was poured unstintingly on the altar of our common Liberty.

We may not be a nation of military motives, but we are proving ourselves a nation of common purpose. Whatever of commercialism there may have been about our activities of the past, there has come into them to-day a new conception of our obligation to the country and the public welfare. Men whose wealth transcends that of the fabled Croesus, have laid it all at the feet of Uncle Sam. Labor, which has been about the most militant of our institutions in its aims and organized purposes, has laid aside selfishness and through its accredited leaders pledged itself to serve the nation. Captains of industry in every walk of life have left their tasks voluntarily and placed their services, their brains and their experience at the disposal of the Government. The American farmer has planted and harvested such a store of food as was never known in this or any other land. And the women of the land are bending every effort to conserve it for ourselves and our Allies.

Problems of the Reconstruction.

It is a time to make every American, whatever his station, proud of his citizenship, his heritage of patriotism and our national spirit of loyalty and determination. But, if I may reverse the old admonition: "In time of peace

prepare for war," I would say to you to-day, "In time of war prepare for peace." The war has shaken humanity to its very foundations. Not only are nations hanging in the balance, but our social, industrial and economic institutions are facing most radical readjustments.

In the past we have had strata of society, based upon culture, or wealth, or lineage, but after men of all ranks and conditions have faced death, shoulder to shoulder in the trenches in defense of a common principle the old distinctions can never again prevail. We have become as never before, a common people; not only in the trenches, but in the workshop, the office and on the city streets.

The ending of the war will precipitate new conditions in every line of human relation. Friendships among nations will readjust commercial exchange; the money wastage of the war will saddle upon us all burdens of taxation which will demand unheard of economies. The losses of men and of plants in the devastated districts will weigh heavily upon reconstructed industry. Poor bleeding Belgium, for instance, once a veritable bee-hive of industry, has been stripped of every machine and every reconstructive resource. Whole enterprises have been shipped bodily to Germany, while the human element can never wholly be restored. Whatever human enterprise once did may never be repeated and no man can predict the future of industrial Europe.

Readjustments of borders will call for readjustments of trade. The entrance of women into industry will be an economic factor of no small consequence and the losses of world tonnage and the restoration of traffic are problems which will challenge all our preconceived ideas. How few of us realize that the available carrying tonnage of our overseas commerce has suffered the loss of over 3,400 ships and whose capacity was 9,800,000 tons. Before world commerce can again become normal this must be restored and new routes and commercial connections established. In America we have just awakened to the fact that no nation is safe so long as her foreign trade is at the mercy of foreign flags. The new world must find us possessed of a merchant marine commensurate with our place in the producing arena. Not only should America play a part in the rebuilding of world commerce, but our new birth into a broader place under the sun is going to force us to new ideals.

American Industries Need New Public Attitude.

Competition is going to be strenuous to a degree never before known, responsive not only to the relative efficiencies of nations, but subjected to the influence of new friendships,

preferential commercial alliances and surviving international hatred that will greatly complicate the recovery of trade and the holding of world markets. The more one delves into the probable circumstances of reconstruction, the more we are impressed that Europe's war has changed the whole world.

And how are we prepared to meet this crisis? Can we boast a reassuring measure of German efficiency and organization? Or of French economy? Or of British determination? Have we till very recently even thought of our tremendous industrial development as a national asset, in which every citizen had an interest and which could be—has been—instantly converted from a private possession to a national bulwark? The world war has brought about a new realization, but before it can be fully effective, we must adopt a new attitude of common concern for the welfare of industry.

Is our industry to-day organized on a basis of efficiency? Or are we torn by industrial uncertainties as to who shall direct, controversies as to the division of the fruits of industry, mistaken relations between business and the Government, sadly involved in a maze of half-baked notions about business and economics, and largely moulded by prejudices and theories, rather than by experience and fundamental facts? Out of an attempt to play politics are we saddled with unwise and partisan laws and a very serious remnant of class hatred and wasteful animosity?

Plans for after the war reconstruction are already engaging the best thought of other nations and all along the line, just as intelligent plans for rehabilitating business are in progress—in England, France, Japan and even in Germany—as there are for the prosecution of the war.

New Era of Business Development.

The lesson of the hour is that we have been wrong in our attitude toward business. We neglected to annex Big Business to our national institution by helpfulness and encouragement and friendly co-operation. Rather we antagonized it, meddled with it, interfered with it; regulated it by political quibblers rather than business experts. Nor was this fallacy confined to governmental circles for it was the same false principle which moved popular sentiment and the attitude of the press. Could anyone expect the highest efficiency under such conditions of misunderstanding and animosity?

In the reconstruction this must all be changed and will be. Already the truth is dawning. Men who in the past could never have been coaxed into sympathetic co-operation with official life at Washington, have acquired an enthusiasm for it which will last far beyond the war, if properly encouraged. Call it Socialistic if you choose, but when the right kind of sympathy and understanding and co-operation are set up between the Government and

Our specialty is Portland Cement that will stick and pass the City Department. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

the men who mould the destinies of our great industries, there opens a new era of prosperity for us all.

Personally, I look for a new type of business official in Washington in the future and a higher type of commercial intelligence. Uncle Sam has never kept pace with industry in paying salaries which would attract and keep the best men in his employ. Business drew them away and their brains and talents and abilities and idealism was devoted to the building up of private rather than public interests.

Our Patriotic American Manufacturers.

I wonder how many of you realize the significance of the great sacrifices which our manufacturers have made for the cause. True, the war gave them great opportunities, but not so great that they forgot their civic duty. I know of no great business organization which has not voluntarily placed its entire resources at the command of the Government—plants, men, patents, business secrets and business connections. Representative associations in every line have passed resolutions placing the services of officials and members at the disposal of the President. Thousands of leaders—and men of small ideals do not rise to leadership among their fellows—have closed their desks and hurried to Washington to aid in the intricate tasks of the time; without compensation and working at their own expense. There has never been in Washington, working for the national welfare such an aggregation of business ability, and to these men, quite as much as to the ten million in khaki, can be traced our effectiveness in the war. No amount of money could buy it; it was the free-will offering of patriotism.

In precisely the same way it has been big business men with big, unselfish ideals who are shaping our national course along new paths and amid the uncharted seas of Government control. Business men have never seriously resented an intelligent application of public supervision; but they have resented governmental meddling, by politicians whose aim has been too commonly to exploit business men as rascals and enemies of the public welfare for the glorification of their own ambitions.

When business men realized that the time had come for close-hauling our individualism they rallied under the leadership of such men as Herbert Hoover, Thomas A. Edison, Howard E. Coffin, Bernard M. Baruch, H. P. Davidson and others—men of business experience who understand business motives and the operation of commercial principles. There was no longer either opposition or hesitation, but rather cordial co-operation. Convinced that it was for the benefit of the nation and that fair treatment was to be the order of the day, America's business men have thrown into the national crisis such a gigantic resource of organized industry as staggers the world.

Sacrifices by Good American Business Men.

Scores of resolutions have been adopted by business conventions in all parts of the country, pledging individually and collectively their entire possessions and services for the national defense. How many of you realize that in every branch of trade and industry, managers have been studying ways to prune expenses and place their plants on the highest pinnacle of efficiency, to the end of keeping prices down and to permit the release of as many employees as possible for national defense? It has not been a question of price, or profits with the American business man; whatever Uncle Sam needed in their control he could have for the asking.

It took a Hoover to realize that the secret of efficiency was not to fight and hamper and confiscate the business man, but rather to enlist him. He realized that the patriotism and loyalty of business and industry was of just as fine a quality as those of any other men. He realized that the secret of efficiency was acquiring the men with the best experience and employing their ability.—“American Industries.”

HOUSES FOR SOLDIERS IN FRANCE

Three hundred million feet of Southern pine will shortly be contracted for by the Government to erect portable knock-down houses for the use of American troops in France as hospitals and barracks quarters, says a recent bulletin of the Southern Pine Association.

Means to promptly meet the nation's requirements for housing millions of soldiers abroad were discussed at a general conference of lumbermen held recently at New Orleans by the Southern Pine Emergency Bureau. Plans prepared by War Department architects were submitted. These plans provide for houses to be made up in panels, put together by bolts, shipped knock-down, and bolted together by soldiers in France. Although the lumbermen saw no difficulty in carrying out the general idea outlined, present specifications were regarded as in many respects impracticable from a mill standard.

It was the general opinion of those present that best results could be obtained by a co-operative effort of lumber manufacturers and contractors. Use of material of standard sizes was also urged. The lumbermen considered that they should not undertake the manufacture of panels, a work with which they are unfamiliar, but that they should confine their efforts to producing the lumber needed, and delivering this lumber to contractors, who would engage carpenters to put together the boards in such form that they might be easily converted into buildings.

Labor is unobtainable in Europe for construction purposes; hence the idea of panels to be bolted together.

One way to escape the income tax is to quit advertising and do less business.

USE LOCAL BUILDING MATERIALS.

One way of saving transportation facilities, suggested by “Western Engineering,” is through study of local building materials for construction work. In ordinary times materials can be brought from a distance and used because they are better known or more easily handled, but with freight shortage, study of neglected local materials is justified, these often proving just as suitable as the imported article, and not only saving freight but encouraging local enterprise. Another way of saving freight is to use bulk cement on jobs where fifty barrels or more per day are required. This reduces shipping space and saves the cost of sacks and barrels.

PAINT TALK.

Mr. S. P. Jarden, manager of Sherwin, Williams Company, and an authority on paints, was an invited guest at the October meeting of the Master Tin and Sheet Metal Workers’

In the course of an instructive talk, Mr. Jarden stated that he considered red lead the best paint for a metal roof, because it seemed to have a natural affinity to the metal itself. Next to this oxide of iron, or metallic brown, was best.

Good paint is composed of oil, dryer and pigment, in proper proportions. For the sake of uniformity and the proper balance, Mr. Jarden advocated the use of the ready-mixed paints.

To forestall questions as to why the same paint wore differently in different sections of the same city, he claimed that there is a difference in the rain. For instance: rain falling in the vicinity of the Vore incinerating plant downtown will be mixed with sulphuric nitrates. Rain-fall in the northeast section, where there are glue and fertilizer works, will contain a solution of sulphuric acid. In the neighborhood of a vinegar factory the rain will be mixed with acetic acid, and all these chemicals have a damaging effect on paint and metals.

Regarding the oils in paint, besides linseed oil, the new China wood oil is good. This latter oil has only lately come into use, and is made from the nut of the tung tree.

Paint, of course, is the great necessity for prolonging the life of a roof, and Mr. Jarden recommended the association members to keep a card index of their customers, and remind them by postal card when they should have their roofs re-painted.

Red lead should be the first paint applied, because of its affinity to the new metal, it seeming to become a part of the metal itself. He did not consider that the season of the year made any appreciable difference in painting, as it was impossible to tell a roof painted in July from one painted in December; just so you don't paint when there is likely to be a frost the first night.

As The Editor Sees It

A RATHER novel and not unmeritorious suggestion, dealing with the practice of architecture and advertising, is advanced by the Publicity Committee of the Illinois Society of Architects. Recognizing the fact that by reason of ethical consideration the architect is debarred from advertising as an individual the Illinois Society, through its publicity committee, suggest the advisability of general advertising, by associations of architects, along the line of educating the public to an intelligent understanding of the architectural function. Quoting from the committee's recent report of the subject:

"It is a well-known fact that our daily papers depend upon their advertisers for financial support. Architects as individuals are not advertisers. Then why should the press publish items or opinions from a class of business men who do not contribute directly to its support? They should not any more than we should render free service in preparing preliminary plans. No one places value upon an architect who distributes free sketches, pretty plans and pictures to all who may desire them. Neither does any one value the opinion of a paper that renders free advertising for the asking. The best papers no more advertise without compensation than the best architects render preliminary sketches and perspectives without compensation.

"True, we cannot and should not advertise as individuals, but there is no reason why the public may not be in-

formed as to what an architect is, what service he should render his client, and why an architect should always be employed not only to prepare the plans, but to supervise the construction of the building. The average person does not know what the duties of an architect consist of. Some think he is a sort of a contractor and bids for work, others that he is a draughtsman who prepares plans under the contractor's instructions, or that he is a necessary evil to whom you pay a commission for some pieces of blue paper. But very few realize the long hours of hard work, earnest work spent in preparing the plans and specifications and the care and integrity exercised in supervising the erection of the building.

"Whose fault is it that these facts are not more generally known? The Architect's. Why not, then, as a society, tell the public who and what we are? Buy our space like business men and help to educate the public to the advantages of having an architect. If you members will spend less money on free sketches and invest in collective publicity the result will be the best investment you have ever made."

* * *

WHILE at first glance the proposition here presented is one that may strike the average practitioners as perhaps both revolutionary and preposterous, very little consideration of the point at issue must convince even the most hidebound of conservatives that there is sound sense back

of the dominating idea. The public undoubtedly needs to be educated to the importance of the niche the architect occupies in modern affairs, and conceding this there can be no better or more direct way of educating the public than through the agency of advertising. The trade and technical press, it is assured, may be counted on to lend the fullest support to any movement of the kind the profession may decide to undertake.

* * *

AN interesting point in law, touching the right of an architect to proceed under the Mechanic's Lien Law, of Illinois, to recover for the expense incident to the preparation of preliminary plans, when the work was not proceeded with, was recently decided by the Supreme Court of Illinois in the case of Nimmons vs. Lyon & Healy. The attorney recovered for the architect the expense of making preliminary plans. The following account of the case is taken from the *Monthly Bulletin* of the Illinois Society:

Mr. Nimmons prepared preliminary plans according to the various suggestions and changes suggested by Lyon & Healy, and after the preliminary plans were about satisfactory, Lyon & Healy gave the job to another architect, and claimed Nimmons was simply competing for the job with his preliminary plans. The evidence showed Mr. Nimmons was not competing for the job and that he was entitled to recover for his work in drafting the preliminary plans. The

KEYSTONE PHONE, MAIN 497

**BLUE
PRINTS**

great question in the case was whether Mr. Nimmons could get a lien on the land in question for making preliminary plans for a building, which was, in the strict sense of the word, not constructed.

A somewhat different building, four stories, instead of three stories, as originally planned by Nimmons, was constructed by another architect on the same premises.

We contended for Nimmons that the Illinois statute relating to mechanic's liens gives the architect a lien on the land for services performed in preparing plans for the purpose of a building on the land, whether the building is actually afterwards built or not, and whether the architect superintends the construction or not.

The case was decided in the 179 Illinois, Appellate, page 376, and the Court held that the above contention was correct, and that an architect who draws plans and specifications for a building to be erected upon a designated spot performs services for the purpose of building it so as to be entitled to a mechanic's lien, even though he does not superintend the construction of the building, and even though a building of the same identical character is not erected.

* * *

THE Court, in this case, further held that an architect who agrees and draws plans and specifications for a building for a certain price, will not be denied a lien for the contract price upon the performance of his contract merely because the architect presented a bill for a less amount, where his bill was intended as a compromise offer of settlement and the compromise offer was not accepted.

In this case Mr. Nimmons recovered his contract price for preliminary drawings, of \$2,000, besides his costs. Before beginning suit he had offered to settle his claim for \$1,600, which was refused. The supreme Court denied further appeal, and thus the decision of the Appellate Court is final.

The question whether an architect can recover under the mechanic's lien act for preliminary drawings for a building which is not afterwards built, and which, of course, he does not superintend, has been in doubt in this State, until the Nimmons case was decided. In most other States an architect cannot recover a lien for such services under the mechanic's lien laws. In Illinois, if the case is presented in a proper manner, an architect can recover for preliminary drawings, even if the work is abandoned, provided of course that the architect was employed to make preliminary plans for a contract price, or for the understood customary price charged by architects.

IN the introductory paragraphs to an article on "A Relation to the Colonial" in the pages of the *San Francisco Architect and Engineer*, Albert Farr takes an airy and diverting view of the development of architectural style.

"In these days of jazz bands, bungalows, chewing gum and other nervous disorders," writes Mr. Farr, "it is a relief to discover evidence of a return to the simpler ways of the forefathers of our country. There is no more refreshing indication of this than is shown in the renewed interest in Colonial architecture, with its well ordered forestation, direct plans and carefully studied detail, modern examples of which are beginning to show in the suburbs of many of our cities.

"Arising as this style undoubtedly did from the classical studies of our ancestors, its culture plainly shows the opinions of their day. Housed within its simple dignity we may imagine Thomas Jefferson, let us say, seated on a Sheraton chair, arrayed in georgian splendor, clay pipe in mouth and Plato's Republic in hand, dreaming of his country's future government patterned to an antique and lofty standard.

"For books and living, which is mostly housing, go hand in hand—and politics and government follow—classic learning was the culture of the 18th and early 19th centuries, gentlemen of England and France, priding themselves not alone on their Greek and Latin, but upon their knowledge of art and architecture as well, and we Colonials followed dutifully in the paths of our betters.

"Whatever this knowledge may have been, it was probably inexact, and citing from an earlier period, we read in Evelyn's Diary his description of the long since destroyed royal manor of Nonsuch, done 'in the Italian manner,' it is obvious that Nonsuch was not Italian at all, but excellent Jacobean. So of the period of which we consider, we probably had a similar intent to follow older exemplars and arrived at much the same goal as King Charles' Surveyor.

"To sum up our beloved 'Colonial' is but an attempt at transplanting the English Renaissance of the Georges, tintured from necessity to a greater or lesser degree by the Adams brothers, with something somewhat French, somewhat of late Rome, and considerably of the Greek of Pompeii. The necessity spoken of was lack of material and of skilled labor, as that much of internal work, such as mantel pieces, grates, and print swags was bodily brought from London.

"The learning thus acquired and the material imported were poured into a newer mould, to which our Dutch forbears had something to add, with the aid of Vignola and Palladio, antiquarians themselves.

"Necessity, the parent of all architecture, forbade the use of surb stone at all and not much of any other kind.

"So, as before, in centuries past, a 'style' came into being with countless offspring, some bad, some indifferent, but many worthy of earnest consideration. We may place this period in the latter part of the eighteenth and earlier nineteenth century."

* * *

MUCH the same line of thought animates an article, "The Spirit of the Colonial," contributed by Phil M. Riley to a recent number of *Hogson's magazine*. Says Mr. Riley:

"Every country has a dominant style in architecture possessed of distinguishing traits expressive of the character and life of the people. It is a living style representing the best thought of its builders, always definitely related to what has gone before, yet ever capable of higher refinement and broader adaptation to express the spirit and meet the needs of each successive generation; it is a style that develops, but never grows old.

"In the United States we have the so-called Colonial style, the one distinctive type of American architecture that is known throughout the world. Sometimes referred to as merely a Yankee name for Georgian, an English revival of the classic in America, it is that and much besides. Including the several Renaissance expressions of the Dutch and French as well as the English peoples in America, it evolved among us, adapting itself to the lives and supplying the needs of our forefathers. Its early manifestations were almost too simple to deserve consideration, but about the end of the eighteenth century it became the very flower of our domestic architecture, the priceless heritage of our nation.

"When our forebears in England were first moved to admiration by the Renaissance in Europe, Wren, Jones, Chambers, Adam and their associates turned to Italian architects, notably Palladio and Vignola, for inspiration, and unhesitatingly adopted those clever motives and details of another time and people. These were copied and utilized with relatively little creative ability or imagination and became characteristics of the so-called Georgian, a Renaissance expression differing from the Italian chiefly in the absence of that remarkable subtlety of outline and proportion achieved by the master architects of the Latin race.

"In America results were happier, very largely because of the translation from stone into wood, of which so many houses were built. The shipbuilding industry of New England also developed many highly skilled wood-carvers, whose art lent additional refinement. Through these two influences heavy Georgian motives gave way to the lighter, more grace-

ful designs which we admire so much.

"The inspiration was partly English, it is true, but Palladio and Vignola were studied as assiduously as in Great Britain, with the result that contemporaneous American designers succeeded in improving upon the somewhat colorless Georgian to the extent of placing upon their adaptations the indelible stamp of their strong character, high ideals and simple life-habits. Not subservient to the style, they dominated it, molding it to their modest needs and making exterior appearance frankly express interior arrangement and domestic uses; they gave to it a distinctive character which the English Georgian lacks.

* * *

THANKS to the lasting appeal of its real merit and to the horrors of that illogical period of architectural decadence now referred to as the Victorian era, the Colonial tradition persists to-day more firmly entrenched than ever in American esteem. The stoppage of that attempted revival of mediæval styles and ill-advised transplantings from distant lands through the general suspension of building was one of the few happy results of the Civil War.

More new houses are now being built in the spirit of our eighteenth and early nineteenth century farmhouses and mansions than with any other guiding motives. Their basic principles and details are still in constant use, often employed in original ways to fulfill the new purposes of our ever-changing life, but always closely associated with the spirit of the original usage. By this broad application great diversity of design is permitted, yet a very desirable restraint is exercised through the influence of that which has gone before.

"Colonial is a comprehensive term including much of a widely differing character. Surely we have ample evidence that it is broad enough for almost any purpose. This diversity is one of its principal charms. How different yet how similar are the new England farmhouse, the town houses of Salem, Boston, Philadelphia and Baltimore, the Dutch Colonial cottages of New York and New Jersey, the Pennsylvania farmhouse and the stately mansion of the South!

"The motives and details are much the same and relatively few in number, yet how varied are the effects as the whole mass of the structure, the contour of its roof, the doorway and other details of its facade differ! They are the result of dissimilar adaptation according to the state of affluence, racial characteristics, taste, skill and local materials. Monotony through too great similarity of neighboring houses must surely be the fault of the architect rather than of his medium of expression. No such monotony

exists even in old cities such as Salem, Massachusetts, where nearly every building worthy of notice is Colonial.

* * *

THE real adaptability of the Colonial style to the needs of the present day and such new uses and refinements of the modern homes as piazzas, sleeping-porches and sun parlors, is due to the fact that its beauty lies chiefly in nice proportion and graceful ornamentation of its motives. These very qualities, however, are responsible for most of the failures of adaptation. In styles incorporating a profusion of detail, salient points are often so confused as to result in an apparently suc-

cessful adaptation; not so in Colonial. A well-known architect has truthfully said that in Colonial design there is no more latitude for "faking" than in the delineation of a circle; either it is perfect or it is not. It follows, then, that old houses which are selected as models for purposes of adaptation should be chosen with the utmost regard for their harmony of motives, nicety of proportion and refinement of detail. Inconsistencies result when proper distinctions have not been made, and in this connection the services of a skilled architect and experienced builders of wide knowledge and sympathetic interest are not only important, but really are invaluable."

EDITORIAL NOTES

Federal construction remains the predominating element in the structural industry, and the immense volume of business emanating from this source is almost wholly responsible for what activity is current. New building operations for military purposes are being announced daily by the authorities at Washington, and the total amount of money that the Government is expending for its preparations for offense and defense will reach an amazing figure.

* * *

Former Rear Admiral Francis T. Bowles, head of the construction department of the United States Emergency Fleet Corporation is quoted as saying recently at Baltimore that he had been authorized to lend enough money to build 1,500 houses for workmen at the Sparrows Point branch of the Bethlehem Steel Company.

* * *

Pittsburgh building reports for November show a total of \$2,543,918. This was a gain of \$790,000 over November, 1916, and \$103,000 over October of this year. The increase has been much remarked about, as it shows a disposition among builders to break away and get into the game again.

* * *

Undoubtedly a very large volume of Government building is to be executed in the near future. According to reports received the Government program comprises upward of \$1,000,000,000 worth of military construction during the coming year. The appropriation bill presented to Congress contains provisions for almost every conceivable type of building and character of construction that a thoroughly equipped naval and military organization demands. This work will be scattered all over the nation, although the Atlantic Coast States will naturally obtain the major portion.

* * *

Present indications are that the Gum Lumber Manufacturers' Association and the American Oak Manufacturers' Association will be

merged into a strong centralized organization, that will perform the functions of these two bodies and at the same time cover a much wider field than either has been able to cover separately, at the annual meetings of these associations to be held in Memphis the third week in January.

* * *

Since considerable of the data in the "Rules and Regulations of the War Trade Board," which has been distributed very widely throughout the country, has now been superseded by new rulings and lists, the Division of Information of the board is preparing a "War Trade Board Manual for Shippers," which will contain only data in force at the time of its publication.

* * *

The 33rd Annual Exhibition of the Architectural League will be held as usual in the Building of American Fine Arts Society at 215 West Fifty-seventh street, New York City. The public exhibition opens on Sunday, February 3rd, and will continue until February 23rd, inclusive. There will be a series of public lectures during the course of the exhibition and there will be competition for the usual prizes.

* * *

The American Concrete Institute will hold its annual meeting in Chicago, Ill., February 7 to 9, 1918. Secretary, H. B. Alvord, 27 School street, Boston, Mass.

* * *

The American Institute of Consulting Engineers will hold its annual meeting in New York January 14, 1918. Secretary, F. A. Molitor, 35 Nassau street, New York.

* * *

Alfred Janson Bloor, one of the founders and a life member of the Metropolitan Museum of Art, New York City, and an architect who designed many of New York's largest buildings a half century ago, died at Stonington, Conn., on November 19, aged 89 years. Mr. Bloor was a member of the Willard Architectural Commission in 1886, of the

American Numismatic Society, and of the one-time Royal Society of Portuguese Architects and Archaeologists. He was the author of "Woman's Work in the Civil War" and the translator of poems of many languages. His home in New York was at 38 East Fifty-seventh street for winter seasons and at Cove Lawn, Stonington, in the summer.

* * *

The Retail Lumber Dealers' Association of the State of New York, Paul S. Collier, secretary, Chamber of Commerce Building, Rochester, has announced that the dates for the annual convention of that association have been fixed. The convention headquarters will be the Ten Eyck Hotel, Albany, N. Y., January 30, 1918 and February 1.

* * *

Herbert M. Hale, recently with the Holbrook, Cabot & Rollins Corporation on the Catskill Aqueduct and New York subway work, has become associated with the Turner Construction Company, New York, as assistant to the contract manager. Mr. Hale had been with the Holbrook company for six years, prior to which he was with the New York Rapid Transit Commission and the New York Board of Water Supply.

* * *

The University of Illinois Short Course in Ceramic Engineering will be given January 7-19, 1918. The course will be under the direction of Professor E. W. Washburn, head of the Department of Ceramic Engineering, and Mr. A. V. Bleining, ceramic chemist of the National Bureau of Standards, assisted by Professors C. W. Parmelee and R. K. Harsh, of Illinois, and a corps of lecturers on special topics. The two weeks' course is intended to cover in an elementary and practical manner the scientific principles underlying the practice of clayworking. A common school education will suffice for the work of the course and no tuition fee will be charged. The course is open to all who are interested.

* * *

Estimates on general contract have been taken for the erection of about three hundred dwellings to be built at Arlington, S. I., for the Downey Shipbuilding Corporation, Wallace Downey, president, 120 Broadway, New York, owner. This project is required in order to adequately house the large number of mechanics in the employ of this concern. The buildings have been planned by Simpson & Briscoe, architects, Essex Building, Newark, N. J. They will be two-story houses, built of brick, concrete and stucco, with ground dimensions of approximately 23x23 feet. Modern improvements will be installed for the comfort and convenience of the workmen. These buildings will cost about \$2,000 each.

* * *

The markets for building materials and supplies have generally slowed down to a point of inactivity owing to the dearth of new building operations. As a rule material and supply prices have been firm, and there is every prospect that the market conditions will readjust themselves naturally as soon as there

is a resumption of structural work. Producers of building commodities are all hampered to some extent by the scarcity of fuel and raw materials, and the difficulties of transportation. To some the conditions are acute and mean virtually a suspension of manufacturing until the situation is improved.

* * *

Questions of lumber supply and prices were discussed at a conference of lumber interests and the Federal Commissioners at Washington recently. The meeting was executive, but it is understood that the question of production costs was thoroughly discussed. The committees representing the lumber interests at the Trade Commission hearing were: Southern Pine Bureau—W. H. Sullivan, chairman; R. A. Long, F. W. Stevens, F. L. Sanford, J. L. Kaul, M. B. Nelson, J. H. Kirby, Harry T. Kendall, T. L. L. Temple, W. M. Cady, W. B. Patterson, W. J. Sowers, Charles S. Keith, J. E. Rhodes and L. C. Boyle. Georgia-Florida Bureau—H. R. Swartz, J. R. McLain, M. L. Fleishell, J. E. Graves, E. V. Dunlevie, R. M. Bond, R. H. Paul, Roland Perry and Thomas Aycock. North Carolina Pine Bureau—Gilbert L. Hume, chairman; C. I. Millard, R. J. Clifford, J. L. Camp and A. Mason Cook. Douglas Fir Bureau—J. H. Bloedel, A. L. Paine, George S. Long, Major E. G. Griggs, J. T. Gregory, R. B. Allen and E. T. Allen.

* * *

The labor situation to-day is in somewhat better position than it has been recently. Mechanics for building purposes are plentiful; in fact, there is not sufficient work for all available. Owing to the lack of employment in building construction, as a consequence of the few structures being erected, these men are seeking employment in the new shipyards that are springing up along our shores. The building of ships requires almost the same type of mechanics that are used in the building trades, and so with but slight readjustment to strange conditions these men will be assured of employment while the existing stagnation of building construction maintains, but will be available when their services are again required by the building trades.

* * *

The steadily increasing activities of the factories and plants engaged in the manufacture of war munitions and supplies, and the erection of new shipyards along our coasts, are greatly aggravating the problems incident to properly housing the thousands of employees working in these industries. Important steps have already been taken at certain localities looking toward the relief of the situation, but in a large number of communities the condition is still acute, and immediate action must be taken to house the additional employees. In order to properly house the vast number of skilled mechanics, who, with their families have flocked to the munition plants in a patriotic endeavor to "do their bit," literally thousands of new houses must be erected and millions of dollars expended for the purpose. Nationally prominent housing experts, social welfare workers, architects, engineers, builders and financiers are at present engaged in a study of the numerous difficult problems involved, and it is thought that before the elapse of many days some definite results will be announced that will greatly assist in relieving the intolerable conditions that now exist in some of the leading manufacturing communities of this country.

The "Guide" is published weekly. It comes to your office fifty-two times in a year for five dollars.

The man who doesn't advertise, these days, is forgotten. The world is too busy to look up dead ones.

If your sales-talk is keyed to interest men who build it should occupy space every week in the "Guide," the only building magazine this side of Manhattan Island.

A good sign is a good thing. A good "ad" is a better thing. A good sign and a good "ad," pulling together, the best possible thing.

The man with an order to place doesn't hunt you up in the city directory these days. He hasn't the time. If he can't find you in your trade magazine he can and does find somebody else, and that somebody else books the order.

REPAIR OF THE HISTORIC NEW ORLEANS CUSTOM HOUSE AND WHAT IT HAS REVEALED

Workmen delving into the recesses of the foundation and roof of the ancient custom house at New Orleans have just uncovered some very interesting and surprising facts concerning the queer but thorough methods of early building operations in the South.

How a massive structure erected on planks and logs in the marshy soil of New Orleans could stand for almost three-quarters of a century without a crack or break of any character, and remain to-day as substantial as when it was built, is proving a marvel to modern engineering experts.

This enormous gray building occupies an entire block. On the site where it rests there stood during the early history of this city some kind of a custom house. It is worthy of note, too, that this block was then situated almost on the bank of the Mississippi River. Ever since then the river has been busily engaged in building up the "batture" with silt taken from other points, and the "batture" has grown in width from year to year, until the building to-day stands a full 200 yards away from the river.

The first custom house was burned in the great fire of 1788, and then Governor Miro erected a better structure. Carondelet, coming on the scene later, swept away everything that was on the site and built Fort St. Louis there, covering the entire block.

When, in their turn, the Americans took charge, they had no use for forts, so they demolished Fort St. Louis and built a brick court house in the middle of the block. A bethel stood alongside.

In 1848 both of these were removed, the site, which had been ceded to the United States, was chosen for the custom house, and the work of building began.

The Civil War came on, and it was years before the interior of the building was even approximately finished. General Beauregard had technical supervision of the building—he was then major of engineers—and it is said that the corner-stone was laid by Henry Clay. In fact, the upper floor had not been completed even up to the time of the partial abandonment of the structure a few years ago, when the new post office was occupied by most of the government departments at New Orleans.

The foundations prepared for this huge structure will be of interest to people of to-day, who are accustomed to seeing deep-driven piles made ready for any large building, and steel and reinforced concrete used to strengthen every part. The foundations of the custom house rest on a plank floor seven feet below the sidewalk, on which is a grillage of 12-inch logs, covered by a layer of concrete one foot deep. Yet the building is there. It has sunk only a foot or two—one end a little further than the other. It has not gone down into the earth, as one would have expected

of a massive building erected on such a foundation, in the marshy soil of old New Orleans.

A view of the roof, now in course of repair, offers as many interesting sights to the student of building as the sub-structure or the enormous stones used in the walls. Here the carpenter has torn off the copper covering and revealed a great layer of Southern yellow pine sheathing in almost perfect condition. This sheathing was put down under the original roof of the building, and has performed continuous service since. Here and there a defect in the roofing has permitted water to seep through and cause a small spot to partially rot. With this exception the sheathing is as good to-day as it was when cut from the Southern pine forests of Louisiana before the Civil War.

KILN DRIED WOODS.

The investigations of the Forest Products Laboratory of the Forest Service at Madison, Wis., are proving of practical value now in the solution of war problems. The scientific study made of the drying of woods has developed methods of drying which have been very successful with all the woods tried. The experiments have been made in kilns built at the laboratory and also in commercial kilns. It has been found that Sitka spruce can be kiln dried from the green condition with no more and perhaps less injury to its mechanical properties than by air seasoning. Definite specifications have been prepared for kiln drying spruce green from the saw for airplane construction, and if rigidly adhered to, they will insure kiln dried stock of this species equal to air dried stock. Because the Allied nations had practically exhausted the available supply of air seasoned woods in this country suitable for airplane construction before the United States entered the war, there was a great scarcity of material for airplane manufacture when it became necessary for our Government to enter into this field of construction. Ash is the principal wood used for airplane propellers and tests are now going on to produce definite specifications for the kiln drying of ash from the green log to make it suitable for airplane use.

The study of kiln drying processes made necessary by this emergency will be of valuable assistance to commercial enterprises after the war.

There never was, never will be, a better medium for the man who has something to sell to a given class of buyers than the trade paper whose circulation is limited to that class. Newspapers with their swollen circulations strike at best but a chance target here and there. The trade paper carries your rifle fire to targets exclusively. You can't miss,—if your ammunition's right.

DUCK SHOOTING and COMMON SENSE

When you buy space you buy it with the expectation of getting a reasonable return on your investment. Sure you do. Now where do you stand the best chance of getting that return—in the daily newspaper, whose circulation is confined largely to people with no interest in your product, or in the trade paper, every copy of which goes to a reader directly interested and likely at any minute to need your goods?

If your hobby is large circulation, you will spend your money in the daily—but before you take this step suppose you pause long enough to figure just what percentage of the immense circulation, for which you will pay a fancy rate, is going to go where there is so much as an off-chance of it doing you any real good. FROM THE ANGLE OF THE MAN WHO HAS BUILDING MATERIAL TO SELL, FULLY NINETY PER CENT. OF THE SWOLLEN CIRCULATION OF THE DAILY NEWSPAPER REPRESENTS WASTED AMMUNITION. It is going to readers who are not interested in building material, and are not likely even in a remote sense ever to build or have building done.

IF YOU WANTED TO SHOOT DUCKS YOU WOULD NOT FIRE PROMISCUOUSLY INTO THE AIR, HOPING THAT BY SHEER LUCK SOME MISGUIDED MALLARD MIGHT ACCIDENTALLY WANDER INTO RANGE, OF COURSE YOU WOULDN'T! YOU'D GO WHERE YOU KNEW DUCKS TO BE, and, sighting a covey of 'em, you'd bang away with both barrels. So it is with advertising.

In the daily you stand an off-chance in a thousand of accidentally hitting the eye of some fellow with an interest in your line. In the trade papers, such as the Guide, you bang into a colony of readers who are interested in building above all other human activities.

The moral is—when you go duck shooting do your shooting where you know the ducks to be!

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS; FIRMS FIGURING: CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

Garage, east side of Twelfth street, north of Vine street. Architects, Andrew J. Sauer & Co., 918 Chestnut street, Philadelphia. Owner, Nass Estate, care of architect. Brick, 1 story, 40x60 feet, electric lighting. Plans in progress. Too early for details. Will take bids in about one week.

Apartment House, Forty-fourth and Walnut streets, Philadelphia. Architect, Frank C. Hood, 1620 Spruce street, Philadelphia. Owner, Pasquale C. Teti, Tenth and Catharine streets, Philadelphia. Brick, concrete and steel, 3 stories, 12 apartments, slag roof, hot water heating, electric lighting, tile and marble work, hardwood floors. Plans in progress. Will take bids in about three weeks.

Residence (alt. and add.), St. Martins, Philadelphia. Architects, Duhring, Okie & Ziegler, 1218 Chestnut street, Philadelphia. Owner's name withheld. Stone and timber, 3 stories. Plans in progress.

Garage (alt.), Second and Arch streets, Philadelphia. Architects, Custer & Gill, 304 Market street, Camden, N. J. Owner, Joseph B. McAnally, care of architects. Stone work, mill work, 1 story and basement, 15x51 feet, cement floors, heating extension, electric lighting, fire doors. Architects taking bids, due as soon as possible. Standard Const. Co., 1713 Sansom street, is figuring.

Service Station, Frankford avenue, Philadelphia, \$4,000. Architects, Stearns, Woodnut & Schmohl, Stephen Girard Building, Philadelphia. Owners, Wm. M. France Sons, 1316 Foulkrod street. Brick, concrete and terra cotta, 2 stories, 40x160 feet, slag roof, steam heating, electric lighting, cement floors, gasoline storage system. Owner will build.

Manufacturing Building (alts. and add.), Twentieth and Indiana avenue, Philadelphia. Architects, Stearns, Woodnut & Schmohl, Stephen Girard Building, Philadelphia. Owners, M. L. Bayard & Co., Pennsylvania Building, Philadelphia. Brick, concrete and steel, 3 stories, slag roof, cement floors, steam heating and electric lighting extension. Owner is building.

Theatre, Broad and Lombard streets, Philadelphia. Architects, Lachman & Murphy, Drexel Building, Philadelphia. Owners, The Dunbar Amusement Corp., care of architects. Brick, stone and reinforced concrete, 1 story, basement and gallery, 78x129 feet, slag roof, steam heating, electric lighting, tile, marble and terrazzo work, pine and cement floors, metal lath, fire escapes, ornamental iron work, automatic sprinklers. Architects have received bids.

Residences (8), Walnut Lane and McCallum street, \$28,000. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, John F. Conlin, 5340 Germantown avenue. Brick and stone, 2 stories, 21x34 feet, slate and slag roof, hardwood floors, hot water heating, electric lighting, tile and marble work, stone foundations. Owners taking sub-bids, due December 28th.

Apartment House (alts.), Sixty-first and

Jefferson streets, Philadelphia. Architect, Louis Magaziner, 603 Chestnut street, Philadelphia. Owner, Samuel Englander, Crozer Building, Philadelphia. Consists of interior alterations, plastering, partition work, lighting and heating. Owner taking bids. The following are figuring: Wm. Linker Co., 831 Cherry street, and H. D. Prettyman, 2603 S. Broad street, Philadelphia.

Store Building (alts. and extension), 132-34 Arch street. Architect, Frank E. Hahn, 1112 Chestnut street, Philadelphia. Owner, H. Fliegelman, 35 North Second street. Consists of general interior alterations and rear extension. Brick, 4 stories, 30x60 feet. Plans in progress. Architect will take bids in about two weeks.

Boiler House, Sixty-third and Market streets, Philadelphia. Architect, J. M. Whitham, 607 Bullitt Building, Philadelphia. Owners, Shane Bros. & Wilson Co., on premises. Brick and concrete, 1 story, 33x40 feet, slag roof, concrete floors, electric lighting, rolled steel sash, fire doors. Architect taking bids, due as soon as possible. F. B. Davis, 240 N. Sixteenth street, is figuring (only bidder).

Bank Building (alt.), 325-331 Chestnut street, Philadelphia. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, the Fidelity Trust Co., Fourth and Chestnut streets, Philadelphia. Brick, stone and concrete work, interior and exterior alterations, slag roof, electric lighting, tile, marble and terrazzo work, hollow tile, metal lath. Architect taking bids, due December 28th. H. H. Burrell, 206 South Quince street; F. L. Hoover & Son, 1023 Cherry street; F. A. Havens, 845 North Nineteenth street, and H. E. Baton, 1713 Sansom street, are figuring.

Store and Apartments, Fifty-sixth and Chester avenue, Philadelphia. Architects, Charles W. Bolton & Son, Witherspoon Building, Philadelphia. Owner, Nelson Fry, Nineteenth and Arch streets, Philadelphia. Brick and stone, 3 stories, 35x75 feet, slag roof, hardwood floors (steam heating, electric work, plumbing and tile and marble work reserved). Ar-

chitects taking bids, due December 27th. Thomas C. Trafford, 1613 Sansom street; Sutton & Stephenson, 1317 Washington avenue; Hogg Const. Co., 1634 Sansom street, and Robert E. Lamb Co., 843 North Nineteenth street, are figuring.

Service Station, Philadelphia. Architects, Henon & Boyle, 10 South Eighteenth street, Philadelphia. Owner's name withheld. Brick and stone, 2 stories, 40x100 feet, slag roof, steam heating, electric lighting, rolled steel sash, fire doors, elevators. Plans in progress. Will take bids in about three weeks.

Stations (4), Frankford Elevated, Philadelphia. Architects, Department of City Transit, Bourse Building, Philadelphia. Owners, City of Philadelphia, Department of City Transit, Wm. S. Twining, Director, Bourse Building, Philadelphia. Brick, concrete and steel, 2 stories, 49x22 feet, and 3 stories, 64x30 feet, slag and tile roofs, cement floors, electric lighting, tile, marble and terrazzo work, rolled steel sash, hollow metal sash and skylights, fire and hollow metal doors, iron stairs, ornamental iron work, hollow tile, metal lath, safety treads, roof ventilators, metal ceilings, wire work. Owners taking bids, due December 27th at noon. Edw. Atkins, 249 S. Twenty-fourth street; W. W. Anstine & Co., 1218 Filbert street; F. B. Davis, 240 N. Sixteenth street; Thos. Duff, 4466 Wyoming avenue, Frankford; James Connors, 1317 Arch street, and Holmesburg Concrete Co., Holmesburg, all of Philadelphia, and Connors Bros. Co., 64 West Eighty-eighth street, New York City, are figuring, in addition to those previously reported.

Artillery Firing Range, No. 9485, Frankford Arsenal, Philadelphia. Architect, private plans. Owners, U. S. Government, care of Col. Montgomery, Frankford Arsenal, Philadelphia. Reinforced concrete and brick, 1 story, 19x12 feet, and 1 story, 20x100 feet; range 150 feet, slag and ready roofing, steam heating, electric lighting, concrete floors, kalamein doors, iron stairs, waterproofing, ornamental iron work. Owners have received bids.

Eisen, 928 South Charles street, Baltimore, Md. Brick, 1 and 2 story addition, steam heating, electric lighting, metal bulks, metal ceilings, plumbing. Architect taking bids. Frank Marion, 4 North Caroline street; Owens & Margolius, 422 South Bond street; Frank Kreamer, South Sharp street, (all of Baltimore, Md., are figuring.

Shed for Plate Mill, Sparrows Point, Md. Architect, private plans. Owners, Bethlehem Steel Co., on premises. Reinforced concrete and slag roof on mill and reinforced concrete roof and sides for monitors. Owners taking bids. Consolidated Eng. Co., Calvert Building, Baltimore, Md., is figuring.

Theatre, Hopewell, Va. Architects, Blanke & Zink, Equitable Building, Baltimore, Md. Owner, S. A. Zippas, Central Building, Hopewell, Va. Brick, 1 story, 20x125 feet, slag roof, electric lighting, metal lath, tile work, plumbing. Owners taking bids.

JUST "KEEP A-GOING."

Inc calculable harm can be done by the upsetting of present commercial and business conditions as the result of senseless fear and alarm. While it is always prudent to avoid waste, it is perilous to the stability of the country to have unnecessary, panic-inspired economy and restriction. It is vitally important not to weaken in any way, and perhaps shatter, the industrial structure of the United States by needless curtailments of buying caused by a fear of possible future war conditions. It would be well to a considerable extent to let the future take care of itself, not to borrow trouble, "and just keep a-going."

So far there has been nothing in the business situation of this country that should cause the slightest uneasiness. On the contrary, all the signs appear to be pointing strongly in the right direction. There is every reason to believe that the predictions of business leaders of a coming era of unprecedented commercial and industrial activity will be more than fulfilled. Some lines of business doubtless will be characterized by a greater degree of this activity than others, but there will be scarcely any that will not share in it to some extent. The financial burdens caused by the war, great as they doubtless will be, coming, therefore, during a period of up-tide of prosperity and wealth, will not bear down nearly so heavily as would be the case under ordinary conditions.—"Sheet Metal Workers' Bulletin."

If you want Trap Rock or Slag, any size or grit, we are headquarters for same. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

It's the Long Fire Travel in the Burnham Cosy Comfort Boiler That Makes the Short Coal Bill

If you can keep the hot gases and smoke travelling back and forth inside a boiler long enough to extract the bulk of their heat, and still not make the draft sluggish; it's plain enough that less heat will go up chimney and more heat go into your radiators.

That back and forth action is what we call fire travel. It's this long fire travel in the BURNHAM Cosy Comfort Boilers that has a lot to do with making their short coal bills.

Our Engineering Department is at your service in solving Heating Problems

ARCHITECTS SERVING THE NATION.

"Everywhere members of the Board of Directors of the American Institute of Architects find among the architects of America a great desire to give freely of their ability to serve the nation," said President John Lawrence Mauran, of St. Louis, in an interview published in "The Christian Science Monitor." "I long ago directly offered the Committee on National Defense the free services of the entire Institute for any assignment it might direct. The word came back, however, that the committee could not think of accepting an offer that would entail so great a sacrifice on the part of the members of a profession who might in the course of a few years find the Government their only client and that client a gratuitous one. If the war were for only a few months, our services might be accepted, but not so with a protracted war ahead."

"Then we offered our services in the matter of camouflage and Everts Tracy, of New York, has been made chief of the department of camouflage in the United States Army. I wish I could tell you how very important that work is going to be and how extensively the deception of the enemy, by means of counterfeit presentments of emplaced guns, of railways, of hangars and all that sort of thing, is now being carried on. These are but a few of the ways in which we hope to be useful, but we expect that many others will present themselves."

Don't be discouraged if you make an occasional mistake; if men didn't there wouldn't need to be any claw on a hammer.

Garage, Milnor and Unruh streets, \$500. Erben Harding Co. (O and C), Tacony, Pa. Alterations.

Purpose produces three distinct things: Courage, Self-Reliance and Concentration. These qualities will equip any man for success. Courage is the disposition of heart that inspires him to attempt great things; Self-Reliance is the temper of mind that makes him believe he can accomplish great things; Concentration is the supremacy of will that causes him to achieve great things. When these three qualities are developed to their utmost and combined in equal proportion, we can call them by one name—genius. Genius is not a freak of natural endowment, but a product of conscious evolution.—Doctor Joseph H. Odell.

YOU JUST CAN'T SUIT SOME PEOPLE.

"You just can't suit some people."

"For instance?"

"Fellow had his house picked up by a cyclone and landed over in another county without being damaged."

"And yet?"

"And yet he was sore because it didn't land over a cellar-hole."—"Building Age."

Where the Newspaper "Counts" and Where it "Fails"

There are lines of business that are helped by newspaper advertising, but if you will take the trouble to look them up you will discover that they are lines in which the manufacturer is either dealing direct with the consumer or is selling something which is adaptable to general use.

Safety razors, dental creams, rubber heels belong in this category.

Everybody has use for them. The object of the advertising is confined largely to an effort to emphasize the advantages of certain makes over certain other competing makes. "Ad" men call that kind of advertising "building up a trade-mark" because its primary purpose is to fix a given make in the mind of the consumer to the exclusion of all other makes.

Building-trades advertising is quite a different story.

Here, you are selling something in which only a limited class may be said to have any interest.

If you could dig up a newspaper every copy of which found its way into the hands of an architect, or a builder, or a sub-contractor, or a building owner, it would pay you to hand up a rate of eighty cents an agate line for space.

But you can't.

When you buy space in the newspaper you pay for circulation probably ninety-eight per cent. of which represents, so far as you are concerned, dead waste.

In the building magazine this condition is diametrically reversed. As every copy goes to a reader directly interested in building, you are buying a circulation one hundred per cent. clear business prospects.

And the circulation being smaller by many thousands you are paying a very much easier rate and getting a very much more desirable "position."

You can't doubt this.

It's self-evident.

When the product to be advertised is anything to be used in building your medium is

MODERN CONSTRUCTION WORK IS ACCOMPLISHED BY SCHEDULE.

Prearranged Program Followed Without Variation.

Modern construction of large scope such as the erection of a high class commercial structure or a cantonment similar to the ones recently completed in various parts of the country proceeds according to a preconceived schedule. The importance of this schedule has been demonstrated in all great projects. From the time that the old buildings upon the plot to be improved by a new structure are condemned or the site of the proposed work otherwise prepared, until the work is entirely completed and ready for occupancy, the operation is conducted along this prearranged program.

Every trade interested in the work is informed as to the date its work is to be started and these trades must make all arrangements for permits, hauling, materials and other essentials to accord with the general program. In this manner they are prepared to start operations with the minimum of delay and to complete the work in the stipulated length of time unless some unforeseen circumstances arise. As a general thing there is a margin of safety provided in the schedule for such contingencies.

Oftentimes, the general contractor for a particular structure, in consultation with the architect or engineer, will arrange a graphic chart or program of the proposed progress of the work. This illustrates the dates and duration of every branch of the work throughout the entire job. The chart or schedule includes all materials required, sub-contractors and labor, and from it it is possible to determine at a glance the relation between the chart and the actual status of the work at any moment. Delays that have occurred can be checked and the remainder of the work speeded up so as to have the final operations completed according to the original schedule.

Delays are bound to occur in the progress of any operation frequently due to conditions beyond the control of the general contractor. A program or schedule of this character, however, serves as a continual reminder of the ideal sought for and has a tendency to check delays before they become serious and in general keep things moving in an even channel.—“New York Real Estate Record.”

BUILD NOW.

Here are a few reasons why the cost of building will not come down for a long time, and why owners should build now: As long as the war lasts just that long will high prices rule. After the war the foreign governments and countries will need all, or at least a considerable portion, of our materials to rebuild their ruins. At the present time our big lumber companies have orders for millions of feet of lumber to be delivered after the war to the foreign governments. This alone will keep the price of lumber at high-water mark. Steel will not drop below \$100 a ton, as thousands of ships must be built to replace those destroyed.

The reason there is not more building at the present time is that competition has been entirely too keen the last few years, and contractors are becoming discouraged. They have reached the point where they refuse to figure a job unless there is something in it for them, and we don't blame them. Those following the building line are human like the rest of us, and are entitled to a living. For some time there has been practically no building of residences, with apartment and hotel construction almost as scarce. Residence work will be plentiful again, however, as soon as one grows accustomed to the high prices, as we must, and will, have more new homes. We cannot stop our desires for the modern conveniences of the present day which are to be found in a “home of one's own.”—“San Francisco Architect.”

TRITE SAYINGS.

The largest room in many a house is the room for improvement.

Some owners are like newspapers; they issue extras every few minutes.

A man is like a scaffold; the higher he gets the stronger he needs to be.

This is the Age of Big Business. Maurice Maeterlinck tells us that a bee alone has no intelligence and away from the hive it is lost and undone. So it is with men. We are interdependent and only as we co-operate do we do big and worthy things.

Organization is the keynote of success.

Don't lose your grip. Noah was 600 years old before he knew how to build an ark.

METHODS OF FINISHING CONCRETE.

A Georgia engineer who has had years of experience in concrete construction work, especially concrete roads, decided that the old method of finishing the concrete surface was slow and inefficient. Following his own inclination as to the best method he constructed a roller and tried it out. After a thorough trial it was found very satisfactory and now this method is well on the way to replacing all other methods. The principle employed is to roll the concrete surface lightly. The roller may be from four to six feet long, about eight inches in diameter, and weigh seventy pounds. It is moved across the road by a man standing at the roadside.

When the roller is used for finishing, the concrete is mixed more stiff than that ordinarily used for roads, and the good results obtained by rolling it seem to be due to the fact that the roller compacts the concrete considerably, squeezing out the water and making the material more dense.

Another new method of finishing concrete was recently developed. This is as follows: Two boards, six inches wide and one inch thick, each equal in length to half the width of the pavement, are spliced to make a pointed plank. Each end of the plank is provided with a gauge to keep it at the right elevation of the finished edge of the pavement when moved along the curb. A long handle is attached at each end of the plank and a man is stationed at each of these handles. They push and pull the float over the fresh concrete, finishing the entire width in this way at a single operation. This process is said to eliminate much of the excess water in the concrete and to leave a surface less gritty than that produced by belt finishing.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

To be poor in a wealthy country, to be sick in a good climate, to be inefficient among a progressive people, is a sign of unwise educational methods. Such people were not taught to battle with the world or meet life's emergencies.—Thoreau.

We have pebbles all sizes. Cost less than what you are using. **DAVID FRANCE CO.**, Tasker Street Wharf, Delaware River, Philadelphia.

JUST DO LIKE CAESAR DID.

When Caesar took an eastward ride and grabbed the Gauls of Rome,

What was the first thing that he did to make them feel at home?

Did he increase the people's loads and liberty forbid?

No, he dug in and built good roads—that's what Old Caesar did.

Did Caesar put the iron heel upon the foe-man's breast,

Or did he try to make them feel the Roman's rule was best?

What did he do to make them glad he'd come their midst amid?

He built good roads in place of bad—that's what Old Caesar did.

He built good roads from hill to hill; good roads from vale to vale;

He ran a good roads movement till Rome got all the kale.

He told the folks to buy at home, build roads their hills amid,

Until all roads led up to Rome—that's what Old Caesar did.

If any man would make the town the center of the map,

Where folks will come and settle down and live in plenty's lap;

If any town its own abodes of poverty would rid,

Let it get out and build good roads—just like Old Caesar did.

—"Sentinel," Grenada, Mississippi.

Lots of men don't advertise because they cherish an idea it's too expensive. As a matter of fact, it's the cheapest good investment a man can put his money in, as hundreds of successful men have learned.

PLACE AND VALUE OF THE TRADE PAPER.

"Eloquent speakers who have preceded me have told of the greatness of our American industries, and have rightly given to advertising a large measure of credit for our industrial and commercial supremacy.

They have spoken of the daily and weekly newspapers, the agricultural press, the magazines, the billboards, the street cars, and even the advertising novelties, as the forces that have played an important part in this wonderful upbuilding, but they have wholly missed the greatest force of them all—the trade and technical press of the country."—R. R. Shuman before the annual convention of the Associated Advertising Clubs at Omaha.

SPECIALIZED MEDIA FOR SPECIALIZED THINGS.

It must be evident to any thinking man that the place to advertise commodities or appliances special to any given industry is in the publications that reach that industry and that such advertising, if well written, well displayed and persistently kept up, will not only effect the desired sales, but will build up a permanent good-will asset of inestimable value. . . .—R. R. Shuman, in "Standard Advertising."

Few persons appreciate the enormous cost of advertising a popular product before it obtains popularity. One of the most successful advertisers in the country, whose income reaches hundreds of thousands of dollars annually, told *Leslie's Weekly* that he wasted at least a quarter of a million dollars "before he learned the advertising game." He estimates that he spent this amount on circulars, gaudy lithographs, sign boards, and street car advertising, out of which he received so little benefit, as for he could trace it, that he regarded the expenditure as money pretty nearly wasted.

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth. Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.

Do you get "The Guide" regularly? You should. Better subscribe now, while you think of it, and keep in touch. The man who fails to get and to read carefully the trade paper of his chosen line, is missing a while lot of valuable data that should be at his command.

The man who is "going to do some advertising next year—maybe" gets his advertising in the end in the shape of an obituary.

TRACING A DRAWING WITHOUT TRACING CLOTH.

Tracing cloth is affected by the amount of moisture in the air, and for that reason it is occasionally desirable to transfer a drawing to ordinary paper. This may be accomplished by the use of a glass top table beneath which are suspended several strong (60 to 100-watt) incandescent electric lamps. The strong light passes through the drawing and the superimposed paper on which the tracing is to be made. Where blueprints are desired a thin white paper can thus be used instead of tracing cloth and at less expense.

ARCHITECTURE FIRST OF ALL AN ART.

While it is unquestionable that the architect of to-day is more and more compelled to admit and provide for in his buildings the application of science in manifold directions, there remains the fact that architecture is, first and foremost, an art; that its primary function is the creation of the beautiful, says an English exchange. Beauty in architecture does not exclude but, on the contrary, is inseparable from full provision for the maximum of usefulness in every building. It connotes not only this provision but the expression of full fitness for its purpose in every part of every structure. It is in its highest achievement not the decoration of utilitarianism with a veneer of applied ornament, but the esthetic satisfaction of every necessity in appropriate, logical and pleasing form. Therefore, it is to be hoped that any extension of scientific training that may be introduced into the school of education of our future architects may not exclude such studies as tend to the development of the imagination and the acquisition of facility of expression.

ABSOLUTELY NECESSARY.

We may live without poetry, music and art;
We may live without conscience and live without heart;
We may live without friends, we may live without fads;
But business to-day cannot live without ads.

For every "one" man you can mention who has succeeded without advertising we'll agree to name ten whose greater success has been due to advertising "direct."
Moral Advertise!

We know lots of men who have made money without the aid of advertising, but— they haven't made it since 1876.

The finest automobile will not run when the tank is empty, and the finest space can not pull unless it is filled with copy that grips interest.—"Printer's Ink."

The man "who doesn't believe in advertising" can't understand why the other fellow gets the business.

Our specialty is Portland Cement that will stick and pass the City Department. DAVID FRANCE CO., Tasker Street Wharf, Delaware River, Philadelphia.

AN AWAKENING IN GARAGE ARCHITECTURE.

The main contact point between the modern revolution in transportation and the building industry is the garage. And for many years this contact point was not highly regarded by the building industry. In fact, the common attitude was to ignore it. The garage in its humble origin was too insignificant to command respect. It was classed with various small outbuildings of a farm or estate, tolerated but not recognized.

Then a few architects began to harmonize the lowly housing of the automobile with the stately residence, and it gained an artistic standing on the estate. And commercially the necessity for the public garage grew apace and many were built, just for the rentals they would yield, with no effort at style or distinction, or even special fitness for their purpose. Plain housing or shelter and an avoidance of trouble with the city building inspector seemed to be the main considerations. And to please the patrons little trifling conveniences were provided, one after another. But the garage remained an eyesore, generally speaking, a thing publicly despised as a cheap upstart, but accepted for its unavoidable utility.

But lately the garage has been coming into its own kingdom. It is receiving not only public attention, but the public's more distinguished consideration. Like the carpenter who has become a big general contractor, the garage has acquired a new status. It is being received into the best business circles and its wants are listened to and heeded.

Hereafter the garage can hold its head erect among the best types of business structures. It will unfold many marvels of appropriate use and develop into a unique and most essential building. The enormous increase in the use of automobiles has compelled the building industry to give this final and complete recognition.

The type of public garages under construction to-day are incomparably superior to their predecessors of yesterday. They are built most substantially, often of concrete, metal or masonry, and are equipped with various modern fire preventive devices. They are built several stories or more in height. Access to the upper floors is gained not by means of elevators, but by a system of ramps, extending from the main entrance on a ten or fifteen per cent. grade, built of reinforced concrete. It is thus possible for the renter to speedily and safely bet to, say, the fourth floor of the building with his machine. The ramps are of sufficient width for two cars to pass, and in the center of the ramp longitudinally is a raised edge to prevent the possibility of a collision.

And there are all manner of devices to hasten dispatch. If a man wants his car, the

number is flashed by electric light, so that it will be ready in a very few moments. And all kinds of electric checks and conveniences have been introduced.

Another of the recent acquisitions is an added privacy. The garage is divided into compartments or spaces, perhaps 10 by 22, with cement floors, electric light, steam heat and running water. The renter gets a key to his compartment, and may come and go at any hour without consulting anyone. The compartments in series of four each may be separated from each other by fireproof walls. The owner may take care of his machine or may engage an attendant to look after it. In brief, the garage is gradually taking on the qualities and the conveniences of a good hotel. And architecturally it is acquiring distinction.—"American Contractor."

"WAR AND THE LUMBER INDUSTRY."

Recent reports regarding delays in delivery of material for the construction of wooden ships justify a brief review of the war work performed by the lumber industry, and the Southern lumber industry in particular, says the New Orleans "Times-Picayune."

The Government's call for timbers and lumber has been of a volume wholly without precedent, in this country at least. It has, properly enough, demanded priority treatment in the handling of its emergency business. The lumber industry was not only summoned to produce gigantic quantities of stock, but to ship that stock with the least possible delay. Some idea of its vast volume may be gained from figures submitted in a recent report of the Southern Pine Emergency Bureau, organized to systematize and expedite the delivery of the yellow pine required. Of that wood, produced exclusively by Southern mills, the Government had ordered, at the time of the bureau's report, no less than 778,439,192 feet. Thousands upon thousands of carloads went to the great cantonments. So prompt were the deliveries that several of the cantonments were completed well ahead of the contract time. More than 3,000 cars of ship timber and material had been delivered to the shipyards during the ninety days ended October 13 last. Other millions of feet were moved simultaneously to the national guard and aviation camps and to army warehouse and depot centers.

Yellow pine is the leading Southern wood in point of production and the demands upon its manufacturers are naturally heavier than the demand upon the manufacturers of other Southern woods. But the latter have done their bit very creditably in supplying the war needs of their Government and its allies. Southern lumbermen, with very few exceptions, have "carried on" efficiently in the face of a good many obstacles. It may be worth mentioning in this connection that the Government authorities, after careful in-

vestigation of production costs, voluntarily increased the average prices paid for yellow pine ship material, whereas the prices of certain other materials—notably steel and coal—were sharply reduced after similar investigations.

A CHINESE APARTMENT HOUSE.

Some interesting particulars regarding the apartment house as it exists in China were given out a short time ago by Mr. Thomas W. Clarke, a construction engineer, recently returned from the Orient. Referring to a photograph which he had, he stated that the apartment house shown was more than 400 years old and housed about 400 families.

"It is the chief building of a village in the southern end of the Fu-Ken Province, South China, about 300 miles from Hong Kong. Built in a perfect circle, it is five stories high and is massively constructed of stone and brick. Its design shows that it was built as much for protection as for dwelling purposes. There are no windows on the outside, and enemies would have to scale the walls before they could harm those within. There is only one entrance, a very strong gate, capable of standing siege for a long time unless attacked with modern weapons. Undoubtedly the house was built to withstand the pirates and roving bands of robbers that terrorized Fu-Ken Province in the old days.

"The outside wall is about 50 feet high and about 550 feet in diameter. The interior court is 400 feet across, paved with great stone blocks. Right in the center of the yard is the communal water supply, a large cistern which is fed by the water from the roof running through terra cotta drains.

"There are no modern conveniences, and the various tenants reach their dwellings by way of bamboo ladders.

"The apartments are 12 feet wide, and the floors are made of rough-hewn lumber laid over poles of Chinese fir.

"The roof is made of heavy terra cotta tiles laid so that the edges overlap, and it is weatherproof. Furthermore, the tiles afford perfect shelter from the sun, which is hot in South China, and the top floor apartments are as cool as those lower down. The whole structure is weatherproof.

"Every apartment has its own veranda. These run around the whole interior of the house and face on the courtyard, which often serves as a market place when merchants are allowed to come in from near-by villages. The courtyard is also the meeting place of all the residents of the apartment house, and there everything of interest to the community is discussed.

"The four hundred families include considerably more than 1,000 persons, and they have a government of their own. It is not unlike the much advertised form of commission government adopted in some of the towns and cities in this country."
